QUARTERLY RETURN

OF

MARRIAGES, BIRTHS, AND DEATHS

REGISTERED IN THE DIVISIONS, COUNTIES, DISTRICTS, AND SUB-DISTRICTS OF

ENGLAND AND WALES;

WITH TABLES SHOWING BIRTHS, DEATHS, AND NOTIFIED CASES OF INFECTIOUS
DISEASE IN CERTAIN LARGE TOWNS.

~~~~~  
Published by Authority of the Registrar-General.  
~~~~~

Printed under the Superintendence of His Majesty's Stationery Office,
AND SOLD BY WYMAN AND SONS, LTD., FETTER LANE, E.C.

No. 229.] **Marriages**—October, November, December, 1905. [Price 9d.
Births and Deaths—January, February, March, 1906.

*General Register Office, Somerset House,
26th April, 1906.*

UNITED KINGDOM.

The POPULATION of the UNITED KINGDOM in the middle of 1906 is estimated at 43,659,121 persons; that of England and Wales at 34,547,016, that of Scotland at 4,726,070, and that of Ireland at 4,386,035.

In the United Kingdom 296,741 *births* and 181,635 *deaths* were registered in the three months ended 31st March, 1906. The natural increase of population was, therefore, 115,106. The number of *persons married* in the quarter ended 31st December 1905 was 170,114.

The birth-rate in the United Kingdom in the *first* quarter of 1906 was 27·6, and the death-rate 16·9, per 1000 of the estimated population. The marriage-rate in the *fourth* quarter of 1905 was 15·6 per 1000.

The facts, in detail, concerning Scotland and Ireland, are recorded in the Quarterly Returns of the Registrars-General for those parts of the United Kingdom.

Passenger Movement.

According to Returns issued by the Board of Trade, it appears that during the three months ended 31st March last, 98,955 passengers left the United Kingdom for places out of Europe. Persons of British origin numbered 54,747, of whom 39,775 were English, 9,534 were Scottish, and 5,438 were Irish. Persons of Foreign origin numbered 42,055, whilst the nationality of 2,153 others was not distinguished.

Compared with the numbers in the corresponding period of the previous year, the proportion of English passengers showed an increase of 17·8 per cent., that of Scottish an increase of 52·3 per cent., and that of Irish a decrease of 38·0 per cent.

ENGLAND AND WALES.

This Return comprises the BIRTHS and DEATHS registered in the 2,039 registration sub-districts of England and Wales during the three months ended 31st March 1906; and the MARRIAGES in 15,583 churches or chapels, in 14,401 registered places of worship unconnected with the Established Church, and in 635 Superintendent Registrars' Offices, during the three months ended 31st December 1905.

Marriages.

During the *fourth* quarter of 1905 the marriages of 143,412 persons were registered, being equal to an annual rate of 16·7 persons married per 1000 of the estimated population, against an average rate of 17·5 per 1000 in the fourth quarters of the ten years 1895–1904.

Among registration counties with populations exceeding 100,000 persons the lowest marriage-rates were 13·2 in Herefordshire, 13·8 in Shropshire, 14·0 in Buckinghamshire, and 14·4 in Cheshire; the highest rates were 18·2 in Dorsetshire, 18·3 in Suffolk, 18·4 in London, 19·2 in Warwickshire, 19·3 in Norfolk, 19·7 in Cambridgeshire, and 21·2 in Carmarthenshire.

Births.

The births registered in the *first* quarter of 1906 numbered 237,396, and were in the proportion of 27·9 annually per 1000 of the population; this is the lowest birth-rate recorded in any first quarter since civil registration was established. The mean rate in the ten preceding first quarters was 29·2. In registration counties with populations exceeding 100,000 persons the lowest birth-rates during the quarter were 21·8 in Sussex, 22·0 in Cornwall, 22·7 in Berkshire and in Somersetshire, 22·9 in Carnarvonshire, and 23·0 in Northamptonshire; the highest rates were 31·4 in Northumberland, 31·5 in Carmarthenshire, 32·2 in Staffordshire, 35·2 in Glamorganshire, 35·4 in Durham, and 37·1 in Monmouthshire.

In 76 great towns the birth-rate averaged 28·7 per 1000, ranging from 16·4 in Hastings, 16·7 in Hornsey, 17·4 in Bournemouth, and 19·2 in Halifax, to 36·0 in Middlesbrough, 36·2 in Stockton-on-Tees, 36·5 in Merthyr Tydfil, and 39·5 in Rhondda. In 142 smaller towns the mean birth-rate was 27·3 per 1000, whilst in the remainder of England and Wales, excluding the 218 chief towns, it was 27·1.

Natural Increase of Population.

The natural increase of population in England and Wales during the quarter, by excess of births over deaths, was 96,931, against 96,758, 87,166, and 89,740 in the first quarters of 1903, 1904, and 1905 respectively.

Prices and Pauperism.

The average price of wheat per quarter, which had been 30s. 11d., 29s. 5d., and 27s. 11d. respectively in the preceding three quarters, was 28s. 6d. last quarter. The mean wholesale prices per lb. of British beef and mutton at the Metropolitan Cattle Market were:—of inferior beef, 4½d.; of prime beef, 6½d.; of inferior mutton, 7d.; of prime mutton, 9½d. Compared with the average prices in the preceding three months, the

mean price of inferior beef remained unchanged, while that of prime beef showed a decrease of $\frac{1}{8}d$. The mean prices of inferior mutton and of prime mutton showed respectively an increase of $1\frac{1}{2}d$. and of $\frac{3}{4}d$. The average price in the London Market of sea-borne coal put in barge from the collier in the Thames was 15s. 8d. per ton, against 16s. 8d. and 14s. 11d. per ton in the first quarters of 1904 and 1905 respectively. The mean price of Consols was 90l. 2s. 8d., having been 88l. 17s. 0d. in the preceding quarter. The minimum annual rate per cent. of discount charged at the Bank of England during the quarter was 4l., having continued at that figure since 28th September 1905.

The average number of paupers (exclusive of lunatics in asylums, and of vagrants) relieved in England and Wales on the last day of each week in the quarter was 815,990; of whom 261,475 received in-door, and 554,515 out-door, relief. The proportion of the population in receipt of poor-law relief was 23·6 per 1000, against 22·8 and 24·0 per 1000 respectively in the first quarters of 1904 and 1905.

Meteorology.

A detailed report on the weather over the United Kingdom in the past quarter, with a table of Monthly Results for a number of stations in England and Wales, prepared in the Meteorological Office, will be found on pp. 72-89.

Regarded as a whole, the weather was at first mild and wet but afterwards much colder, and in the eastern parts of the country much drier. In the earlier half of March the thermometer was again above the average, but in the latter half there was a renewal of cold weather, with a general deficiency of rain. Throughout the quarter the amount of bright sunshine was almost always in excess of the average, especially in the western and southern districts. Thunderstorms were unusually prevalent for the time of year, and were in some cases of considerable severity.

In January the weather was influenced by numerous cyclonic disturbances, the majority of which travelled in an Easterly direction along our extreme northern coasts, and thence on to Scandinavia. The prevailing winds were therefore South-westerly or Westerly and the weather was generally mild, the only spell of sharp frost occurring between the 22nd and 24th, when an anticyclone moved slowly across the United Kingdom from the north-westward. Rain was frequent, the heaviest falls occurring in the south of England on the 2nd, and again on the 16th and in various parts of Wales on the 5th. Thunderstorms were experienced over our southern counties on the 5th, 9th and 10th and in some portions of Wales and Lancashire on the 13th.

In February the weather remained very changeable, but was much colder and drier than in January, the wind being as a rule from some point between West and North. Frost occurred at frequent intervals, the sharpest being experienced either between the 4th and 6th or between the 22nd and 24th. On the former occasion the sheltered thermometer fell below 20° in several parts of our midland and southern counties. On the 8th of the month a sharp thunderstorm, or line of storms, travelled south-eastwards across England from Lancashire to our south-eastern coasts, the barometer at the time showing sudden and remarkable oscillations.

March opened with a continuance of cold changeable weather, but after the first few days a mild South-westerly wind set in, and on the 6th and 7th the thermometer rose to an unusually high level for the time of year. In the rear of a deep cyclonic disturbance which travelled across these Islands

on the 11th a strong gale from the North-west sprang up, and on the 12th an abnormally high tide was experienced along our eastern and south-eastern coasts. The gale was followed by a severe frost, the sheltered thermometer on the nights of the 12th or 13th falling below 20° at many places in the northern half of the country. During the remainder of the month the wind remained chiefly in a Northerly quarter and the weather cold and changeable with frequent showers of hail, snow or sleet, and with occasional sharp touches of frost.

The *mean temperature* of the quarter was above the average in all districts excepting England North-west, where the value was slightly below the normal. The excess was as a rule very small, but in the London district it amounted to one degree. Over the country generally the highest readings occurred on March 6th or 7th, but in the western districts they were registered more commonly on March 17th. On each of those occasions the thermometer rose to between 60° and 65° in nearly all parts of England, and on March 7th it reached 67° at Cambridge and Norwich. The lowest temperatures of the quarter occurred on various dates, but in all districts excepting the Channel they were registered at some time in February or March. The sharpest frost of all appears to have occurred between the 13th and the 14th of March, when the sheltered thermometer fell to 12° at Carlisle, to 15° at Morpeth (Cockle Park), and below 20° in many other parts of our northern counties.

The *rainfall* measured in London amounted to 6·7 ins. and exceeded the average by as much as 35 per cent. An excess was reported in all other parts of England; in the eastern district the total quantity was 53 per cent. more than the normal, while over our southern counties as a whole the excess amounted to nearly 70 per cent. The number of days with a measurable quantity of precipitation ranged from 67 in the Channel Islands and 63 in England South to 54 in England Central and to 49 in England North-east. At some time during the quarter falls exceeding one inch in a day were recorded in most districts, the largest of all being 1·9 ins. at Portsmouth on January 2nd, and 1·5 ins. at Falmouth on February 22nd.

The duration of *bright sunshine* in London amounted to 219 hours, being 53 hours in excess of the average, but less than one fourth of the possible duration. In most other parts of the country the excess was also large, but in England East it did not amount to more than 13 hours. The sunniest week in the quarter was that ending March 10th, when 50 per cent. of the possible duration was recorded in England East and the Channel District.

Deaths.

The deaths registered in England and Wales last quarter numbered 140,462, and were in the proportion of 16·5 annually per 1000 persons living, the average rate in the ten preceding first quarters having been 18·7. In registration counties with populations exceeding 100,000 persons, the death-rates ranged from 13·6 in Middlesex, 13·7 in Northamptonshire, 13·9 in Essex, 14·5 in Kent, 14·6 in Buckinghamshire, and 14·7 in Surrey, to 17·8 in Warwickshire and in Durham, 17·9 in Cumberland, 18·2 in the North Riding of Yorkshire, 18·4 in Monmouthshire, and 18·6 in Denbighshire.

The 140,462 registered deaths included 72,458 of males and 68,004 of females, the death-rate among males being 17·6, and that among females 15·4, per 1000 of the estimated populations of the respective sexes. Compared with the average for each sex in the ten preceding first quarters the

death-rate of males showed a decrease of 2·1, and that of females a decrease of 2·4, per 1000 living. Out of equal numbers living, the deaths of males were to those of females as 114 is to 100, the proportion in the first quarters of the ten preceding years having been 111.

Urban and Rural Mortality.

In 76 great towns, in each of which the population at the census of 1901 exceeded 50,000, and of which the aggregate population in the middle of 1906 is estimated at more than fifteen and three-quarter millions of persons, the death-rate was 16·6 per 1000 living, or 0·1 above the death-rate in the whole country. The rates in the several towns ranged from 10·2 in Hornsey, 10·7 in Kings Norton, 10·9 in East Ham, 11·1 in Walthamstow, 11·3 in Northampton, 11·6 in Willesden, and 11·8 in Leyton, to 19·6 in Warrington, 20·0 in Swansea, 20·1 in Merthyr Tydfil, 21·3 in Liverpool, and 22·5 in Preston.

In 142 smaller towns, with populations ranging between 20,000 and 50,000 at the census of 1901, and with an aggregate population estimated at more than four and three quarter millions of persons in the middle of 1906, the death-rate was 15·2 per 1000 living, or 1·4 per 1000 below the rate in the great towns.

In the remainder of England and Wales, with an aggregate population estimated at more than thirteen and three-quarter millions of persons, of whom about six and a quarter millions live in small towns, and more than seven and a half millions in rural districts, the death-rate was 16·9.

Mortality at Different Ages.

Of the 140,462 deaths registered last quarter, 29,845 were those of infants under one year of age, 61,329 those of persons aged between one year and sixty years, and 49,288 those of persons aged sixty years and upwards.

Infantile mortality, measured by the proportion of deaths under one year of age to registered births, was 126 per 1000, the average in the ten preceding first quarters having been 139. Among registration counties with populations exceeding 100,000 persons, the lowest proportions per 1000 births were 92 in Oxfordshire, 97 in Middlesex, 98 in Wiltshire, 101 in Essex, 102 in Cornwall, and 103 in Buckinghamshire. The highest proportions were 149 in Monmouthshire, 150 in Glamorganshire, 154 in Nottinghamshire, 160 in Carnarvonshire, 163 in Leicestershire, and 176 in Denbighshire.

In the 76 great towns infantile mortality averaged 128 per 1000 births, being 2 per 1000 above the proportion in England and Wales as a whole. Among the several towns the lowest proportions were 87 in Huddersfield, 88 in East Ham, 96 in Willesden and in Hornsey, and 98 in Leyton; the highest were 175 in Rhondda, 176 in Nottingham, 179 in Walsall, 193 in Preston, and 202 in Leicester. Among the 142 smaller towns infantile mortality averaged 127 per 1000 births, ranging from 60 in Enfield, 63 in Aldershot and in Worthing, 66 in Edmonton, 68 in Salisbury, and 69 in Eastbourne to 200 in Widnes, 202 in Todmorden, 206 in Hereford, 210 in Bilston, 215 in Hartlepool, and 238 in Aberdare. Excluding these 218 towns, infantile mortality in the remainder of England and Wales was in the proportion of 122 per 1000 births.

The mortality in England and Wales among persons aged between one year and sixty years was at the annual rate of 8·0 per 1000 of the estimated population at this group of ages, being 1·3 below the mean rate in the ten preceding first quarters. In the 76 great towns the mean mortality at this age-group was 8·6 per 1000, ranging from 4·4 in Kings Norton, 4·7 in Hornsey, 5·2 in Handsworth (Staffs), 5·3 in Leyton and in Northampton, 5·5 in Willesden, and 5·7 in Walthamstow, to 10·5 Warrington, 10·6 in Sunderland, 10·9 in Merthyr Tydfil, 11·7 in Preston, and 12·1 in Liverpool. In the 142 smaller towns the mortality at this age-group averaged 7·2 per 1000.

Among persons aged sixty years and upwards the mortality was at the annual rate of 78·1 per 1000 of the estimated population at this group of ages, the mean rate in the ten preceding first quarters having been 84·0. In the 76 great towns the mean mortality at this age-group was 80·9 per 1000, the lowest rates being 56·5 in Wallasey, 58·2 in West Bromwich, 59·6 in Leicester, 62·8 in Kings Norton, 63·4 in Northampton, and 63·7 in Walthamstow; and the highest, 100·1 in Middlesbrough, 101·1 in Warrington, 101·8 in St. Helens, 102·3 in Preston, and 102·6 in Hanley. In the 142 smaller towns the rate averaged 77·0 per 1000.

Compared with the mean rates in the ten preceding first quarters, the mortality of infants under one year of age showed a decrease of 9·4 per cent., that of persons between one year and sixty years of age a decrease of 14·0 per cent., and that of persons aged sixty years and upwards a decrease of 7·0 per cent.

Mortality from certain Epidemic Diseases.

The 140,462 deaths from all causes include—

2,736	that were attributed to	whooping-cough,
2,283	"	"
1,669	"	"
1,126	"	"
934	"	"
570	"	"
3	"	"
		measles,
		diphtheria,
		diarrhoea,
		scarlet fever,
		"fever,"
		small-pox.

Thus, to the above-mentioned epidemic diseases in the aggregate, 9,321 deaths were referred last quarter, being in the proportion of 1·10 per 1000 of the estimated population, or 0·40 per 1000 less than the average proportion in the corresponding quarters of the previous ten years.

The rates of mortality from these diseases were severally below the decennial averages.

Whooping-cough accounted, last quarter, for 2,736 deaths, and for a death-rate equal to 0·32 per 1000 annually, which is lower by 0·08 per 1000 than the average rate in the ten previous corresponding quarters. In three of the counties no deaths were registered from this disease; in other counties with populations exceeding 100,000 persons, the death-rate rose to 0·47 in Durham and in Berkshire, 0·48 in Monmouthshire, 0·53 in Devonshire, 0·70 in Warwickshire, and 0·83 in Leicestershire. In the 76 great towns, whooping-cough caused an average death-rate of 0·41 per 1000 living. Seven of these towns were free from mortality from this disease throughout the quarter, but the death-rate therefrom was equal to 0·96 in Reading, 0·98 in Aston Manor, 1·12 in Smethwick, 1·22 in Plymouth, 1·35 in West Bromwich, 1·45 in Handsworth (Staffs.), and 1·50 in Leicester. In the 142 smaller towns, the average death-rate from whooping-cough was 0·24 per 1000; the disease

being especially fatal in Ebbw Vale, Hereford, Ramsgate, Dewsbury, Rowley Regis, and Oldbury. In the remainder of England and Wales, whooping-cough caused an average mortality equal to 0·25 per 1000 annually. Among registration sub-districts outside the 218 chief towns, whooping-cough was exceptionally fatal in Witley, Harwich, and Alnwick.

Measles was returned as the cause of death in 2,283 instances, corresponding to an annual rate of 0·27 per 1000 of the population, which is below the average rate in the first quarters of the preceding ten years by 0·13 per 1000. Eight of the counties of England and Wales were free from measles fatality throughout the quarter recently ended; the counties with populations of more than 100,000 persons showing the highest fatality from this disease were Northumberland, where the annual rate was equal to 0·38, Lancashire 0·39, Middlesex 0·57, London 0·58, Merionethshire 0·63, and Denbighshire 0·79 per 1000 of the respective populations. In the 76 great towns measles caused an average mortality of 0·41 per 1000. In 30 of these towns no deaths from this disease were registered during the quarter. The highest death-rates were 0·75 in Swansea, 0·84 in Newcastle on Tyne, 0·88 in Wolverhampton, 1·20 in Blackburn, 1·24 in Tottenham, 1·26 in Leeds, 2·46 in Bury, and 2·93 in Preston. In the 142 smaller towns, measles was fatal on the average to 0·17 annually per 1000 persons living, and among these towns showed exceptional fatality in Edmonton, Hartlepool, Barking, Middleton, Acton, and Bilston. In the remainder of England and Wales the average measles death-rate was 0·14 per 1000 of the population. Among registration sub-districts outside the 218 chief towns, measles was especially fatal in Duxford, Great Torrington, Fleetwood, and Ruabon.

Diphtheria (exclusive of *croup* unless stated to be *membranous*) was returned last quarter as the cause of 1,669 deaths, a number equal to an annual rate of 0·20 per 1000 living, which is below the average rate in the ten previous corresponding quarters by 0·07 per 1000. Two of the counties were entirely free from fatal diphtheria throughout the quarter. Among counties with populations exceeding 100,000 persons the highest death-rates from this disease were in Lincolnshire 0·30 per 1000, Herefordshire 0·33, Carmarthenshire 0·38, and the East Riding of Yorkshire 0·49. The average death-rate from diphtheria in the 76 great towns was equal to 0·21 per 1000 of their aggregate population. In four of these towns no deaths from this disease occurred in the course of the quarter. The great towns in which diphtheria showed the highest fatality were the following:—West Ham where the death-rate was equal to 0·39, East Ham 0·40, St. Helens 0·48, Derby 0·58, Hull 0·70, and Merthyr Tydfil 0·96 per 1000 of the several populations. In the 142 smaller towns the mortality from this disease averaged 0·19 per 1000, the rate being highest in Barking, Hereford, Chester, Wallsend, Lincoln, and Todmorden. In the remainder of England and Wales, diphtheria was fatal in the average proportion of 0·18 per 1000 living.

Diarrhœa was the assigned cause of 1,126 deaths last quarter, equal to an annual mortality of 0·13 per 1000, which is lower by 0·03 per 1000 than the decennial average rate for the first quarter of the year. Among counties with populations exceeding 100,000 persons the highest rates from this disease last quarter were 0·18 in Warwickshire, in Cumberland and in Monmouthshire, 0·20 in Staffordshire, 0·24 in Dorsetshire, and 0·27 in the North Riding of Yorkshire. No deaths from diarrhœa were returned from three of the counties. In the 76 great towns the average death-rate from diarrhœa was 0·14 per 1000; no deaths were returned in seven of these towns; the rate was highest in the following towns:—Rochdale 0·28, Barrow in Furness 0·33, Walsall 0·34, Great Yarmouth 0·38, Burnley 0·51, and Middlesbrough 0·64. In the 142 smaller towns diarrhœa was fatal on the

average to 0·12 per 1000 of the population, and caused the highest mortality in Middleton, Abertillery, and Longton. In the remainder of England and Wales the death-rate from diarrhoea averaged 0·12 per 1000.

Scarlet fever accounted last quarter for the deaths of 934 persons, and for a death-rate of 0·11 per 1000 living, or 0·02 per 1000 less than the decennial average rate for the first quarter. Ten of the counties of England and Wales were free from scarlet fever mortality. Among counties with populations exceeding 100,000 persons, the highest county rates were 0·14 in Cheshire, 0·17 in Middlesex, 0·19 in Northamptonshire and in Lancashire, and 0·23 in the West Riding of Yorkshire. In the 76 great towns scarlet fever accounted for an average mortality equal to 0·14 per 1000 annually. No deaths from this disease were recorded in eighteen of these towns. The highest scarlet fever death-rates were 0·31 in East Ham, 0·43 in Oldham, 0·44 in Liverpool, 0·48 in Blackburn, 0·52 in Sheffield, and 0·55 in West Hartlepool. In the 142 smaller towns scarlet fever was fatal in the average proportion of 0·08 per 1000 living, and caused the highest mortality in Glossop and Fenton. In the remainder of England and Wales this disease caused an average death-rate equal to 0·09 per 1000 living.

'Fever' (including the three chief forms—*typhus*, *enteric fever*, and *'pyrexia'* of uncertain origin) was the registered cause of 570 deaths last quarter, equal to an annual death-rate of 0·07 per 1000 of the population, or 0·06 per 1000 less than the average rate in the first quarters of the previous ten years. No deaths from fever were returned from ten of the counties; among counties with populations exceeding 100,000 persons, the highest county fever rates were 0·11 in Lancashire and in Buckinghamshire, 0·12 in Staffordshire, 0·13 in Nottinghamshire, and 0·15 in Durham. In the 76 great towns fever caused an average mortality equal to 0·07 per 1000 annually. In 17 of these great towns no deaths from fever occurred; the towns with the highest fever death-rates were Salford 0·19, Bolton 0·20, Preston and Merthyr Tydfil 0·21, Hanley 0·24, and West Bromwich 0·35, per 1000 of the respective populations. In the 142 smaller towns fever caused an average mortality equal to 0·06 per 1000 annually, and was most fatal in Tipton, Dudley, and Mansfield. In the remainder of England and Wales, the death-rate from fever averaged 0·07 per 1000.

Small-pox was fatal to 3 persons last quarter, as compared with 73, 32, 4, and 4 in the four quarters immediately preceding. Of these deaths there belonged to Plymouth, Bristol, and South Shields, one apiece.

Violent Deaths.

The deaths in England and Wales that were referred to different forms of violence, either accidental or otherwise, numbered 4,800 last quarter, and corresponded to an annual rate of 0·56 per 1000 of the population, against an average of 0·62 in the ten preceding first quarters. In registration counties with populations exceeding 100,000 persons, the lowest death-rates from violence were 0·24 in Wiltshire, 0·30 in Cambridgeshire, 0·34 in Bedfordshire and in Norfolk, 0·37 in Berkshire, and 0·38 in Buckinghamshire and in Carmarthenshire; the highest rates were 0·67 in Durham and in Northumberland, 0·68 in the North Riding of Yorkshire, 0·73 in Shropshire, 0·76 in Denbighshire, and 0·87 in Glamorganshire. In the 76 great towns the mean rate was 0·59 per 1000 living; among the several towns the rate was only 0·22 in Kings Norton, 0·24 in Hastings, 0·25 in Reading and in Handsworth (Staffs.), 0·27 in Norwich, and 0·28 in East Ham; but it rose to 0·89 in Walsall and in Tynemouth, 0·96 in Bury, 0·97 in St. Helens, 1·01 in Rhondda, and 1·07 in Merthyr Tydfil.

Certification of Causes of Death.

Of the 140,462 deaths registered in England and Wales last quarter, the causes of 128,539, or 91·5 per cent., were certified by registered medical practitioners, and the causes of 9,584, or 6·8 per cent., by coroners after inquest; whilst the causes of the remaining 2,339, or 1·7 per cent., were not certified, the average proportion of uncertified deaths in the ten preceding first quarters having been 2·0 per cent. Among registration counties with populations exceeding 100,000 persons the proportion of uncertified deaths was less than 1 per cent. in London, Surrey, Sussex, Middlesex, Devonshire, Gloucestershire, Cheshire, the East Riding of Yorkshire, and Monmouthshire, but it reached 3·1 in Shropshire and in Denbighshire, 3·6 in Durham, 3·9 in Derbyshire, 4·3 in Herefordshire, and 4·4 in Carnarvonshire. In the 76 great towns the mean proportion of uncertified deaths was 1·2 per cent.; but whilst no uncertified deaths were registered in Croydon, Hornsey, West Ham, East Ham, Walthamstow, Brighton, Southampton, Ipswich, Great Yarmouth, Plymouth, Devonport, Derby, Stockport, Birkenhead, Oldham, York, Stockton-on-Tees, Cardiff, and Swansea, the proportion per cent. rose to 4·3 in Liverpool, 4·7 in Rotherham, 4·8 in South Shields, 5·3 in Warrington, 5·5 in Burton-on-Trent, 6·9 in St. Helens, and 7·0 in Gateshead.

Inquests.

Inquests were held in England and Wales concerning 9,584, or 6·8 per cent. of the total deaths, the mean proportion in the ten preceding first quarters having been 6·4 per cent. In the 76 great towns the proportion of inquest cases was 8·2 per cent., ranging from 3·2 in Preston, 3·3 in Barrow-in-Furness, 3·4 in Handsworth (Staffs.), and 3·6 in Kings Norton, to 10·4 in London, 10·6 in Tottenham, 11·2 in Southampton, 11·4 in Hull, and 11·8 in Croydon.

Deaths in Public Institutions.

The total deaths registered in England and Wales include 25,454, or 18·1 per cent., that occurred either in workhouses, in hospitals, or in lunatic asylums, the mean proportion of deaths in such institutions in the ten preceding first quarters having been 15·1 per cent. In the 76 great towns the deaths in public institutions averaged 24·1 per cent. of the total deaths, the lowest percentages in the several towns being 2·6 in Rhondda, 3·4 in Smethwick, 3·6 in Kings Norton, and 4·8 in Aston Manor; and the highest 25·1 in Croydon, 26·4 in Brighton, 26·6 in Manchester, 29·6 in Liverpool, and 37·2 in London.

LONDON.

The figures in Tables V. and VI. include the deaths of Londoners in the Metropolitan workhouses, hospitals, and lunatic asylums situated outside the County of London, but exclude the deaths of persons not belonging to London that occurred in the London Fever Hospital, in the Metropolitan Asylums Board Hospitals, and in the Middlesex County Lunatic Asylum, within the County of London. The death-rate, thus computed, was equal to 16·6 annually per 1000 living (Table VI.). If, however, all the deaths of non-Londoners that occurred in hospitals or other public institutions in London be excluded, the death-rate will not exceed 16·0 per 1000. Table X. shows the death-rate in London after

this further correction has been applied; and, since the registered mortality in many London districts is seriously affected by the deaths in hospitals and other public institutions, the death-rates in the Metropolitan Boroughs are also shown, corrected by the distribution of all deaths in public institutions to the Boroughs to which the deceased persons had belonged.

EDINBURGH, GLASGOW, DUBLIN, AND BELFAST.

The annual birth and death-rates per 1000 living in these towns last quarter were as follows:—

	Birth-rate.	Death-rate.
Edinburgh	22·1	17·3
Glasgow... ..	29·6	18·9
Dublin	29·4	22·9
Belfast	32·5	23·2

COLONIAL AND FOREIGN CITIES.

The Registrar-General has been favoured with weekly returns of vital statistics by the authorities of twenty-eight of the principal Colonial and Foreign Cities. From these a summary has been constructed for the past quarter (Table XI.). Excluding the Indian cities, the highest and lowest annual birth and death-rates during the first quarter of 1906 were as follows:—

BIRTH-RATES.

	Highest per 1000 living.		Lowest per 1000 living.
Trieste	35·6	Paris	19·4
Bucharest	30·5	Brussels	19·5
Breslau	30·4	Toronto	19·6
Munich	29·4	Prague	23·0
Copenhagen	27·9	Berlin	24·3
Christiania	27·7	Antwerp	24·5
		Stockholm	24·6
		London	27·8

DEATH-RATES.

	Highest per 1000 living.		Lowest per 1000 living.
Trieste	28·1	Christiania	13·6
St. Petersburg	26·4	Toronto	14·0
Moscow	26·4	Chicago	14·4
Bucharest	25·1	Antwerp	14·6
Rome	21·7	Stockholm	14·8
Philadelphia	21·4	Amsterdam	11·9
		London	16·6

Small-pox caused 19 deaths in St. Petersburg, 17 in Moscow, 8 in Rio de Janeiro, and 7 in Paris.

Measles was most fatal in proportion to population in St. Petersburg, Philadelphia, Amsterdam, Rome, New York, Paris, and Buda-Pesth; *scarlet fever* in St. Petersburg, Stockholm, Moscow, Buda-Pesth, Bucharest, and Chicago; *diphtheria* in New York, St. Petersburg, Christiania, Philadelphia, Moscow, and Trieste; *whooping-cough* in Copenhagen, Breslau, and Munich; "*fever*" in Philadelphia and St. Petersburg; and *diarrhœal diseases* in St. Petersburg, Moscow, Munich, Prague, and Antwerp.

INDIAN CITIES.—The death-rate was equal to 39·6 per 1000 in Calcutta, 52·9 in Madras, and 55·9 in Bombay. *Small-pox* caused 1,555 deaths in Calcutta, 389 in Madras and 121 in Bombay; *measles* caused 269 deaths in Bombay and 259 in Madras. Under the heading "*fever*" 4,056 deaths were classed in Bombay, 2,415 in Calcutta, and 1,548 in Madras, including respectively, 2,843, 679, and 55 deaths from *plague*. The mortality from *diarrhœal diseases* was excessive in each of these Indian cities; *Asiatic cholera* caused 667 deaths in Calcutta.

RETURNS OF NOTIFIED CASES OF INFECTIOUS DISEASE.

At the request of the Local Government Board, and of the London County Council, and on their responsibility with respect to accuracy, tables have been inserted, in continuation of those published in previous returns, showing the numbers of cases of infectious sickness notified, under Act of Parliament, to the Sanitary Authorities of certain of the largest towns in England and Wales, during the first quarter of the year 1906 (*see* pages xxvii—xxxii).

TABLE VII.—One hundred and forty-two smaller Towns.—Population: Births and Deaths in the QUARTER ended 31st March, 1906.

NOTE.—The 142 Smaller Towns are those with populations of 20,000 but not exceeding 50,000 persons at the Census of 1901. They are arranged alphabetically under the Registration Counties in which they are situated. The Registrars alone must be considered responsible for the accuracy of the figures upon which these Returns are based.

TOWNS.	Cols.	The DEATHS registered in the Quarter include										TOWNS.

In this Table 000 indicates that the deaths were too few to give a rate of 0.005; where *no death* occurred, — is inserted. *None.*—The rates for the County of London do not in all cases agree with those in Table vi., page xix.; for explanation, see page ix. Formerly described as "Simple Continued Fever."

TABLE XI.—Births and Deaths in the First Quarter (13 weeks) of 1906 in certain Colonial and Foreign Cities.

The Registration Districts, 635 in number, are collections of contiguous Parishes or Places, combined for purposes connected with the Registration of Births, Deaths, and Marriages, and are nearly always identical with the Poor Law Unions of the same names; they are here arranged topographically under the Registration Counties.

^a See page 2, note ^b.

^b For London, the births and deaths given for the quarter are derived from the Weekly Returns made by the Registrar.

II.—SOUTH EASTERN COUNTIES.—REGISTRATION DISTRICTS.

Registration Districts.	Area in Acres.	Enumerated Population, 1901.	Marriages		Births	Deaths	The DEATHS in the Quarter are stated by the Registrars to include													
			Registered in Quarter ended 31 Dec. 1905.	Registered in Quarter ended 31 Mar. 1906.			Average in Quarters in the 3 Years 1904-05.	Registered in Quarter ended 31 Mar. 1906.	Deaths of		Deaths from								Inquest Cases.	Deaths in Public Institutions.
					Infants under 1 Year of Age.	Persons aged 60 Years & upwards.			Small-pox.	Measles.	Scarlet Fever.	Diphtheria.	Whooping-cough.	Fever.	Diarrhoea.	Violence.

5. 1.—On 1st February, 1906, St. James Westminster (1) and St. Anne Soho (2) sub-districts were united and called St. James and St. Anne (1). The births and deaths are shown as if the change had taken place at the beginning of the quarter. The Registration Sub-districts (2039 in number) are sub-divisions of the Registration Districts in which the Births and Deaths are registered by Registrars severally appointed for that purpose. The letter W denotes that the Sub-district is within its limits a Workhouse belonging to the District or Union; w indicates a Workhouse belonging only or partly to other Districts than that in which it stands; F a Hospital for Infectious Diseases; H another Hospital; L a Lunatic Asylum. When a sub-district contains more than one institution of either kind, the number is indicated by a figure prefixed to the letter.

See page 2, note b.

505: 1, 2.—On 1st March, 1906, Hemsworth sub-district was divided into two, viz., Hemsworth Eastern (1) and Hemsworth Western (2). See pages 70, 71. The births and deaths for the new sub-districts cannot be shown separately.

498: 3.—The 12 deaths from measles belonged to Rothwell Urban District.

502: 5.—Of the 5 deaths from scarlet fever 4 belonged to Mirfield Urban District.

504: 1.—Of the 5 deaths from whooping-cough 4 occurred at Ferry Bridge.

504: 4.—The 5 deaths from scarlet fever occurred in Castleford Urban District.

507: 3.—The 3 deaths from scarlet fever belonged to Penistone Urban District.

19: 2, 3, 4, 5.—On 1st February, 1906, the boundaries of these sub-districts were altered. See page 71. The births and deaths are included in the figures for the sub-districts in which they were registered.

18: 2.—Of the 25 deaths from measles 24 belonged to the parish of Rhosllanerchrugog.

22: 1.—The 4 deaths from measles belonged to the parish of Corwen.

25: 1.—Of the 3 deaths from measles 4 belonged to the parish of Penrhindudraeth: the 3 from diphtheria belonged to the parish of Talsarnau.

27: 1.—The 5 deaths from whooping-cough occurred in the parish of Llandlynfi.

31: 3.—The 4 deaths from diphtheria occurred in Holyhead Urban District.

CHANGES IN REGISTRATION DISTRICTS AND SUB-DISTRICTS IN THE QUARTER ENDED 31ST MARCH, 1906.

Changes in Registration boundaries are made by order of the Registrar General with the consent of the Local Government Board. Those changes which affect the boundaries of Registration Districts are necessitated by changes in boundaries of Poor Law Unions.

METEOROLOGY.

REMARKS ON THE WEATHER OVER THE UNITED KINGDOM DURING THE
QUARTER ENDED MARCH 31ST, 1906.

EXTRACTED FROM THE
MONTHLY WEATHER REPORTS

OF THE

METEOROLOGICAL OFFICE

BASED ON OBSERVATIONS AT 152 STATIONS,

TOGETHER WITH TABLES OF METEOROLOGICAL DATA AT 58 STATIONS
IN ENGLAND AND WALES, AND THE ENGLISH CHANNEL.

JANUARY, 1906.

General Summary.—As a result of the numerous Atlantic disturbances which skirted our coasts or moved across the country, the opening month of the year was of an exceedingly unsettled and boisterous character. For the first few days, under the influence of an almost stationary depression outside the south-western coasts, the weather was dry and cold, with South-Easterly to Easterly strong winds or fresh to strong gales on many sections of our coasts, a whole gale locally. In the main, however, the prevailing conditions were of a South-Westerly to Westerly type, the wind on several occasions increasing to a fresh or strong gale, and in some instances to the force of a whole gale. Rain was both frequent and heavy in all districts, and hail, sleet or snow was experienced very generally at times, but there were no great snow-storms, although there were occasionally fairly deep drifts brought about by the high winds in some northern districts. For the midwinter month thunderstorms were unusually frequent—at Portland Bill on the 5th and 10th; a remarkably severe one, accompanied by heavy squalls of hail and snow, and a very sudden and rapid rise of the barometer for a few minutes, was experienced pretty generally over the southern parts of Ireland and England on the 9th; Glencarron and Laudale were visited on the 12th; Blackpool and Aberystwyth on the 13th; Western Scotland between the 14th and 16th; and the South-West of Ireland on the 18th. Notwithstanding the disturbed character of the weather there were many fine bright periods, especially in the east and south, while the prevailing South-Westerly type insured almost continual mildness. For the month as a whole pressure was nearly everywhere in defect; the winds were mostly from between South and West; temperature exceeded the normal in all districts; generally there was a considerable excess of rain, while the duration of bright sunshine was in excess over the southern half of England, and in defect elsewhere.

Pressure.—*Mean at 8 a.m.* ranged from 30·06 ins. at Jersey, and above 29·9 ins. over the southern portion of England to below 29·6 ins. in the extreme north of Scotland, 29·48 ins. at Sumburgh Head. At Jersey the value was 0·02 in. above the average, and at Scilly nearly 0·01 in. above, but in all other localities the results were below the average, the defect increasing northward to 0·22 in. in the Shetlands. The general distribution of pressure was similar to the normal, but the gradient was steeper. *Highest* readings were registered between the 19th and the 23rd, when they exceeded 30·6 ins. at nearly all stations, touching 30·69 ins. at Pembroke and Roche's Point on the 19th, and at Oxford on the 23rd, and 30·70 ins. at Valencia on the 19th. *Lowest* values were recorded on the 6th, 9th and 10th. On the 6th the barometer fell to 28·92 ins. at Nottingham and Spurn Head; on the 9th to 28·66 ins. at Stornoway, and 28·69 ins. at Nairn; and on the 10th to 28·76 ins. at Sumburgh Head. There were several other days with readings down to nearly 29 ins. *Range* was not large for the time of year, amounting to only 1·1 in. at Jersey and slightly exceeding 1·8 in. at Malin Head, Stornoway and Nairn. In a narrow belt extending from Pembroke to Spurn Head, along the path of one of the deepest disturbances, the range was 1·7 in.

Depressions.—The disturbances of the month were numerous, the great majority of them, however, skirting the western and northern coasts on a general north-easterly course, and having their centres well out at sea, but as many as five low pressure systems crossed the country on a west to east course. A number of the disturbances were of considerable depth.

Anticyclones.—Nearly all the areas of high pressure were situated over some part of the Continent, but during the 22nd and 23rd, the central space of a well-formed anticyclone, with the barometer above 30·6 ins., moved across Ireland and England and passed on to the Continent. On the 30th one approached the south-western coasts, where the barometer rose to 30·5 ins.

Winds.—The disposition of pressure favoured the general prevalence of winds from points between South and West, and other quarters were rarely represented. Gales were experienced on 12 days at Stornoway, 11 at Deerness, 10 at Portland Bill, and 9 at Blacksod Point, Holyhead and Cockle Park.

Temperature.—*Mean at sea level* ranged from above 47° at Scilly and between 46° and 47° at the extreme south-western coast stations to below 40° over the north-east of Scotland, and as low as 38° at Lairg. The general distribution was in fair accordance with the normal, but the actual mean values were everywhere above the average, by more than 2° in most places, by more than 4° at Llangamarch Wells, Totland Bay, Wisley, Southampton, Portland Bill and Shrewsbury, and amounting to 5°·1 at Bawtry. *Highest* readings occurred generally between the 26th and the 28th, when there were numbers of instances of 55° and upwards, 57° at Bawtry and Hereford, and 59° at Maidenhead. Westminster's maximum of 54° occurred about midnight of the 12th. *Lowest* values were recorded mainly between the 22nd and 24th in England and Ireland, but on very varied dates in Scotland, 20° being touched at Nairn on the 1st, and at Wokingham on the 23rd; 21° at Llangamarch Wells (23rd) and Culmpton (24th); and 22° at Rauceby and Epsom (23rd) and Swarraton (24th). Minima from 23° to 25° were reported at many stations. *Range* was, in the absence of the usual low midwinter minima, very small, amounting to 34° only at Nairn, Maidenhead and Wokingham, while at a number of places, nearly all on the coast, it was 17° to 19°. *Vapour Pressure* ranged from 0·20 in. at Strathpeffer and 0·21 in. over the north-east of Scotland to 0·28 in. at Roche's Point and Scilly. *Relative Humidity* ranged from 80 per cent. at Westminster (6 p.m.) and 82 per cent. at Dublin (Trinity College) (9 a.m.) to 93 per cent. at Roche's Point and Birr Castle (8 a.m.) and Dunmow (9 a.m.) and 98 per cent. at Donaghadee (8 a.m.).

Rainfall.—With half a dozen unimportant exceptions the month's precipitation was above the average, the excess in many cases exceeding 2 ins., being as much as 5·4 ins. at Southampton and Glencarron, and 6·1 ins. at Arlington. The largest aggregates were 15·6 ins. at Glencarron, 12·1 ins. at Laudale, 10·6 ins. at Arlington and 10·4 ins. at Fort Augustus, more than a score of stations, mostly in Wales and the south-west of England, receiving from 6 ins. to more than 8 ins.; the smallest aggregates were 1·3 in. at Whitby and 1·4 in. at Aberdeen, only three other north-eastern stations returning less than 2 ins. Considering the wetness of the month falls of an inch or more in a day were not very numerous. On the 2nd several southern stations, between Worthing and Newquay, had from 1 in. to 1·4 in.; some of the Welsh stations had up to 1·3 in. on the 5th; and on the 16th there were heavy falls south of the Thames Valley, 1·8 in. at Southampton. At Glencarron 2·5 ins. fell on the 27th. The number of days on which precipitation was measured ranged from 30 at Blacksod Point and Foynes to 14 at Aberdeen and Whitby.

Bright Sunshine.—The duration of sunshine exceeded the average over the southern half of Britain, elsewhere it was mostly deficient, Southampton having an excess of 30 hours, Newton Rigg a deficiency of 16 hours. Ramsgate totalled 95 hours (37 per cent. of the possible duration), Bognor and Totland Bay 91 hours, and Broadstairs 90 hours (35 per cent.), whereas Manchester had 18 hours (7 per cent.), Bunhill Row 14 hours (6 per cent.) and Fort Augustus less than 8 hours (3 per cent.). Compared with Bunhill Row, in the centre of London, Westminster had 42 hours (17 per cent.) and Kew 65 hours (26 per cent.).

FEBRUARY, 1906.

General Summary.—Numerous Atlantic disturbances occasioned very unstable weather during this month. Barometric fluctuations were frequent and rapid, strong winds and gales, mainly from between South-West and North-West were common and often attended by rain, and at times hail, sleet or snow, but there were no snow-storms of any great magnitude.

There were several "V"-shaped disturbances, all presenting different characteristic features. That of the 8th affected a great part of England, and was remarkable for a striking barometric oscillation—in London the mercury rose 0·08 in. in four minutes—a sudden gloomy darkness, a violent squall of rain, hail or snow, and, for the time of year, exceptionally sharp thunderstorms. Much structural damage was caused by wind and lightning, and two fire-balls were seen in the Eastern Counties. The disturbance of the 13th passed across the country very quietly, while that of the 17th produced an almost continuous North-East rain over the southern counties. At Oxshott, in the last mentioned case, a kite ascended to 3,350 feet, where the North-East wind failed. Heavy rain continued throughout the ascent, and temperature fell only 6°, compared with 12° and 13°·5 for the same elevation at Oxshott and Petersfield respectively on the previous day, when at the former station there was a decided inversion of temperature above 5,000 feet, and at the latter at 3,400 feet. Thunder and lightning occurred at Newquay on the 14th, lightning at Fort William on the 14th and 15th, and thunder at Swarraton on the 16th and 26th. Notwithstanding the generally unsettled type there were during the month many very fine sunny periods. There were few mild days, but the nights were not so cold as usual, frosts being rare, as a rule of no great severity, and limited to the early morning hours. For the month as a whole pressure was below the normal; the winds were mainly in the South-West and North-West quarters; temperature was nearly everywhere in defect; there was an excess of precipitation over the greater part of the country; and the duration of bright sunshine was well above the normal.

Pressure.—*Mean at 8 a.m.* ranged from 29·88 ins. at Jersey, and above 29·80 ins. at the south-western stations to below 29·50 ins. in the north-east of Scotland and to 29·40 ins. at Sumburgh Head. The values were everywhere below the average, by 0·06 in. at Valencia, the deficiency increasing at all other stations, to as much as 0·30 in. at Wick, and 0·35 in. at Sumburgh Head. The general distribution differed from the normal, the gradient being steeper, and the isobars running from west-north-west to east-south-east rather than in the usual west-south-westerly to east-north-easterly direction. *Highest* readings were recorded between the 4th and the 7th, 30·39 ins. being reached at Roche's Point late on the 4th, and 30·53 ins. at Valencia at midday on the 7th. *Lowest* values occurred in all districts on the 10th and 11th, Malin Head touching 28·40 ins. and some other stations reporting below 28·5 ins., Jersey and Scilly being the only stations which remained above 29 ins. On the 15th Stornoway recorded 28·70 ins., and on the 25th 28·54 ins., and on the 28th Sumburgh Head touched 28·85 ins. *Range* amounted to nearly 2 ins. at Donaghadee and Malin Head, and exceeded 1½ in. generally over the northern and north-western districts, but was only 1·3 in. at Jersey and Dungeness.

Depressions.—Many areas of low atmospheric pressure visited the British Isles or their neighbourhood, the majority of them having their centres outside our coasts to north-west and north-east, but one, the deepest of the month, crossed the south of Scotland on the 10th, and four others visited the southern parts of England.

Anticyclones.—Nearly the whole of the high pressure systems were found outside these Islands, occupying regions between Portugal and north-eastern Russia. A small anticyclone, with barometer readings below 30·4 ins., moved slowly across Ireland and southern England on the 4th and 5th, but the highest barometer readings occurred on the 7th, the centre of the system being out at sea, passing down to the Bay of Biscay and Spain.

Wind.—In most localities the direction of the wind was mainly from points in the western half of the compass, North-Westerly to Westerly in the western districts, Westerly to South-Westerly in the east. The days on which gales were experienced numbered 11 at Deerness, 8 at Durham, 7 at Malin Head, and 6 at Holyhead and Stornoway.

Temperature.—*Mean at sea level* ranged from nearly 45° at Scilly to below 35° at Lairg and Fort Augustus. The general distribution was in fair agreement with the normal, but almost without an exception the actual values were below the average, by from 3° to 4° at Kilkenny Castle, Malin Head, Llangammarch Wells and Fort Augustus. *Highest* readings occurred on very irregular dates, and were generally lower than usual, 53° being the maximum, reached at Rhyl (11th), Killarney (20th), Maidenhead (25th), and Ballinacurra (28th). *Lowest* values were also on various dates, very few below 20°, but on the 13th Fort Augustus touched 12° and Balmoral 11°. *Range* was, in the general absence of high maxima and low minima, unusually small, only a few stations exceeding 30°, Fort Augustus and Lairg showing 34°, and Balmoral 38°. There were numerous cases of 20° or less, only 16° at Scilly and Spurn Head. *Vapour Pressure* ranged from 0·24 in. at Scilly (8 a.m. and 6 p.m.) and Roche's Point (6 p.m.) to 0·16 in. at Strathpeffer (9 a.m.). *Relative Humidity* ranged from 93 per cent. at Brixton and Spurn Head (8 a.m.) to 78 per cent. at Westminster, Portland Bill, Scilly, Jersey and Valencia (6 p.m.). *Mean Earth Temperature* at 1 ft. depth ranged from 36° at Lincoln and Nottingham to 42° at Markree Castle; and at 4 ft. depth from 39° at Nottingham to 44° at Bath.

Rainfall.—There was a deficiency of precipitation at various stations in the north-eastern and midland counties of England and in the south of Ireland, Roche's Point being 1·4 in. below the average, but generally there was an excess, of as much as 3·2 ins. at Lairg and 4 ins. at Stornoway. The largest aggregates for the month were 8·9 ins. at Laudale, and 8 ins. at Stornoway; the smallest, 0·9 in. at Newcastle-on-Tyne, and 0·8 in. at Saltburn-by-the-Sea and Leith. Falls of an inch or more in a day were very few, the heaviest being 1·5 in. at Falmouth on the 22nd, and at Stornoway on the 25th. The days on which any precipitation was measured ranged from 27 at various stations in Ireland and Scotland to 12 at Durham, and 11 at Clifton and Southend.

Bright Sunshine.—With the exception of a nominal deficiency at Margate the duration of bright sunshine was everywhere above the average; the excess amounting to 50 hours at Edinburgh, 48 at Glasgow, 46 at Torquay, 45 at Aberdeen, above 40 hours at some other stations. Many places totalled more than 100 hours, Cooke Park and Crathes 118, and Torquay 121 hours. The percentage of possible duration ranged from 45 at Aberdeen and Crathes to 20 at Manchester and Westminster, and 14 at Bunhill Row (London).

MARCH, 1906.

General Summary.—The atmospheric conditions of the month were divided almost equally into two main features. In the first half barometric pressure was nearly always highest over Continental regions, most of the disturbances affecting the British Isles keeping on a general north-easterly course well outside our western and northern coasts. Winds from Southerly to Westerly points consequently prevailed, occasionally drawing into the Northward. Extremely variable weather characterised this period. Early in the month it was exceptionally brilliant, the duration of bright sunshine for the five days 3rd to 7th reaching the very high proportion of from 80 to 86 per cent. of the possible at some of the southern and south-eastern stations. Unseasonable warmth accompanied the brightness, temperatures from 60° to 67° being registered in many places on the 6th and 7th. In the rear of a very deep cyclonic system which crossed the North Sea early on the 12th a severe North-Westerly to Northerly gale was experienced in several districts. One result was that the eastern coasts of Britain and the shores of the adjacent Continental countries were inundated by an abnormally high spring tide, described as the highest in thirty years, considerable damage being caused. (For a very similar case, see the Summary for January, 1905.) Under the influence of the polar winds the weather became very cold, snow fell nearly everywhere, heavily in some parts of Scotland, and numbers of stations registered minimum shade temperatures below 20°, down to 8° at Fort Augustus. On the 16th torrential rains fell over western Scotland, nearly 3 ins. at Fort William, and next morning, with a soft South-Westerly breeze and a rapid rise of temperature, the snow of previous days was melted, the result being serious and destructive floods. The 17th was as bright and warm as some of the earliest days, but on the 18th the type of conditions underwent a complete reversal. For the rest of the month a high pressure area remained centred in the neighbourhood of our western and north-western coasts, disturbances were confined to the southern and eastern parts of Europe, and a cold, searching North-Westerly to North-Easterly and Easterly current prevailed over these islands, producing frequent slight falls of rain, hail, sleet or snow, but there were again many fine sunny periods, especially over the western half of Britain. Lightning was seen at Fort Augustus on the 7th, there was a thunderstorm at Edinburgh on the 8th, and thunder occurred at Tunbridge Wells on the 19th. For the month, as a whole, pressure was above the normal; the winds were South-Westerly to North-Westerly and North-Easterly; temperature was in defect in nearly all localities; precipitation was irregular, but mostly in defect; and bright sunshine was generally in excess.

Pressure.—*Mean* at 8 a.m. ranged from 30·07 ins. at Jersey and above 30·0 ins. over the greater part of Ireland and southern England to less than 29·8 ins. in the extreme north-east of Scotland, 29·73 ins. at Sumburgh Head. The values were everywhere above the average, the excess being only 0·01 in. at Sumburgh Head, but as much as 0·15 in. over the south and west of Ireland. The general distribution differed somewhat from the normal, the isobars being from north-west to south-east instead of from west-south-west to east-north-east. *Highest* readings recorded were 30·50 ins. at Jersey on the 3rd, and above 30·5 ins. in Ireland on the 20th, 30·57 ins. at Blacksod Point. *Lowest* value was 28·64 ins. at Shields on the 11th. Sumburgh Head went down to 28·84 ins. on the 8th, and to 28·87 ins. on the 15th. *Range* was moderate for the season, from 1·1 in. at Jersey and Scilly to 1·7 in. at Aberdeen and Shields.

Depressions.—The deepest disturbance moved across the northern parts of Ireland and England on the 11th, becoming much deeper on the North Sea next day, barometer about 28·3 ins. Shallow disturbances visited the English Channel region on the 2nd and 14th. With these exceptions the month's depressions had their centres well outside the Kingdom, on the Atlantic and round to Scandinavia in the first half, and over southern and eastern Europe later.

Anticyclones.—The central space of a high pressure system was over the Channel Islands on the 3rd, and after the 17th pressure was continuously highest off our western and northern coasts, but only on the 19th and 20th were there barometer readings above 30·5 ins. at a few of the extreme western stations.

Winds.—Southerly to Westerly winds prevailed in the first half, and North-Westerly to North-Easterly afterwards. Gales occurred on 9 days at Cockle Park, on 6 days at Trinity College, Dublin, and on 5 days at Blacksod Point and Laudale.

Temperature.—*Mean at sea level* ranged from 46° at Scilly to 37° at Sumburgh Head and Balmoral. The actual values were as a rule below the average, the defect in most cases being less than 1°, but at Llangammarch Wells and Fort William it exceeded 2°. Several stations in Ireland and the east of England were slightly above their usual level, and Bawtry, Foynes, and Waterford had an excess of 1° or more. *Highest* readings were recorded on the 7th or 17th over England, on the 16th in Ireland, and on very varied dates in Scotland. Cambridge, Lowestoft and Geldeston reached 67° on the 7th, Dublin (City and Trinity College) 60° on the 16th, and Leith 57° on the 30th. *Lowest* values occurred generally on the 13th or 14th, many stations in Scotland and in the north of England passing below 20°, Fort Augustus to 8°, Balmoral (10th) and Lairg 11°, Clathick and Fort William 12°. *Range* was large, 40° and upwards in many localities, 46° at Wokingham. At Pembroke and Holyhead it was only 21°. *Vapour Pressure* ranged from 0·26 in. at Blacksod Point and Roche's Point (6 p.m.) to 0·18 in. at Strathpeffer (9 p.m.). *Relative Humidity* ranged from 92 per cent. at Birr Castle (8 a.m.) to 75 per cent. at Shields (6 p.m.). *Mean Earth Temperature* at 1 ft. depth ranged from 39° at Sheffield, Newton Rigg and Lincoln to 44° at Markree Castle and Plymouth; and at 4 ft. depth from 40° at Newton Rigg and Nottingham to 44°·5 at Bath.

Rainfall.—Precipitation was irregularly distributed, but was below the average in most places. Generally the differences were less than an inch, but the deficiency at Stornoway was 2·4 ins., and at Killarney 2·3 ins., while Fort William had an excess of 1·2 in., and Glencarron 1·6 in. The largest aggregates were 9·5 ins. at Glencarron and 7·8 ins. at Fort William, the smallest 0·6 in. at Saltburn-by-the-Sea. There were few instances of an inch or more in a day—on the 7th, Bettws-y-Coed and Stonyhurst; on the 10th, Arlington and Port Talbot; and on the 16th in Western Scotland. The days with precipitation ranged from 29 at Sumburgh Head to 10 at Chester and Glasgow.

Bright Sunshine.—The duration of sunshine was variable, most stations being above the average, Prestwich having an excess of 47 hours; Birr Castle a deficiency of 32 hours; Falmouth totalled 165 hours, or 45 per cent. of the possible duration; Fort Augustus 68 hours, or 19 per cent.

TABLES OF METEOROLOGICAL DATA FOR ENGLAND AND WALES AND THE ISLANDS IN THE ENGLISH CHANNEL.

Prepared in the Meteorological Office under the direction of
W. N. Shaw, Sc.D., F.R.S.

In compiling the following Tables (pp. 80 to 89) the stations have been grouped into eight Districts, namely, 1. London; 2. England, Central; 3. England, South; 4. England, East; 5. England, North-East; 6. England, North-West with North Wales; 7. England, South-West with South Wales; 8. The Islands in the English Channel. Each of these Districts is represented by a number of stations ranging from 3 to 12.

In making a selection from the whole number of stations available, endeavour has been made to represent as far as possible the various meteorological conditions of the several districts. Regard has been had not only to uniformity of geographical distribution, but also to the situation of the stations with regard to the sea coast, their height above sea level, and to their special characteristics as representing urban, suburban, or rural meteorological conditions.

Observations of earth temperature and of wind-force are included in the Tables. The wind observations at Falmouth and Kew are based on the records of a standard Robinson anemometer (factor 2·2). Velocities between 13 and 38 miles in the hour have been entered in the Tables as strong winds, velocities of 39 miles in the hour, or above, as gales. At the remaining stations the wind-force observations are personal estimates in accordance with Beaufort's scale, and are specially liable to be affected by local circumstances. No previous comparison of corresponding data is available for the purpose of checking the results.

The stations selected, with the names of the Observers, are shown below.

LIST OF STATIONS AND OBSERVERS.

Station.	Observer.	Station.	Observer.
1. LONDON:—		3. ENGLAND, S.:—	
Greenwich ..	The Royal Observatory.	Southampton .	A. Vaughan, for Director General of Ordnance Survey.

Carlisle..	Studholme Cartmell, for the Corporation.		
Stonyhurst ..	Rev. W. Sidgreaves, S.J. The Observatory.		

DAYS OF "CLEAR SKY" AND "OVERCAST."

A day is reckoned as a day of "clear sky" if the average of the estimates of the fraction of sky covered by cloud at the two hours of observation is less than .2, and as an "overcast" day if the average is greater than .8. At the Royal Observatory, Greenwich, records are kept of days persistently cloudless and days persistently overcast from midnight to midnight. The numbers of such days for the current quarter are:—Clear sky, 0, 0, 0; and Overcast, 0, 2, 1.

Oxford:—The observing hours at Oxford (the Radcliffe Observatory) are 8 a.m., noon and 8 p.m. The results given under Barometer and Hygrometer are the means of the observations at these hours reduced to the means for 9 a.m. and 9 p.m. by corrections deduced from a discussion of the Photographic Continuous Records. (See *Radcliffe Observations*, Vols. XXXIX. to XLV.) The averages used at Oxford are based on observations as follows: Rain, 86 years, 1815–1900; Temperature, 73 years, 1828–1900; Sunshine, 20 years, 1881–1900.

[Name of Station, County and Height [The figures give the height of the Cistern of the Baro- meter above Mean Sea Level.]	1906.	Baro- meter.		Air Temperature.								Hygrometer.				Earth Tem- pera- ture.		Bri- Suns

* The hours of Observation are 9 a.m. and 9 p.m. local time, with the following exceptions. At the stations marked

For all the stations marked a, b, and c, the results under Barometer, Hygrometer and Cloud are based on the results for districts. For the station marked c, and for Camden Square, where the wind is not observed at 9 p.m., the results are more readily comparable with the results for other stations. They, as well as the numbers of days of "Clear

† The averages used are obtained from observations extending over 35 years, namely:—For Rainfall, 35 years, 1871–1905; Sunshine, 15 years, 1891–1905.

‡ At the Royal Observatory the earth temperature is taken at 3 feet 2 inches below the surface; at this station numbers for the 1st Quarter as thus calculated, are respectively Clear Sky 0, 0, 0, and Overcast 0, 2, 1. See Note on page 81. Wind Force.—Beaufort Scale (0–12) is used. The number of observations of moderate and strong wind (force 4 and 5) is 10, 10, 10, and 10.

Westminster, Brixton and Nottingham) the observing hours are 8 a.m. and 6 p.m. Greenwich time. (Barnet) the observing hours are 9 a.m. and 3 p.m. local time. (Coventry) the observing hour is 9 a.m. local time. Stations only, and these results are in consequence printed in French type. They have not been included in the means Direction and the Number of Observations of Moderate and Strong wind have been multiplied by 2 in order to make Overcast at these stations, are printed in French type, but are included in the means for districts. Temperature, 35 years, 1871-1905; Sunshine, 25 years, 1881-1905. (Greenwich: Rain, 50 years; Temperature, 50 years; Number of days of "Clear Sky" and "Overcast" are also computed from observations extending over the whole day. The number of observations of calm and the number of days of gale are given in the table.

* At Oxford the observations are taken at 8 a.m., noon, and 8 p.m., see Note on page 79. At all the other stations the observations are 9 a.m. and 9 p.m. local time, with the following exceptions. At the stations marked :—

For all the stations marked a, b, and c, the results under Barometer, Hygrometer and Cloud are based on the means for districts. For the station marked c, the results for Wind Direction and Number of Observations of Moderate stations. They, as well as the number of days of "Clear Skv" and "Overcast" at this station, are printed in italics.

† The averages used are obtained from observations extending over 35 years, namely :—For Rainfall, 35 years, 1871–1905.

‡ At Belvoir Castle the earth temperature is taken at 3 feet below the surface.

Wind Force.—Beaufort Scale (0–12) is used. The number of observations of moderate and strong wind (force 4 and 5) is given.

Ann's Head, Bath, Scilly and Jersey) the observing hours are 8 a.m. and 6 p.m. Greenwich time.
Instantley the observing hours are 9 a.m. and 3 p.m. local time.
Ungammarh Wells the observing hour is 9 a.m. local time.
These results are in consequence printed in French type. They have not been included in the means
have been multiplied by 2 in order to make them more readily comparable with the results for other stations.
used in the means for districts.
ature, 35 years, 1871-1905; Sunshine, 25 years, 1881-1905.
ber of observations of calm and the number of days of gale are given in the table.

[illegible]

INDEX OF URBAN DISTRICTS

As constituted on 31st March 1906 together with a reference to the number of the Registration District and Sub-district in which each is situated. See pages 6-69 of this Return.

Urban Districts which are County Boroughs or Municipal Boroughs are indicated by the letters C.B. or M.B. Those Urban Districts marked * have been created, and the boundaries of those marked † have been altered since the Census of 1901.

NOTE.—The exact constitution of each Urban District and of each Registration Sub-district is shown in Tables 9 and 12 respectively of the Census County Volumes. Of the 1,164 Urban Districts (including County, Municipal, and Metropolitan Boroughs) 149 were each co-extensive, at the end of March 1906, with one or more Registration Areas.

Printed under the Superintendence of His Majesty's Stationery Office,
AND SOLD BY WYMAN AND SONS, LTD., FETTER LANE, E.C.

No. 230.] **Marriages**—*January, February, March, 1906.* [Price 9d.
Births and Deaths—*April, May, June, 1906.*

*General Register Office, Somerset House,
25th July, 1906.*

UNITED KINGDOM.

The POPULATION of the UNITED KINGDOM in the middle of 1906 is estimated at 43,659,121 persons; that of England and Wales at 34,547,016, that of Scotland at 4,726,070, and that of Ireland at 4,386,035.

In the United Kingdom 299,213 *births* and 164,427 *deaths* were registered in the three months ended 30th June 1906. The natural increase of population was, therefore, 134,786. The number of *persons married* in the quarter ended 31st March 1906 was 119,430.

The birth-rate in the United Kingdom in the *second* quarter of 1906 was 27·5, and the death-rate 15·1, per 1000 of the estimated population. The marriage-rate in the *first* quarter of 1906 was 11·1 per 1000.

The facts, in detail, concerning Scotland and Ireland, are recorded in the Quarterly Returns of the Registrars-General for those parts of the United Kingdom.

Passenger Movement.

According to Returns issued by the Board of Trade, it appears that during the three months ended 30th June last, 176,546 passengers left the United Kingdom for places out of Europe. Persons of British origin numbered 107,611, of whom 67,925 were English, 18,519 were Scottish, and 21,167 were Irish. Persons of Foreign origin numbered 67,655, whilst the nationality of 1,280 others was not stated.

Compared with the numbers in the corresponding period of the previous year, the proportion of English passengers showed an increase of 34·4 per cent., that of Scottish an increase of 37·9 per cent., and that of Irish an increase of 25·1 per cent.

ENGLAND AND WALES.

This Return comprises the BIRTHS and DEATHS registered in the 2,037 registration sub-districts of England and Wales during the three months ended 30th June 1906; and the MARRIAGES in 15,593 churches or chapels, in 14,465 registered places of worship unconnected with the Established Church, and in 635 Superintendent Registrars' Offices, during the three months ended 31st March 1906.

Marriages.

During the *first* quarter of 1906 the marriages of 90,864 persons were registered, being equal to an annual rate of 10·7 persons married per 1000 of the estimated population, against an average rate of 11·4 per 1000 in the first quarters of the ten years 1896-1905.

Among registration counties with populations exceeding 100,000 persons the lowest marriage-rates were 7·3 in Oxfordshire, 7·6 in Northamptonshire, and 8·0 in Hertfordshire, Cambridgeshire, and Essex; the highest rates were 12·0 in Lancashire and in the North Riding of Yorkshire, 12·7 in Durham, 12·8 in Northumberland, and 13·9 in Glamorganshire.

Births.

The births registered in the *second* quarter of 1906 numbered 237,187, and were in the proportion of 27·5 annually per 1000 of the population; this is the lowest birth-rate recorded in any second quarter since civil registration was established. The mean rate in the ten preceding second quarters was 29·1. In registration counties with populations exceeding 100,000 persons the lowest birth-rates during the quarter were 21·3 in Sussex, 21·5 in Cornwall, 21·7 in Herefordshire, 22·5 in Somersetshire, and 22·7 in Devonshire; the highest rates were 31·1 in Northumberland, 31·3 in Nottinghamshire, 31·6 in Staffordshire, 32·1 in the North Riding of Yorkshire, 33·8 in Glamorganshire, 34·8 in Durham, and 35·5 in Monmouthshire.

In 76 great towns the birth-rate averaged 28·3 per 1000, ranging from 17·6 in Hastings, 18·6 in Halifax, 19·0 in Bournemouth, and 19·3 in Hornsey, to 35·3 in Sunderland, 37·3 in Middlesbrough, and 37·4 in Rhondda and in Merthyr Tydfil. In 142 smaller towns the mean birth-rate was 26·9 per 1000, and in the remainder of England and Wales, excluding the 218 chief towns, it was also 26·9.

Natural Increase of Population.

The natural increase of population in England and Wales during the quarter, by excess of births over deaths, was 111,800, against 117,850, 114,389, and 113,726 in the second quarters of 1903, 1904, and 1905 respectively.

Prices and Pauperism.

The average price of wheat per quarter, which had been 29s. 5d., 27s. 11d., and 28s. 6d. respectively in the preceding three quarters, was 29s. 10d. last quarter. The mean wholesale prices per lb. of British beef and mutton at the Metropolitan Cattle Market were:—of inferior beef, 4½d.; of prime beef, 6½d.; of inferior mutton, 5½d.; of prime mutton, 8½d. Compared with the average prices in the preceding three months, the

mean prices of inferior beef and of prime beef remained unchanged, while the mean prices of inferior mutton and of prime mutton showed respectively a decrease of $1\frac{1}{2}d.$ and of $\frac{3}{4}d.$ The average price in the London Market of sea-borne coal put in barge from the collier in the Thames was $15s. 2d.$ per ton, against $14s. 10d.$ per ton in the second quarter of 1904.* The mean price of Consols was $89l. 11s. 2d.$, having been $90l. 2s. 8d.$ in the preceding quarter. The minimum annual rate per cent. of discount charged at the Bank of England, which had remained at $4l.$ since 28th September 1905, was reduced to $3l. 10s.$ on 5th April, 1906, raised to $4l.$ on 3rd May, and reduced again to $3l. 10s.$ on 21st June. The mean rate during the quarter was $3l. 13s. 1d.$

The average number of paupers (exclusive of lunatics in asylums, of casual paupers, and of persons receiving medical relief only) relieved in England and Wales on the last day of each week in the quarter was 770,068; of whom 242,777 received in-door, and 527,291 out-door, relief. The proportion of the population in receipt of poor-law relief was 22·3 per 1000, against 22·0 and 22·6 per 1000 respectively in the second quarters of 1905 and 1906.

Meteorology.

A detailed report on the weather over the United Kingdom in the past quarter, with a table of Monthly Results for a number of stations in England and Wales, prepared in the Meteorological Office, will be found on pp. 71-89.

The weather of this quarter, though mainly fair and dry, was subject to considerable variations.

In April the conditions were influenced mainly by anticyclonic systems which drifted eastward across the country from the Atlantic, and in the earlier half of the month temperature was above the average, an entire absence of rain being reported over a considerable portion of our southern counties. Later on, the wind blew mainly from some Northerly quarter and the thermometer was decidedly low with an occasional sharp night frost in most districts. The amount of bright sunshine recorded during the month was largely in excess of the average and was in many localities the highest registered in April since the general introduction of Sunshine Recorders in 1881. Thunderstorms occurred in various parts of England on the 12th and 13th and in the closing week of the month.

In May the wind blew with singular impartiality from almost every point of the compass and the weather was generally cloudy and changeable, the deficiency of sunshine at some of the northern stations being almost equal in extent to the excess noted in April. Temperature was above the average in the second week and also at the close of the month but was at other times considerably below the normal, with occasional sharp ground frosts in most districts. Sharp thunderstorms occurred on the 8th over the Thames Valley and on the 13th in many parts of our eastern and southern counties. Between the 16th and 19th the northern and north-eastern districts were visited by repeated heavy rains, the fall on the 19th amounting to between 2 ins. and $2\frac{1}{2}$ ins. at several stations in Durham and Northumberland.

June opened with a brief spell of thundery weather, after which the conditions improved materially, very little rain falling in the eastern and southern counties until the closing part of the month. In the third week the temperature was above the average, but at other times there was a

* No prices for sea-borne coal were quoted in the second quarter of 1905.

general deficiency, and at the close of the first week sharp night frosts were experienced in many places. Between the 28th and 29th a heavy fall of rain occurred over the whole of our southern and eastern counties, the largest amounts, 2 ins. to about $2\frac{3}{4}$ ins., being experienced in London, and over a somewhat narrow tract of country lying to the north of the Metropolis. In London the whole of the fall occurred in the space of about 12 hours, between midnight of the 28th and noon of the 29th. On the morning of the 27th a sharp earthquake shock was experienced over Wales and the western parts of England.

For the quarter as a whole the *mean temperature* in London showed an exact agreement with the average. In other districts it was below the normal, the difference (nowhere very large) being greatest in England South-west. The highest temperatures occurred, as a rule, on June 20th or 23rd. Over a considerable portion of the country the thermometer did not touch 80° , but in England South and England North-west it rose to 81° or 82° , while in the London district (at Barnet) it rose to very nearly 84° . The lowest temperatures were observed as a rule at some time or another in April, but in the English Channel district they occurred about the middle of May. The April minima were in nearly all districts as low as 25° , and in England North-west and South-west the sheltered thermometer fell below 21° , the reading at Carlisle on the morning of April 19th being as low as $20\cdot2^{\circ}$.

The *rainfall* measured in London amounted to 4·8 ins. or to about 84 per cent. of the average. A deficiency was reported in all the other eastern, central and southern districts, slight as a rule, but rather large in England Central, where the total amount was only 85 per cent. of the average. In the western districts there was a slight excess. The heaviest individual falls occurred respectively over the north of England on May 19th, and over the southern and eastern parts of the country on June 28th or 29th, on each of which occasions 2 inches or more were registered at a large number of stations. Almost equally large amounts were recorded in some isolated parts of England and Wales on May 8th.

The duration of *bright sunshine* in London amounted to 583 hours or to 42 per cent. of the possible duration, the aggregate being 96 hours in excess of the average for the 20 years 1881-1900. A considerable excess was reported also in England South and East and a smaller excess in England Central and England South-west. In England North-east and the Channel district the amount agreed closely with the average, while in England North-west there was a slight deficiency. The sunniest weeks were those ending April 14th and June 9th. On the former occasion more than 60 per cent. of the possible duration was recorded in all districts and more than 70 per cent. in England South-west and the Channel Islands. On the latter occasion more than 60 per cent. was recorded in every district excepting England North-east and England Central, more than 70 per cent. in England South, and as much as 80 per cent. in the Channel Islands.

Deaths.

The deaths registered in England and Wales last quarter numbered 125,387, and were in the proportion of 14·6 annually per 1000 persons living, the average rate in the ten preceding second quarters having been 15·9. In registration counties with populations exceeding 100,000 persons, the death-rates ranged from 11·2 in Middlesex, 11·5 in Essex, 11·7 in Kent, and 11·8 in Northamptonshire, to 16·0 in Durham, Northumberland, and Cumberland, 16·6 in Shropshire, 16·9 in Lancashire, 17·3 in the North Riding of Yorkshire, 17·8 in Carnarvonshire, and 19·0 in Denbighshire.

The 125,387 registered deaths included 64,903 of males and 60,484 of females, the death-rate among males being 15·6, and that among females 13·6, per 1000 of the estimated populations of the respective sexes. Compared with the average for each sex in the ten preceding second quarters the death-rate of males showed a decrease of 1·5, and that of females a decrease of 1·1, per 1000 living. Out of equal numbers living, the deaths of males were to those of females as 115 is to 100, the proportion in the second quarters of the ten preceding years having been 117.

Urban and Rural Mortality.

In 76 great towns, in each of which the population at the census of 1901 exceeded 50,000, and of which the aggregate population in the middle of 1906 is estimated at more than fifteen and three-quarter millions of persons, the death-rate was 14·9 per 1000 living, or 0·3 above the death-rate in the whole country. The rates in the several towns ranged from 7·6 in Hornsey, 8·5 in East Ham, 8·7 in Willesden, and 9·1 in Handsworth (Staffs.), to 18·0 in Hanley, 18·4 in Salford, 18·5 in Burnley, 19·0 in Manchester, 20·2 in Middlesbrough, and 20·5 in Liverpool.

In 142 smaller towns, with populations ranging between 20,000 and 50,000 at the census of 1901, and with an aggregate population estimated at more than four and three quarter millions of persons in the middle of 1906, the death-rate was 13·4 per 1000 living, or 1·5 per 1000 below the rate in the great towns.

In the remainder of England and Wales, with an aggregate population estimated at more than thirteen and three-quarter millions of persons, of whom about six and a quarter millions live in small towns, and more than seven and a half millions in rural districts, the death-rate was 14·6.

Watering Places and Summer Resorts.

The deaths registered last quarter from all causes, and from each of the more important epidemic diseases, in those urban districts which are most nearly co-terminous with our chief watering places, are shown in Table XI. For purposes of comparison the populations at the census of 1901 are also shown.

Mortality at Different Ages.

Of the 125,387 deaths registered last quarter, 24,311 were those of infants under one year of age, 58,077 those of persons aged between one year and sixty years, and 42,999 those of persons aged sixty years and upwards.

Infantile mortality, measured by the proportion of deaths under one year of age to registered births, was 102 per 1000, the average in the ten preceding second quarters having been 119. Among registration counties with populations exceeding 100,000 persons, the lowest proportions per 1000 births were 65 in Oxfordshire and in Bedfordshire, 72 in Hampshire, 74 in Wiltshire, and 77 in Surrey, Kent, Sussex, and Middlesex. The highest proportions were 120 in Glamorganshire, 121 in Lancashire, 122 in Warwickshire, 158 in Denbighshire, and 160 in Carnarvonshire.

In the 76 great towns infantile mortality averaged 108 per 1000 births, being 6 per 1000 above the proportion in England and Wales as a whole. Among the several towns the lowest proportions were 60 in Hornsey, 61 in

Hastings, 68 in Tottenham, 69 in Bournemouth, and 73 in East Ham; the highest were 139 in West Bromwich and in Birmingham, 140 in Liverpool, 142 in Norwich, 144 in Bradford, 146 in Bury, and 165 in Burnley. Among the 142 smaller towns infantile mortality averaged 102 per 1000 births, ranging from 37 in Bromley, 44 in Folkestone and in Enfield, and 46 in Richmond (Surrey), to 160 in Colne, 164 in Hyde, 165 in Oldbury and in Dudley, 170 in Bilston, 174 in Taunton, and 179 in Dewsbury. Excluding these 218 towns, infantile mortality in the remainder of England and Wales was in the proportion of 97 per 1000 births.

The mortality in England and Wales among persons aged between one year and sixty years was at the annual rate of 7·5 per 1000 of the estimated population at this group of ages, being 0·9 below the mean rate in the ten preceding second quarters. In the 76 great towns the mean mortality at this age-group was 8·3 per 1000, ranging from 3·4 in Hornsey, 4·0 in Handsworth (Staffs.), 4·4 in East Ham, 4·7 in Willesden, and 4·8 in Kings Norton, to 10·1 in Oldham, 10·7 in Burnley, 10·9 in Salford, 11·3 in Manchester, 12·1 in Middlesbrough, and 12·2 in Liverpool. In the 142 smaller towns the mortality at this age-group averaged 6·7 per 1000.

Among persons aged sixty years and upwards the mortality was at the annual rate of 67·4 per 1000 of the estimated population at this group of ages, the mean rate in the ten preceding second quarters having been 65·3. In the 76 great towns the mean mortality at this age-group was 70·2 per 1000, the lowest rates being 41·8 in Willesden, 48·1 in Croydon, 50·4 in Leyton, and 52·9 in Kings Norton; and the highest, 90·7 in Oldham, 93·6 in Barrow in Furness, 93·7 in Stockport, 94·9 in Warrington, and 121·5 in Hanley. In the 142 smaller towns the rate averaged 67·3 per 1000.

Compared with the mean rates in the ten preceding second quarters, the mortality of infants under one year of age showed a decrease of 14·3 per cent., that of persons between one year and sixty years of age a decrease of 10·7 per cent., and that of persons aged sixty years and upwards an increase of 3·2 per cent.

Mortality from certain Epidemic Diseases.

The 125,387 deaths from all causes include—

2,915	that were attributed to measles,
2,616	” ” whooping-cough,
1,224	” ” diarrhœa,
1,156	” ” diphtheria,
903	” ” scarlet fever,
507	” ” “fever,”
1	that was ” small-pox.

Thus, to the above-mentioned epidemic diseases in the aggregate, 9,322 deaths were referred last quarter, being in the proportion of 1·08 per 1000 of the estimated population, or 0·35 per 1000 less than the average proportion in the corresponding quarters of the previous ten years.

The rates of mortality from these diseases severally were below the decennial averages.

Measles was returned as the cause of death in 2,915 instances, corresponding to an annual rate of 0·34 per 1000 of the population, which is below the average rate in the second quarters of the preceding ten years by 0·10 per 1000.

Ten of the counties of England and Wales were free from measles fatality throughout the quarter recently ended; the counties with populations of more than 100,000 persons showing the highest fatality from this disease were Gloucester, where the annual rate was equal to 0.44, the West Riding of Yorkshire 0.52, Northumberland 0.54, London 0.65, and Lancashire 0.77 per 1000 of the respective populations. In the 76 great towns measles caused an average mortality of 0.56 per 1000. In 18 of these towns no deaths from this disease were registered during the quarter. The highest death-rates were 1.10 in Newcastle on Tyne, 1.22 in Salford, 1.31 in Bradford, 1.55 in Liverpool, 1.65 in Manchester, 2.06 in Great Yarmouth, and 2.69 in Burnley. In the 142 smaller towns, measles was fatal on the average to 0.20 annually per 1000 persons living, and among these towns showed exceptional fatality in Todmorden, Gorton, Reigate, Twickenham, Heston and Isleworth, Taunton, and Colne. In the last-mentioned town the death-rate from measles was equal to 4.25 annually. In the remainder of England and Wales the average measles death-rate was 0.13 per 1000 of the population. Among registration sub-districts outside the 218 chief towns, measles was especially fatal in Twerton and Yeadon.

Whooping-cough accounted, last quarter, for 2,616 deaths, and for a death-rate equal to 0.30 per 1000 annually, which is lower by 0.08 per 1000 than the average rate in the ten previous corresponding quarters. In Rutlandshire no deaths were registered from this disease; in counties with populations exceeding 100,000 persons, the death-rate rose to 0.44 in Monmouthshire, 0.51 in Staffordshire, 0.64 in Warwickshire, 0.70 in Carnarvonshire, and 0.78 in Shropshire. In the 76 great towns, whooping-cough caused an average death-rate of 0.38 per 1000 living. Seven of these towns were free from mortality from this disease throughout the quarter, but the death-rate therefrom was equal to 0.91 in Bootle, 1.04 in Warrington, and 1.05 in Coventry. In the 142 smaller towns, the average death-rate from whooping-cough was 0.28 per 1000; the disease being especially fatal in Chester, Oldbury, Tipton, Shrewsbury, Bilston, and Ebbw Vale. In the remainder of England and Wales, whooping-cough caused an average mortality equal to 0.23 per 1000 annually. Among registration sub-districts outside the 218 chief towns, whooping-cough was exceptionally fatal in Broseley, Sandal, and Newtown (Montgomery).

Diarrhœa was the assigned cause of 1,224 deaths last quarter, equal to an annual mortality of 0.14 per 1000, which is lower by 0.04 per 1000 than the decennial average rate for the second quarter of the year. In three counties no deaths from diarrhœa were returned last quarter. Among counties with populations exceeding 100,000 persons the highest rates from this disease were 0.20 in Glamorganshire, 0.22 in Staffordshire and in Lancashire, and 0.25 in the North Riding of Yorkshire. In the 76 great towns the average death-rate from diarrhœa was 0.17 per 1000; no diarrhœa deaths were returned in six of these towns; the rate was highest in the following towns:—Walsall 0.34, Great Yarmouth 0.38, Warrington 0.41, Rotherham 0.46, Oldham 0.54, and Middlesbrough 0.56. In the 142 smaller towns diarrhœa was fatal on the average to 0.12 per 1000 of the population, and caused the highest mortality in Aberdare and Longton. In the remainder of England and Wales the death-rate from diarrhœa averaged 0.11 per 1000.

Diphtheria (exclusive of *croup* unless stated to be *membranous*) was returned last quarter as the cause of 1,156 deaths, a number equal to an annual rate of 0.13 per 1000 living, which is below the average rate in the ten previous corresponding quarters by 0.06 per 1000. Four of the counties were entirely free from fatal diphtheria throughout the quarter. Among counties with populations exceeding 100,000 persons the highest death-rates

from this disease were in Herefordshire 0·21, Derbyshire 0·22, Essex 0·23, Lincolnshire 0·28, North Riding of Yorkshire 0·30, and East Riding 0·35. The average death-rate from diphtheria in the 76 great towns was equal to 0·15 per 1000 of their aggregate population. In five of these towns no deaths from this disease occurred in the course of the quarter. The great towns in which diphtheria showed the highest fatality were the following:—Salford 0·36, Halifax and Hull 0·44, Derby 0·45, and Walthamstow 0·50 per 1000 of the several populations. In the 142 smaller towns the mortality from this disease averaged 0·14 per 1000, the rate being highest in Erith, Aberdare, Worthing, and Lincoln. In the remainder of England and Wales, diphtheria was fatal in the average proportion of 0·12 per 1000 living. Among registration sub-districts outside the 218 chief towns, diphtheria was especially fatal in Grays.

Scarlet fever accounted last quarter for the deaths of 903 persons, and for a death-rate of 0·11 per 1000 living, or 0·01 per 1000 less than the decennial average rate for the second quarter. Twelve of the counties of England and Wales were free from scarlet fever mortality. Among counties with populations exceeding 100,000 persons, the highest rates were 0·15 in Cheshire, and in Lancashire, 0·16 in Bedfordshire, 0·21 in Leicestershire, and 0·23 in Middlesex and in the West Riding of Yorkshire. In the 76 great towns scarlet fever accounted for an average mortality equal to 0·13 per 1000 annually. No deaths from this disease were recorded in sixteen of these towns. The highest scarlet fever death-rates were 0·33 in Leicester, 0·34 in Birkenhead, 0·37 in Tottenham, 0·42 in Hanley, 0·57 in Sheffield, and 0·66 in Rotherham. In the 142 smaller towns scarlet fever was fatal in the average proportion of 0·10 per 1000 living, and caused the highest mortality in Edmonton, Chadderton, Wolstanton, Barnsley, and Heywood. In the remainder of England and Wales this disease caused an average death-rate equal to 0·08 per 1000 living. Among registration sub-districts outside the 218 chief towns, scarlet fever was especially fatal in Hemsworth Western.

“*Fever*” (including the three chief forms—*typhus*, *enteric fever*, and ‘*pyrexia*’ of uncertain origin) was the registered cause of 507 deaths last quarter, equal to an annual death-rate of 0·06 per 1000 of the population, or 0·04 per 1000 less than the average rate in the second quarters of the previous ten years. No deaths from fever were returned from seven of the counties; among counties with populations exceeding 100,000 persons, the highest county fever rates were 0·10 in Surrey, 0·11 in Lancashire, Monmouthshire, and Carnarvonshire, 0·13 in Carmarthenshire, and 0·15 in the East Riding of Yorkshire. In the 76 great towns fever caused an average mortality equal to 0·06 per 1000 annually. In 15 of these great towns no deaths from fever occurred; the towns with the highest fever death-rates were Swansea 0·17, Wigan 0·18, Bolton and Rotherham 0·20, and Great Yarmouth and Stockton on Tees 0·23 per 1000 of the respective populations. In the 142 smaller towns fever caused an average mortality equal to 0·05 per 1000 annually. In the remainder of England and Wales, the death-rate from fever averaged 0·06 per 1000.

Small-pox was fatal to 1 person last quarter, as compared with 32, 4, 4, and 3 persons in the four quarters immediately preceding.

Violent Deaths.

The deaths in England and Wales that were referred to different forms of violence, either accidental or otherwise, numbered 4,865 last quarter, and corresponded to an annual rate of 0·56 per 1000 of the population, against an

average of 0·60 in the ten preceding second quarters. In registration counties with populations exceeding 100,000 persons, the lowest death-rates from violence were 0·31 in Wiltshire and in Carnarvonshire, 0·37 in Leicestershire, and 0·38 in Northamptonshire, Bedfordshire, and Shropshire; the highest rates were 0·67 in the North Riding of Yorkshire, in Durham, and in Glamorganshire, 0·74 in Northumberland, 0·75 in Herefordshire, and 0·79 in Glamorganshire. In the 76 great towns the mean rate was 0·56 per 1000 living; among the several towns the rate was only 0·05 in Hornsey, 0·06 in Handsworth (Staffs.), 0·11 in West Hartlepool, 0·26 in Gateshead, and 0·27 in Leyton and in Plymouth; but it rose to 0·76 in Cardiff, 0·78 in Blackburn, 0·79 in St. Helens, 0·82 in Rhondda, 0·89 in Tynemouth, 0·97 in South Shields, and 1·06 in Wallasey.

Certification of Causes of Death.

Of the 125,387 deaths registered in England and Wales last quarter, the causes of 114,659, or 91·4 per cent., were certified by registered medical practitioners, and the causes of 8,776, or 7·0 per cent., by coroners after inquest; whilst the causes of the remaining 1,952, or 1·6 per cent., were not certified, the average proportion of uncertified deaths in the ten preceding second quarters having been 1·8 per cent. Among registration counties with populations exceeding 100,000 persons the proportion of uncertified deaths was less than 1 per cent. in London, Surrey, Sussex, Middlesex, Wiltshire, Gloucestershire, Cheshire, the East Riding of Yorkshire, and Glamorganshire, but it reached 3·3 in Bedfordshire, Durham, and Cumberland, and 4·2 in Carnarvonshire. In the 76 great towns the mean proportion of uncertified deaths was 1·1 per cent.; but whilst no uncertified deaths were registered in Croydon, Hornsey, Tottenham, Brighton, Bournemouth, Southampton, Great Yarmouth, Plymouth, Devonport, Walsall, Derby, Wallasey, Oldham, York, and Merthyr Tydfil, the proportion per cent. rose to 4·0 in Blackburn and in Preston, 5·3 in Gateshead, 5·7 in South Shields, and 7·0 in Barrow in Furness.

Inquests.

Inquests were held in England and Wales concerning 8,776, or 7·0 per cent. of the total deaths, the mean proportion in the ten preceding second quarters having been 6·6 per cent. In the 76 great towns the proportion of inquest cases was 8·0 per cent., ranging from 2·3 in Gateshead, 2·8 in Handsworth (Staffs.), 3·3 in Warrington, 3·4 in Kings Norton, and 3·5 in Preston and in West Hartlepool, to 10·0 in Portsmouth, 10·1 in London, 10·6 in West Ham and in Tynemouth, 14·2 in Tottenham, and 14·5 in Southampton.

Deaths in Public Institutions.

The total deaths registered in England and Wales include 23,656, or 18·9 per cent., that occurred either in workhouses, in hospitals, or in lunatic asylums, the mean proportion of deaths in such institutions in the ten preceding second quarters having been 15·7 per cent. In the 76 great towns the deaths in public institutions averaged 25·1 per cent. of the total deaths, the lowest percentages in the several towns being 4·7 in Rhondda, 5·5 in Handsworth (Staffs.) and in Smethwick, 7·3 in Hornsey, and 7·8 in Kings Norton; and the highest 23·7 in West Ham, 23·8 in Bootle, 24·6 in Manchester, 26·6 in Brighton, 29·9 in Liverpool, and 39·6 in London.

LONDON.

The figures in Tables V. and VI. include the deaths of Londoners in the Metropolitan workhouses, hospitals, and lunatic asylums situated outside the County of London, but exclude the deaths of persons not belonging to London that occurred in the London Fever Hospital, in the Metropolitan Asylums Board Hospitals, and in the Middlesex County Lunatic Asylum, within the County of London. The death-rate, thus computed, was equal to 14·8 annually per 1000 living (Table VI.). If, however, all the deaths of non-Londoners that occurred in hospitals or other public institutions in London be excluded, the death-rate will not exceed 14·2 per 1000. Table X. shows the death-rate in London after this further correction has been applied; and, since the registered mortality in many London districts is seriously affected by the deaths in hospitals and other public institutions, the death-rates in the Metropolitan Boroughs are also shown, corrected by the distribution of all deaths in public institutions to the Boroughs to which the deceased persons had belonged.

EDINBURGH, GLASGOW, DUBLIN, AND BELFAST.

The annual birth and death-rates per 1000 living in these towns last quarter were as follows :—

	Birth-rate.	Death-rate.
Edinburgh	24·1	17·1
Glasgow... ..	31·6	18·3
Dublin	29·7	21·4
Belfast	33·4	21·4

COLONIAL AND FOREIGN CITIES.

The Registrar-General has been favoured with weekly returns of vital statistics by the authorities of 27 of the principal Colonial and Foreign Cities. From these a summary has been constructed for the past quarter (Table XII.). Excluding the Indian cities, the highest and lowest annual birth and death-rates during the second quarter of 1906 were as follows :—

BIRTH-RATES.

	Highest per 1000 living.		Lowest per 1000 living.
Trieste	31·2	Brussels	18·6
Breslau	31·0	Paris	19·3
Munich	29·1	Antwerp	22·4
Bucharest	28·0	Prague	22·7
St. Petersburg	26·8	Toronto	23·4
Christiania	26·8	Berlin	23·5
London ...		27·0	

DEATH-RATES.

—	Highest per 1000 living.	—	Lowest per 1000 living.
Moscow	34·2	Antwerp	13·6
St. Petersburg	28·9	Christiania	13·8
Trieste	25·9	Chicago	14·2
Bucharest	22·9	Amsterdam	14·2
Breslau	22·5	Brussels	14·3
Prague	22·2	Toronto	14·5
London ...		14·8	

Small-pox caused 34 deaths in Moscow, 21 in St. Petersburg, 6 in New York, 4 in New Orleans, 2 in Antwerp, and 1 in Paris.

Measles was most fatal in proportion to population in St. Petersburg, Antwerp, Vienna, Berlin, Amsterdam, and New York; *scarlet fever* in St. Petersburg, Buda Pesth, Chicago and Moscow; *diphtheria* in St. Petersburg, New York, Christiania, Toronto, Philadelphia, and Moscow; *whooping-cough* in Trieste, Copenhagen, Hamburg, and Philadelphia; “*fever*” in St. Petersburg and Philadelphia; and *diarrhœal diseases* in Moscow, St. Petersburg, New Orleans, Breslau, and Munich.

Infantile Mortality.—Among those cities for which the figures are available, the proportion of deaths among children under one year of age to 1000 registered births ranged from 80 in Christiania, 91 in Paris, 106 in Amsterdam, and 108 in Stockholm, to 188 in Toronto, 193 in Munich, 202 in Prague, 209 in Vienna, 210 in Bucharest, and 223 in Breslau.

INDIAN CITIES.—The death-rate was equal to 32·2 per 1000 in Calcutta, 40·8 in Madras, and 78·9 in Bombay. *Small-pox* caused 1006 deaths in Calcutta, 214 in Madras, and 133 in Bombay; *measles* caused 586 deaths in Bombay, 138 in Madras, and 42 in Calcutta. Under the heading “*fever*” 8,778 deaths were classed in Bombay, 2,701 in Calcutta, and 1,143 in Madras, including respectively, 7,376 and 1,431 deaths from *plague* in Bombay and Calcutta. The mortality from *diarrhœal diseases* was excessive in each of these Indian cities; *Asiatic cholera* caused 662 deaths in Calcutta, 339 in Bombay, and 16 in Madras.

RETURNS OF NOTIFIED CASES OF INFECTIOUS DISEASE.

At the request of the Local Government Board, and of the London County Council, and on their responsibility with respect to accuracy, tables have been inserted, in continuation of those published in previous returns, showing the numbers of cases of infectious sickness notified, under Act of Parliament, to the Sanitary Authorities of certain of the largest towns in England and Wales, during the second quarter of the year 1906 (*see* pages xxvii—xxxii).

TABLES.

TABLE I.—**Marriages, Births, and Deaths** registered in **England and Wales** in the Years **1896-1906**, and in each Quarter of those Years.

YEAR - - -	1896	1897	1898	1899	1900	1901	1902	1903	1904	1905	1906
Marriages- - -	242,764	249,145	255,379	262,334	257,480	259,400	261,750	261,103	257,856	260,489	—
Births - - -	915,331	921,683	923,165	928,646	927,062	929,807	940,509	948,271	945,389	929,457	—
Deaths - - -	526,727	541,487	552,141	581,799	587,830	551,585	535,538	514,628	519,784	519,939	—
Quarter ended the last day of	MARRIAGES.										
March- - -	43,266	44,708	45,143	44,512	43,917	43,862	54,056	45,584	44,968	45,180	45,482
June - - -	65,938	68,844	70,108	72,889	71,518	72,173	82,463	73,096	71,518	70,927	—
September- -	65,057	65,927	66,497	72,016	69,772	72,201	71,511	71,958	71,271	72,726	—
December - -	68,503	69,666	73,631	73,417	72,273	71,164	73,720	70,465	70,099	71,706	—
Quarter ended the last day of	BIRTHS.

TABLE V.—76 Great Towns.—Population: Births, Deaths, and Meteorology in the 13 Weeks ended 30th June, 1906.
NOTE.—The 76 Great Towns are those with populations exceeding 50,000 persons at the Census of 1901. They are arranged in the order of the Registration Districts in which they are situated, those towns included in the Outer Ring of the Metropolitan Police District being placed, for convenience, immediately after London. The Registrars alone must be considered responsible for the accuracy of the figures upon which these returns are based.

TOWNS.	ESTIMATED POPULATION middle of 1906.	BIRTHS.	DEATHS.	The DEATHS registered include																MEAN TEMPERATURE (De- grees Fahr.).	RAIN- FALL (Inches).	TOWNS.	
				Deaths of				Deaths from								Deaths in Public Institutions.							Uncertified Causes of Death.

TABLE VII.—One hundred and forty-two smaller Towns.—Population; Births and Deaths in the QUARTER ended 30th June, 1906.

NOTE.—The 142 Smaller Towns are those with populations of 20,000 but not exceeding 50,000 persons at the Census of 1901. They are arranged alphabetically under the Registration Counties in which they are situated. The Registrars alone must be considered responsible for the accuracy of the figures upon which these Returns are based.

In this Table 0.00 indicates that the deaths were too few to give a rate of 0.005; where *no death* occurred, — is inserted.

Note.—The figures for the County of London do not in all cases agree with those in Tables V. and VI., pp. xvi. and xix.; for explanation, see page x.

* Formerly described as "Simple Continued Fever."

The Registration Districts, 635 in number, are collections of contiguous Parishes or Places, combined for purposes connected with the Registration of Births, Deaths, and Marriages, and are nearly always identical with the Poor Unions of the same names; they are here arranged topographically under the Registration Counties.

^a See page 2, note ^b.

^b For London, the births and deaths given for the quarter are derived from the Weekly Returns made by the Registrar-General.

II.—SOUTH EASTERN COUNTIES.—REGISTRATION DISTRICTS.

Registration Districts.		Area in Statute Acres.	Enumerated Population, 1901.	Marriages Registered in Quarter ended 31 Mar. 1906.	Births Registered in Quarter ended 30 June 1906.	Deaths		The DEATHS in the Quarter are stated by the Registrars to include

The Registration Sub-districts (2037 in number) are sub-divisions of the Registration Districts in which the Births and Deaths are registered by Registrars severally appointed for that purpose. The letter W denotes that the Sub-district is within its limits a Workhouse belonging to the District or Union; W indicates a Workhouse belonging wholly or partly to other Districts than that in which it stands; F a Hospital for Infectious Diseases; H another Hospital, Lunatic Asylum. When a sub-district contains more than one institution of either kind, the number is indicated by a figure prefixed to the letter.

* See page 6, note b.

METEOROLOGY.

REMARKS ON THE WEATHER OVER THE UNITED KINGDOM DURING THE
QUARTER ENDED JUNE 30TH, 1906.

EXTRACTED FROM THE
MONTHLY WEATHER REPORTS
OF THE
METEOROLOGICAL OFFICE

BASED ON OBSERVATIONS AT 152 STATIONS,

TOGETHER WITH TABLES OF METEOROLOGICAL DATA AT 58 STATIONS
IN ENGLAND AND WALES, AND THE ENGLISH CHANNEL.

APRIL, 1906.

General Summary.—The atmospheric conditions which were in the ascendant during this month were somewhat exceptional in character. There was an unusual succession of areas of high barometric pressure, embracing these islands and a considerable part of the Continent, and on our own coasts they were more numerous than in any month for a long time past. In consequence of the great extent of the anticyclonic systems many of the disturbances of the period were found far to the southward, over the Mediterranean and North African region, or in the extreme north, beyond the Arctic Circle. The cyclonic disturbances which visited our shores were as a rule shallow and possessed of comparatively little energy. Although, therefore, the wind occasionally increased to a fresh or strong breeze the month was marked by an almost entire absence of gales in every part of the country, the force of a fresh gale being experienced at only a few isolated stations. The dry weather which set in after the middle of March was maintained with even greater intensity in April, an absolute drought of more than a fortnight's duration being experienced in many localities, at Plymouth during the 35 days ending with April 22nd. Over England, N.W., S.W., the Midland Counties and Ireland, S., each of the five successive weeks down to April 21st, returned no precipitation or a considerable deficiency of rain, all other districts having four dry weeks. Towards the close of the month a less settled type prevailed, and rain, hail, sleet or snow showers were of common occurrence. But the most striking feature of April was its remarkable and persistent brilliancy all over the kingdom. The first half of the month was exceptionally sunny, and in the second week the bright sunshine records at various stations in Scotland and Ireland, as well as in England, amounted to 70 per cent. and upwards of the possible duration to 80 per cent. at Bournemouth, and to 82 per cent. at Torquay. Even with the less settled weather towards the close there was still an abundance of sunshine, so that the results show the month to have been, generally speaking, the brightest April since the introduction of automatic recorders in 1881. Notwithstanding the abnormally large sunshine records the air temperature decreased very decidedly after the middle of the month, the general mean for the whole country for the first half of the period being nearly 2° in excess, while for the second half it was nearly 4° in defect. Severe ground frosts occurred in many localities towards the close. Thunderstorms occurred in various parts of England on the 12th, 13th, 22nd, 24th, 28th, 29th, and 30th; at Llandale on the 21st, and in Ireland on the 29th. Thunder was reported at Llandudno on the 1st. For the month as a whole pressure exceeded the normal; the winds varied greatly in direction and were of no great strength; temperature and rainfall were deficient; and bright sunshine showed a considerable excess.

Pressure.—*Mean at 8 a.m.* ranged from 30·17 ins. at Valencia to 29·92 ins. at Sumburgh Head. All the values were above the average, by 0·10 in. in the Shetlands, and as much as 0·29 in. at Valencia. The general distribution differed from the normal, the highest pressure being in the south-west instead of in the south-east. *Highest* readings were 30·73 ins. at Aberdeen on the 8th, and 30·74 ins. at Donaghadee and Shields on the 9th. On numerous days there were values above 30·2 ins., on the 14th about 30·6 ins. along the English Channel. *Lowest* readings occurred on the 28th and 29th, 28·53 ins. at Stornoway and below 29 ins. at other northern and north-western stations. There were few other occasions with readings below 29·5 ins. *Range* was moderate, from 1·1 in. at Jersey to 1·7 in. at Stornoway, Malin Head, and Donaghadee.

Depressions.—Most of the cyclonic systems had their centres far outside these islands. Shallow ones crossed the south-west of England on the 5th, and the south of Scotland on the 16th, but the most important and deepest areas were the three which in the last week came down from the Iceland region and followed an almost identical path across Wales to the north-west of France. The first of the three appears to have continued its course from France eastward to Transylvania, then north-westward to the Norwegian coast.

Anticyclones.—The month was remarkable for its persistently anticyclonic character, the systems in all cases moving in upon us from the Atlantic, and as a rule passing eastward across the country. The area which passed east between the 8th and 10th was of unusual intensity for the time of year, the barometer rising above 30·7 ins. at many stations.

Winds.—The wind direction was very variable, mainly from points in the Northern half of the compass over Southern England, the Western half in Ireland, and the South-Western quarter in Scotland. Days with gale force numbered 3 at Deerness and Scilly, 2 at Durham, Woburn and Roche's Point.

Temperature.—*Mean at sea level* ranged from 48·5° at Jersey and Scilly, and above 45° over the greater part of the country, to below 42° in the Orkneys and Shetlands. The actual values were in nearly every instance below the average, the deficiency ranging upwards to nearly 3° at Shoeburyness and Birr Castle. *Highest* readings were recorded on varied dates, but mainly between the 9th and 12th, 76° at Woburn, 75° at Maidenhead, 73° at Epsom, and 72° at Clathick. *Lowest* values occurred on the 19th in Scotland and Ireland, on irregular dates in England, 18° at Garforth (8th), 19° at Wokingham (15th), 20° at Buntingford (26th), 21° at Balmoral (19th), and Lairg (20th). *Range* generally was very large, exceeding 40° at numerous stations amounting to 50° at Lairg, 51° at Maidenhead, 52° at Wokingham, and 53° at Woburn. At Falmouth it was 22°, and at Scilly 18°. *Vapour Pressure* ranged from 0·20 in. at Birmingham (9 a.m.), and Armagh and Garforth (9 p.m.) to 0·27 in. at Scilly (6 p.m.). *Relative Humidity* was as low as 61 per cent. at Westminster (6 p.m.), elsewhere it ranged from 68 per cent. at Southampton and Manchester (9 a.m.) to 88 per cent. at Birr Castle (8 a.m.) and Laudale (9 p.m.). *Mean Earth Temperature* at 1 ft. depth ranged from 42° at Garforth and Sheffield to 48° at Plymouth; and at 4 ft. depth from 42° at Sheffield to 47° at Bath.

Rainfall.—Over the greater part of the north and north-west of Scotland and in the north-west of Ireland, the precipitation was above the average, by nearly 2 ins. at Glencarron, but over the country generally there was a deficiency, the loss exceeding an inch in many places, and amounting to as much as 2·2 ins. at Roche's Point. The aggregates for the month ranged from 7·3 ins. at Glencarron and 4·8 ins. at Laudale to 0·4 in. at Buntingford, Colly Weston and Oxford, and 0·3 in. at Skegness. Precipitation was measured on 21 days at Glencarron, and 20 days at Sumburgh Head, Fort William and Edenfel, but at a large number of stations on less than 10 days, at Bognor and Kew on 6 days, and at Colly Weston on 5 days. With the exception of 1·7 in. at Glencarron, on the 20th, there was no fall of as much as an inch on any day, the amounts as a rule being very small.

Bright Sunshine.—The month was an unusually brilliant one, so that the duration of bright sunshine was everywhere above the average, three-fifths of the stations showing an excess of more than 60 hours, Torquay 92 hours, and Westminster 93 hours. The total duration ranged from 125 hours (30 per cent. of the possible) at Newcastle-on-Tyne to 272 hours (66 per cent.) at Falmouth. At numerous stations the aggregates exceeded 250 hours.

MAY, 1906.

General Summary.—The weather during May was of a much more variable and unsettled character than had been experienced in the immediately preceding months, but it was far from being stormy. Areas of high and of low pressure were rather numerous, and their movements somewhat erratic, but as both the anticyclonic and the cyclonic systems were of very slight intensity the winds were very variable in direction and of no great strength. On many days, and especially between the 12th and 21st, pressure was highest to the westward, northward, and north-eastward, producing a marked prevalence of winds from between North-West and North-East, which had a decidedly adverse influence on the day temperatures. Days with the thermometer well above 70° were exceptionally rare, while afternoon maxima below 50° were reported in some part of the country nearly every day. At Sumburgh Head the highest point reached on the 16th was only 40° , and even so far south as Holyhead the maximum on the 25th was no higher than 50° . Generally speaking, the nights were relatively milder than the days, but there were several in which frost occurred in the shade, minima between 28° and 32° being registered as late as the morning of the 22nd in England, Ireland, and Scotland. Sharp ground frosts were frequently experienced in many localities, particularly at the commencement and in the third week. Normally, May is the brightest month of the year, but the period now under review was exceedingly dull, the sunshine records showing a loss of from one to nearly four hours per day, the total duration being, roughly, little more than one-half of what the country received in April. During the first half the weather was rather dry in the southern districts, but it did not amount to a drought, London returning 12 consecutive rainless days. A very heavy rainstorm occurred over the north-eastern counties of England on the 19th, the fall exceeding 2 ins. in places. Thunderstorms were rather frequent, but as a rule of no great intensity. That of the evening of the 8th was very severe in the Thames Valley, the accompanying rainfall being exceedingly variable, ranging upwards from really nominal amounts to as much as 2 ins. Many parts of England and Wales were visited by thunderstorms on the 13th, with hail and sleet in several localities, snow at Salisbury. Fog was rather frequent on the south-western coasts and at Deerness. For the month as a whole pressure, temperature, and bright sunshine were below, and rainfall generally above the normal; and the winds varied greatly in direction. Earthquake shocks were felt at Fort William on the evening of the 7th, and, according to newspaper reports, at Guernsey on the afternoons of the 8th and 14th. Destructive earthquakes had previously visited San Francisco, Peru, Formosa, &c., and there had been great volcanic eruptions of Vesuvius and Hekla.

Pressure.—*Mean at 8 a.m.* ranged from 29.90 ins. at Jersey to 29.79 ins. at Blacksod Point and Nairn, the central space of a shallow low pressure area extending from the north-west of Ireland to the north-east of Scotland, and to this extent differing from the usual distribution. The values were in all cases below the average, by 0.10 in. at Sumburgh Head and Jersey, and 0.17 in. at Blacksod Point. *Highest* values were 30.29 ins. at Jersey on the 4th, and 30.26 ins. on the 29th; 30.25 ins. at Blacksod Point on the 13th, and at Stornoway on the 14th. *Lowest* readings were 29.20 ins. at Malin Head on the 2nd, 29.36 ins. at Aberdeen on the 16th, and 29.35 ins. at Stornoway on the 31st. *Range* consequently was unusually small, from an inch at Blacksod Point and Malin Head, to 0.6 in. at Liverpool and Pembroke.

Depressions.—The disturbances were numerous but shallow, most of them having their centres beyond the western and northern coasts and beyond the North Sea.

Anticyclones.—Although our weather was on several occasions under the influence of high pressure systems the centres of all these were situated well outside the country, either on the Continent, between Spain and Scandinavia, or out on the ocean to the westward or northward.

Winds.—The results were in accordance with the mean distribution of pressure, North-Easterly breezes were the most frequent in the north-west and north, Southerly or South-Westerly elsewhere, but the distribution between the several points of the compass was more uniform than usual. Gale force was felt on 5 days at Deerness, and on 3 days at Laudale.

Temperature.—*Mean at sea level* ranged from above 53° at several stations in the south of England to below 45° in the Orkneys and below 44° in the Shetlands. The actual values were below the average, except at various stations in eastern England, the deficiency being considerably more than 3° in north-western Scotland. *Highest* readings occurred on very varied dates, but mainly about the 8th in England—77° at Southampton and 76° at Epsom and Maidenhead—the 13th in Scotland and Ireland—73° at Dumfries, 71° at Waterford, and 68° at Cally. *Lowest* values were also registered on numerous dates, mostly in the first half of the month, 23° at Balmoral (11th), 24° at Garforth (2nd), 25° at Llangammarch Wells (1st) and Lairg (2nd), and below the freezing point at many other stations. *Range* amounted to 50° at Maidenhead, 49° at Wokingham, and exceeded 40° in numerous other localities in England, Scotland and Ireland, but at Sumburgh Head it was 18°, and at Scilly only 16°. *Vapour Pressure* ranged from 0·35 in. at Lincoln (9 a.m.) and Westminster (6 p.m.) to 0·24 in. at Sumburgh Head and Wick (8 a.m.). *Relative Humidity* ranged from 93 per cent. at Malin Head (8 a.m.) and 92 at Dunmow (9 p.m.) to 73 at Dublin, Trinity College (9 a.m.), and Yarmouth (6 p.m.). *Mean Earth Temperature* at 1 ft. depth ranged from 54° at Plymouth to 47° at Birmingham; and at 4 ft. depth from 50° at Bath to 45° at Birmingham, Garforth and Sheffield.

Rainfall.—Except at a few stations in the eastern half of England the rainfall was in excess of the average, by more than 3 ins. at some stations, and by as much as 5·5 ins. at Alnwick Castle, where the month's aggregate total was 7·7 ins., while Port Talbot returned 7·2 ins., Marchmont 7·1 ins., and many other places 5 ins. and upwards. The smallest totals were 1·2 in. at Bawtry, Fulbeck, Rothamsted and Wisley, and 0·9 in. at Spurn Head. In a heavy rainstorm over the north of England on the 19th many places received over an inch, 2·2 ins. at Seaham, 2·4 ins. at Alnwick Castle, and 2·5 ins. at Shields. There was also a fall of 2·5 ins. at Port Talbot on the 5th, but there were few other instances of more than an inch in a day. Precipitation was measured on 30 days at Lairg, 27 at Crathes, and ranging down thence to 8 at Westminster and 7 at Southend-on-Sea.

Bright Sunshine.—Almost without an exception the bright sunshine records were below the average, by from 2 to more than 3 hours per day at a large number of places, the greatest loss being 103 hours at Cronkbourne and 115 hours at Stonyhurst. The percentage of possible duration ranged from 14 at Bettws-y-Coed and Fort Augustus to 45 at Ramsgate and 46 at Broadstairs.

JUNE, 1906.

General Summary.—Under the influence of a small secondary disturbance, the opening day of the month was of a very changeable character, with showers in many localities, fresh to very strong Northerly winds on the western coasts, and thunderstorms over nearly the whole of England. Thenceforward for a period of three weeks the distribution of atmospheric pressure was almost continuously anti-cyclonic, so that the entire country experienced a great deal of very fine, bright weather, with light variable breezes. During the first week the duration of bright sunshine amounted to 70 per cent. and upwards of the possible at many stations in the southern half of England, and to as much as 86 per cent. in Jersey. The fine weather was interrupted by only a few unimportant thunderstorms in various parts of England. A striking feature, however, was the almost complete absence of afternoon temperatures much above the normal, maxima as high as 80° being unusually rare in such favourable circumstances at Midsummer. The remainder of the month was of a much more unsettled type, mainly owing to the passage of a slow-moving disturbance up the western coasts, and a shallow depression which moved eastward across the southern counties of England. Rain became more frequent, but there was no increase in the thunderstorm frequency. At times the days were rather cold, sleet being reported at Edinburgh on the 24th, and at Wick on the 28th. The depression of the 28th–29th was accompanied by a very heavy and continuous

rain at many southern stations, the rainfall, which covered a period of about eleven hours, amounting to between 2 ins. and 2½ ins. in and around London. During the progress of this unusual downpour the only thunderstorm appears to have been at the eastern extremity of Kent, but the accompanying North-East wind blew very strongly. Taking the month as a whole, pressure was everywhere well in excess of the normal: the winds varied considerably in direction, but were largely from between East and North over the greater part of England; temperature was above the average in the N., but below it at most places in the S. districts; rainfall was in excess over the south of England, in defect elsewhere; and bright sunshine was above the normal at nearly every station. Between 9.45 a.m. and 10 a.m. on the 27th earthquake shocks were experienced in South Wales, and in many of the western and south-western counties of England they were of a somewhat severe character for this country and occasioning a considerable amount of structural damage. According to newspaper reports slight shocks were felt at Maxwelltown, Dumfries, on the 15th, and at Croydon and in Carnarvonshire on the 29th.

Pressure.—*Mean at 8 a.m.* ranged from 30.03 ins. at Sumburgh Head to 30.17 ins. at Jersey. The values were everywhere above the average; by 0.11 in. at Dungeness and Yarmouth, and by as much as 0.17 in. at Stornoway. The general distribution differed somewhat from the normal. *Highest* readings occurred on the 4th and 5th, 30.42 ins. at Stornoway and Aberdeen, and on the 20th, 30.44 ins. at Jersey. *Lowest* values were recorded on the 1st, 29.34 ins. at Malin Head, and on the 26th, 29.44 ins. at Stornoway. *Range* was small, from 0.6 in. at Scilly and Valencia, to 1.05 in. at Malin Head.

Depressions.—The centres of only a few disturbance visited these islands or approached the coasts, most of the low pressure areas of the month being found over the eastern and northern parts of Europe. The depression of the 28th–29th appears to have originated over the south-west of Europe, forming a well-developed cyclonic system by the time it reached the Straits of Dover.

Anticyclones.—From the 2nd to the 22nd areas of high pressure prevailed over the country generally, there being only a few instances of barometer readings as low as 30 ins. The mercury rose above 30.4 ins., on the 4th and 5th, on the north and east coasts, and on the 20th and 21st at some of the English Channel stations.

Winds.—North-Westerly to South-Westerly breezes prevailed over Scotland, and winds from between East and North over the Southern and Eastern districts of England, elsewhere the direction was rather more variable. The conditions were so quiet that Betws-y-Coed was the only station where the force of a gale was attained.

Temperature.—*Mean at sea level* ranged from about 60° at Killarney and Clifton, and above 59° at a number of stations over the inland parts of England, and in the south of Ireland and of Scotland to below 54° in the extreme north of Scotland, and 50.5° in the Shetlands. The actual values were in excess of the average over Scotland and at most stations in the north of England and south of Ireland, in defect over the east and south-east of England, and about equally divided between excess and defect over the Midlands and south-western England and the north of Ireland. At a few stations there was an excess of more than 2°, as much as 3° at Killarney, a few others had a similar deficiency, 2.7° at Dungeness. *Highest* readings were 83° at Dumfries (12th), and Maidenhead (23rd), 82° at Clathick (11th), Kew and Epsom (23rd), 81° at Oxford (23rd), and 80° at Leith (12th), Southend (21st), and Wisley (23rd). *Lowest* values were 29° at Wokingham, 30° at Garforth, 32° at Woburn, and under 33° at Cambridge, Oundle (all on the 5th), and at Balmoral (16th). *Range* exceeded 40° at a large number of stations, amounting to 47° at Garforth, Epsom, and Maidenhead, and 50° at Wokingham, but it was only 17° at Portland Bill, and 16° at Scilly. *Vapour Pressure* ranged from 0.43 in. at Nottingham (6 p.m.) to 0.315 in. at Sumburgh Head (8 a.m.). *Relative Humidity* was as high as 91 per cent. at Cockle Park (9 p.m.), and as low as 67 per cent. at Jersey (6 p.m.). *Mean Earth Temperature* at 1 ft. depth ranged from 61° at Plymouth to 54° at Birmingham; and at 4 ft. depth from 56° at Bath to 49° at Garforth.

Rainfall.—Owing to the very heavy rainstorm on the 28th, the total fall for the month was above the average at many stations in the southern half of England, but with the exception of Foynes and Killarney, all other localities returned a deficiency. The excess was more

than an inch at Rothamstead, Hillington, and Cambridge, and the deficiency amounted to 2 ins. at Clathick, and 2·5 ins. at Fort William. The largest aggregates for the month exceeded 3 ins. at several English and Irish stations, 3·5 ins. at Hillington, Woburn and Valencia, and 3·6 ins. at Cambridge; the smallest aggregates were in Scotland, 0·6 in. at Balmoral, Crathes, Fort Augustus and Wick, and 0·5 in. at Laudale. Nearly all the stations in the south of England received more than an inch on the 28th, Westminster 2·1 ins. Rothamsted 2·2 ins. and 2·4 ins. at Kew. On the 17th Killybegs had 1·3 ins. No other day yielded an inch anywhere. Rain fell on 17 days at Manchester (Whitworth Park) and Killybegs, on less than 10 days at a large number of stations, 5 at Portland Bill, 4 at Guernsey (Villa Carey).

Bright Sunshine.—The duration of bright sunshine exceeded the average at nearly every station, by 64 hours at Westminster, 59 hours at Southampton, and 58 hours at Ventnor Hospital. The percentage of possible duration ranged from 26 at Stornoway, and 27 at Deerness, to 56 at Jersey, Guernsey (Brooklyn), Bournemouth, Southampton, and Eastbourne.

TABLES OF METEOROLOGICAL DATA FOR ENGLAND AND WALES AND THE ISLANDS IN THE ENGLISH CHANNEL.

*Prepared in the Meteorological Office under the direction of
W. N. Shaw, Sc.D., F.R.S.*

In compiling the following Tables (pp. 80 to 89) the stations have been grouped into eight Districts, namely, 1. London; 2. England, Central; 3. England, South; 4. England, East; 5. England, North-East; 6. England, North-West with North Wales; 7. England, South-West with South Wales; 8. The Islands in the English Channel. Each of these Districts is represented by a number of stations ranging from 3 to 12.

In making a selection from the whole number of stations available, endeavour has been made to represent as far as possible the various meteorological conditions of the several districts. Regard has been had not only to uniformity of geographical distribution, but also to the situation of the stations with regard to the sea coast, their height above sea level, and to their special characteristics as representing urban, suburban, or rural meteorological conditions.

Observations of earth temperature and of wind-force are included in the Tables. The wind observations at Falmouth and Kew are based on the records of a standard Robinson anemometer (factor 2.2). Velocities of between 13 and 38 miles in the hour have been entered in the Tables as strong winds, velocities of 39 miles in the hour, or above, as gales. At the remaining stations the wind-force observations are personal estimates in accordance with Beaufort's scale, and are specially liable to be affected by local circumstances. No previous comparison of corresponding data is available for the purpose of checking the results.

The stations selected, with the names of the Observers, are shown below.

LIST OF STATIONS AND OBSERVERS.

Station.	Observer.	Station.	Observer.
1. LONDON:—		3. ENGLAND, S.:—	
Greenwich ..	The Royal Observatory.	Southampton ..	A. Vaughan, for Director General of Ordnance Survey.
Kew	The Kew Observatory (National Physical Observatory).	Portsmouth ..	A. Mearns Fraser, M.D., M.O.H., for the Corporation.
Barnet	T. H. Martin, A.M.I.C.E.	Brighton ..	A. Newsholme, M.D., M.O.H., for the Corporation.
Camden Square	H. Robert Mill, D.Sc., LL.D.	Ventnor ..	Miss Gibson, for Royal National Hospital for Consumption.
Westminster ..	The Meteorological Office.	Portland Bill ..	The Meteorological Office.
Norwood ..	W. Marriott.	Eastbourne ..	S. R. Henderson, for the Corporation.
2. ENGLAND, CENTRAL:—		Salisbury ..	Thos. Challis, for the Earl of Pembroke.
Sheffield ..	E. Howarth. The Weston Park Museum.	Canterbury ..	A. Lander
Nottingham ..	Arthur Brown, M.Inst.C.E., and Philip Boobbyer, M.D., M.O.H., for the Corporation.	4. ENGLAND, E.:—	
Wakefield ..	A. Clyde.	Lowestoft ..	C. W. Edwards, for the Corporation.
Birmingham ..	A. Cresswell, for the Midland Institute Observatory.	Clacton-on-Sea	A. W. Shadick, for the Urban District Council.
Coventry ..	E. Hugh Snell, M.D., M.O.H., for the Corporation.	Dunmow ..	Thos. Hacking. The Countess of Warwick's Agricultural School.
Buxton ..	W. Pilkington	Cambridge ..	R. Irwin Lynch, M.A., The Botanic Gardens.
Cheltenham ..	A. C. Saxby, for the Corporation.	Norwich ..	A. W. Preston.
Oxford ..	The Radcliffe Observatory.	(Eaton.)

Cockle Park .. (near Morpeth).	A. G. Birt, for the Nor- thumberland County Council.	Barnstaple ..	Thos. Wainwright. The North Devon Athenæum.
Tealby	Rev. S. Lewin, B.A.	Bath	W. H. Symons, M.D., M.O.H., for the Corporation.
6. ENGLAND, N.W., WITH NORTH WALES:—		Llangammarch Wells.	W. Black Jones, M.D.
Llandudno ..	W. Little, for the Town Council.	8. THE CHANNEL:—	
Liverpool .. (Bidston.)	W. E. Plummer, M.A. Bid- ston Observatory.	Scilly	The Meteorological Office.
Aspatría ..	J. Smith Hill, B.Sc. The Agricultural College.	Jersey	The Meteorological Office.
Manchester ..	J. Niven, M.A., M.B., M.O.H., for the Corporation.	Guernsey ..	Adolphus Collette.
Carlisle.. ..	Studholme Cartmell, for the Corporation.		
Stonyhurst ..	Rev. W. Sidgreaves, S.J. The Observatory.		

DAYS OF "CLEAR SKY" AND "OVERCAST."

A day is reckoned as a day of "clear sky" if the average of the estimates of the fraction of sky covered by cloud at the two hours of observation is less than .2, and as an "overcast" day if the average is greater than .8. At the Royal Observatory, Greenwich, records are kept of days persistently cloudless and days persistently overcast from midnight to midnight. The numbers of such days for the current quarter are:—Clear sky, 1, 0, 0; and Overcast, 0, 0, 0.

Oxford:—The observing hours at Oxford (the Radcliffe Observatory) are 8 a.m., noon and 8 p.m. The results given under Barometer and Hygrometer are the means of the observations at these hours reduced to the means for 9 a.m. and 9 p.m. by corrections deduced from a discussion of the Photographic Continuous Records. (See *Radcliffe Observations*, Vols. XXXIX. to XLV.) The averages used at Oxford are based on observations as follows: Rain, 86 years, 1815–1900; Temperature, 73 years, 1828–1900; Sunshine, 20 years, 1881–1900.

At Greenwich and Oxford the daily rainfall amounts are those for the 24 hours comprising the civil day. At other stations the amounts are those for the 24 hours ending at the time of morning observation; they are entered to the day preceding that of observation.

* The hours of Observation are 9 a.m. and 9 p.m. local time, with the following exceptions. At the stations marked

For all the stations marked a, b, and c, the results under Barometer, Hygrometer and Cloud are based on the mean for districts. For the station marked c, and for Camden Square, where the wind is not observed at 9 p.m., the results are more readily comparable with the results for other stations. They, as well as the numbers of days of "Clear" and "Overcast" are based on observations extending over 35 years, namely:—For Rainfall, 35 years, 1871–1905; for Sunshine, 15 years.)

† At the Royal Observatory the earth temperature is taken at 3 feet 2 inches below the surface; at this station the numbers for the 2nd Quarter as thus calculated, are respectively Clear Sky 1, 0, 0, and Overcast 0, 0, 0. See Note on page 81.

‡ See Footnote, p. 78.

Wind Force.—Beaufort Scale (0–12) is used. The number of observations of moderate and strong wind (force 4 or more)

* At Oxford the observations are taken at 8 a.m., noon, and 8 p.m., see Note on page 79. At all the other stations the observation is 9 a.m. and 9 p.m. local time, with the following exceptions. At the stations marked :—

For all the stations marked a, b, and c, the results under Barometer, Hygrometer and Cloud are based on the for districts. For the station marked c, the results for Wind Direction and Number of Observations of Moderate stations. They, as well as the number of days of "Clear Sky" and "Overcast" at this station, are printed in

† The averages used are obtained from observations extending over 35 years, namely :—For Rainfall, 35 years, 1871–1905; At Belvoir Castle the earth temperature is taken at 3 feet below the surface.

‡ See Footnote p. 79.

(Portland Bill) the observing hours are 8 a.m. and 6 p.m. Greenwich time.
 (Ventnor) the observing hours are 9 a.m. and 3 p.m. local time.
 (Portsmouth) the observing hour is 9 a.m. local time.
 Observations only, and these results are in consequence printed in French type. They have not been included in the means
 and wind have been multiplied by 2 in order to make them more readily comparable with the results for other
 e, but are included in the means for districts.
 temperature, 35 years, 1871-1905; Sunshine, 25 years, 1881-1905.

number of observations of calm and the number of days of gale are given in the table.

INDEX OF URBAN DISTRICTS

As constituted on 30th June 1906 together with a reference to the number of the Registration District and Sub-district in which each is situated. See pages 6-69 of this Return.

Urban Districts which are County Boroughs or Municipal Boroughs are indicated by the letters C or M.B. Those Urban Districts marked * have been created, and the boundaries of those marked have been altered since the Census of 1901.

NOTE.—The exact constitution of each Urban District and of each Registration Sub-district is shown in Tables 9 and 12 respectively of the Census County Volumes. Of the 1,166 Urban Districts (including County, Municipal, and Metropolitan Boroughs) 149 were each co-extensive, at the end of June 1906, with one or more Registration Areas.

COUNTY BOROUGH, MUNICIPAL BOROUGH, AND OTHER URBAN DISTRICTS.	NO. OF REGISTRATION DISTRICT AND SUB-DISTRICT IN WHICH SITUATED.	COUNTY BOROUGH, MUNICIPAL BOROUGH, AND OTHER URBAN DISTRICTS.	NO. QUARTERLY RETURN

OF

MARRIAGES, BIRTHS, AND DEATHS

REGISTERED IN THE DIVISIONS, COUNTIES, DISTRICTS, AND SUB-DISTRICTS OF

ENGLAND AND WALES;

WITH TABLES SHOWING BIRTHS, DEATHS, AND NOTIFIED CASES OF INFECTIOUS
DISEASE IN CERTAIN LARGE TOWNS.

Published by Authority of the Registrar-General.

Printed under the Superintendence of His Majesty's Stationery Office,
AND SOLD BY WYMAN AND SONS, LTD., FETTER LANE, E.C.

No. 231.] **Marriages**—*April, May, June, 1906.* [Price 9d.
Births and Deaths—*July, August, September, 1906.*

*General Register Office, Somerset House,
26th October, 1906.*

UNITED KINGDOM.

The POPULATION of the UNITED KINGDOM in the middle of 1906 is estimated at 43,659,121 persons; that of England and Wales at 34,547,016, that of Scotland at 4,726,070, and that of Ireland at 4,386,035.

In the United Kingdom 292,227 *births* and 161,648 *deaths* were registered in the three months ended 30th September 1906. The natural increase of population was, therefore, 130,579. The number of *persons married* in the quarter ended 30st June 1906 was 176,330.

The birth-rate in the United Kingdom in the *third* quarter of 1906 was 26·6, and the death-rate 14·7, per 1000 of the estimated population. The marriage-rate in the *second* quarter of 1906 was 16·2 per 1000.

The facts, in detail, concerning Scotland and Ireland, are recorded in the Quarterly Returns of the Registrars-General for those parts of the United Kingdom.

Passenger Movement.

According to Returns issued by the Board of Trade it appears that during the three months ended 30th September last, 170,675 passengers left the United Kingdom for places out of Europe. Persons of British origin numbered 100,919, of whom 68,162 were English, 15,978 were Scottish, and 16,779 were Irish. Persons of Foreign origin numbered 69,645, whilst the nationality of 111 others was not stated.

Compared with the numbers in the corresponding period of the previous year, the proportion of English passengers showed an increase of 32·5 per cent., that of Scottish an increase of 7·3 per cent., and that of Irish an increase of 2·2 per cent.

ENGLAND AND WALES.

This Return comprises the BIRTHS and DEATHS registered in the 2,035 registration sub-districts of England and Wales in the three months ended 30th September 1906; and the MARRIAGES in 15,608 churches or chapels, in 14,541 registered places of worship unconnected with the Established Church, and in 635 Superintendent Registrars' Offices, in the three months ended 30th June 1906.

Marriages.

In the *second* quarter of 1906 the marriages of 148,652 persons were registered, being equal to an annual rate of 17·3 persons married per 1000 of the estimated population; this had been the average rate in the corresponding quarters of the ten years 1896-1905 also.

Among registration counties with populations exceeding 100,000 persons the lowest marriage-rates were 12·3 in Suffolk, 12·5 in Carnarvonshire, 13·1 in Norfolk, 13·2 in Cambridgeshire, 13·5 in Cornwall, and 13·8 in Carmarthenshire; the highest rates were 18·7 in Lancashire, 19·5 in Durham, 19·6 in Warwickshire and in Nottinghamshire, and 20·8 in Lincolnshire.

Births.

The births registered in the *third* quarter of 1906 numbered 234,624, and were in the proportion of 26·9 annually per 1000 of the population; this is the lowest birth-rate recorded in any third quarter since civil registration was established. The mean rate in the ten preceding third quarters was 28·8. In registration counties with populations exceeding 100,000 persons the lowest birth-rates during the quarter were 20·8 in Sussex, 21·7 in Cornwall, 22·1 in Herefordshire, 22·2 in Devonshire, 22·5 in Somersetshire, and 22·6 in Oxfordshire and in Dorsetshire; the highest rates were 30·1 in Nottinghamshire, 30·3 in Staffordshire and in Northumberland, 30·7 in Carmarthenshire, 33·9 in Glamorganshire, 34·1 in Durham, and 34·8 in Monmouthshire.

In 76 great towns the birth-rate averaged 27·9 per 1000, ranging from 15·5 in Hastings, 17·4 in Bournemouth, 19·1 in Hornsey, 19·7 in Halifax, 21·3 in Bradford, and 21·4 in Northampton, to 35·2 in Hanley, 36·0 in Middlesbrough, 37·1 in Sunderland, 37·7 in Rhondda, and 37·9 in Merthyr Tydfil. In 142 smaller towns the mean birth-rate was 26·4 per 1000, and in the remainder of England and Wales, excluding the 218 chief towns, it was 26·0.

Natural Increase of Population.

The natural increase of population in England and Wales last quarter, by excess of births over deaths, was 105,241, against 124,855, 103,972, and 114,413 in the third quarters of 1903, 1904, and 1905 respectively.

Prices and Pauperism.

The average price of wheat per quarter, which had been 27s. 11d., 28s. 6d., and 29s. 10d. respectively in the preceding three quarters, was 28s. 5d. last quarter. The mean wholesale prices per lb. of British beef and mutton at the Metropolitan Cattle Market were:—of inferior beef,

4½*d.*; of prime beef, 6½*d.*; of inferior mutton, 6½*d.*; of prime mutton, 8½*d.* Compared with the average prices in the preceding three months, the mean price of inferior beef showed a decrease of ½*d.* while that of prime beef remained unchanged. The mean prices of inferior mutton and of prime mutton showed respectively an increase of ¼*d.* and of ⅓*d.* The average price in the London Market of sea-borne coal put in barge from the collier in the Thames was 15*s.* 4*d.* per ton, against 14*s.* 4*d.* per ton in the third quarter of 1904.* The mean price of Consols was 87*l.* 6*s.* 4*d.*, having been 89*l.* 11*s.* 2*d.* in the preceding quarter. The minimum annual rate per cent. of discount charged at the Bank of England, which had remained at 3*l.* 10*s.* since 21st June, 1906, was raised on 13th September to 4*l.* The mean rate during the quarter was 3*l.* 11*s.* 11*d.*

The average number of paupers relieved in England and Wales on the last day of each week in the quarter was 751,182, exclusive of lunatics in asylums, of casual paupers, and of persons receiving medical relief only; of these 236,139 received in-door, and 515,043 out-door, relief. The proportion of the population in receipt of poor-law relief was 21·7 per 1000, against 21·8 and 22·2 per 1000 respectively in the third quarters of 1904 and 1905.

Meteorology.

A detailed report prepared in the Meteorological Office, respecting the weather over the United Kingdom in the past quarter, with a table of Monthly Results for a number of stations in England and Wales, will be found on pp. 72-89.

Throughout nearly the whole quarter the weather was influenced by anti-cyclonic systems which extended over the country, in most cases, from the westward or southward. With such conditions there was, as usual, an abundance of bright sunshine and a remarkable absence of rain, with, however, very few long periods of absolute drought. In the early part of the quarter the weather, though fine, was distinctly cool for the time of year, shade temperatures as high as 80° being very rare. Later on the thermometer rose decidedly, and was almost constantly above its average level. The highest temperatures were registered unusually late in the season. At the close of August or the beginning of September the thermometer rose above 80° in Ireland, above 85° in Scotland, and above 90° over a considerable portion of England, some stations recording readings as high as 95°, or even a trifle above it. In the majority of places the readings at this time were the highest on record for so advanced a period in the summer, and at many northern stations they were the highest on record for any time during the year.

July opened with fine weather, but in the closing half of the first week the conditions became less settled, with thunderstorms in several parts of the eastern and central districts. After this temporary break the conditions improved, and, with the exception of a thundery spell about the 12th and 13th, remained fine until the middle of the month, when a period of showery weather set in. The passage of a deep cyclonic system along the northern coasts of Scotland between the 17th and 19th was accompanied by an unusually heavy fall of rain in the west and north-west of that country, and by considerable falls in some parts of the west and north of England, but over England as a whole the precipitation recorded at the time was of trifling weight. The remainder of July was mostly fine, but thunderstorms occurred locally over our midland and south-eastern counties on the 27th.

* No prices for sea-borne coal were quoted in the third quarter of 1905.

At the beginning of August, when a large shallow barometrical depression extended over the country from the westward, the weather fell into a very unsettled, thundery state, and at many places in the west and north the rainfall of the 1st and 2nd was exceedingly heavy, the Welsh districts being the most seriously affected. The thunderstorm which occurred on the evening or night of the 2nd was of a prolonged character, especially as regards the display of lightning, and was attended in the east midland counties by an exceptionally severe hailstorm which caused much damage to the crops. After these violent outbursts of meteorological energy the weather improved very decidedly in all the eastern, central, and southern districts, where it remained fair throughout nearly the remainder of the month. Thunderstorms were, however, experienced at times, and were accompanied on the 8th by heavy falls of rain in some parts of Norfolk and Lincolnshire. In the western and northern districts, the conditions were changeable and showery until nearly the close of the month, when fine weather became general, with the remarkable rise of temperature to which reference has already been made.

The hot dry spell noticed at the end of August continued during the first three days of September, after which the weather became cooler and less settled, with a heavy fall of rain in London and some other parts of our southern counties on the 4th. At the close of the first week an improvement took place, but in the middle portion of the month the conditions were rather changeable, thunderstorms being experienced on the 15th at several of the southern stations. During the remainder of September the weather was almost continuously fair and dry.

For the quarter as a whole the *mean temperature* was everywhere in excess of the average, the departure from the normal being greatest (nearly two and a half degrees) in the London district. In the south-west of England the actual value agreed very closely with the average. The highest readings were recorded either on August 31st or on September 1st or 2nd, when the thermometer rose to 90° and upwards in most districts and to 95° in the London district (at Barnet). In England south-west and the Channel region the absolute maxima were slightly below 90°. The lowest readings were observed as a rule between September 26th and 28th, when frost occurred at many inland stations. At Llangammarch Wells, in central Wales, the sheltered thermometer on September 26th fell nearly as low as 28°, while at Stokesay, in Shropshire, on September 26th and 28th it fell a trifle below that level.

The *rainfall* of the quarter amounted in London to only 3·5 ins., and was scarcely equal to 51 per cent. of the average. In many parts of the country the deficiency was still greater. In England east and England central the total amount did not exceed 44 per cent. of the average, and in the English Channel district it did not exceed 39 per cent., while in England south the proportion was as low as 38 per cent. The number of days with rain was also abnormally small. In London there were only 25 such occasions, as against an average of 40. The heaviest individual falls of the period were registered at various times in the different districts. On August 1st Pembroke recorded 1·9 in. and on the following day Asparia recorded 1·8 in.; on August 8th Wakefield had 0·9 in. and Hillington as much as 1·7 in., while on September 4th Norwood registered 1·0 in. and Ventnor 1·7 in. The largest daily amount in the English Channel district was 0·8 in. at Scilly on August 12th.

The duration of *bright sunshine* in London amounted to nearly 640 hours, or to 49 per cent. of the possible, the aggregate being 147 hours in excess of the average for the 25 years 1881-1905. A considerable excess was reported in most other parts of the country, the duration in England central, 618

hours, being 170 hours more than the average. In England south-west and in the English Channel (normally two of the sunniest parts of the country) the excess was smaller than in other districts. The sunniest week was that ending with September 1st, when more than 70 per cent. of the possible duration was recorded in all the eastern, central, and southern parts of the country, and as much as 74 per cent. of the possible in England east.

Deaths.

The deaths registered in England and Wales last quarter numbered 129,383, and were in the proportion of 14·9 annually per 1000 persons living, the average rate in the ten preceding third quarters having been 16·2. In registration counties with populations exceeding 100,000 persons, the death-rates ranged from 10·9 in Northamptonshire, 11·0 in Dorsetshire, 11·2 in Somersetshire, 11·4 in Berkshire, and 11·7 in Wiltshire, to 16·7 in Warwickshire and the North Riding of Yorkshire, 17·0 in the East Riding of Yorkshire, 17·1 in Northumberland, 17·4 in Lancashire, and 17·7 in Durham.

The 129,383 registered deaths included 67,586 of males and 61,797 of females, the death-rate among males being 16·1, and that among females 13·7, per 1000 of the estimated populations of the respective sexes. Compared with the average for each sex in the ten preceding third quarters the death-rate of males showed a decrease of 1·4, and that of females a decrease of 1·2, per 1000 living. Out of equal numbers living, the deaths of males were to those of females as 117 is to 100; this had also been the average proportion in the corresponding quarters of the ten years 1896–1905.

Urban and Rural Mortality.

In 76 great towns, in each of which the population at the census of 1901 exceeded 50,000, and of which the aggregate population in the middle of 1906 is estimated at more than fifteen and three-quarter millions of persons, the death-rate was 16·2 per 1000 living, or 1·3 above the death-rate of the whole country. The rates in the several towns ranged from 7·2 in Hornsey, 9·2 in Kings Norton, 10·2 in Handsworth (Staffs.), 11·3 in Willesden and in Bournemouth, 11·5 in Burton on Trent, and 11·8 in Leyton, to 20·3 in Tynemouth, 20·5 in Wigan, 20·6 in Middlesbrough, 20·7 in Burnley, 21·0 in Liverpool, 21·1 in Merthyr Tydfil, and 21·9 in Stockport.

In 142 smaller towns, with populations ranging between 20,000 and 50,000 at the census of 1901, and with an aggregate population estimated at more than four and three quarter millions, the death-rate was 14·4 per 1000 living, or 1·8 per 1000 below the rate in the great towns.

In the remainder of England and Wales, with an aggregate population estimated at more than thirteen and three-quarter millions, of whom about six and a quarter millions live in small towns, and more than seven and a half millions in rural districts, the death-rate was 13·5.

Mortality at Different Ages.

Of the 129,383 deaths registered last quarter, 41,306 were those of infants under one year of age, 53,838 those of persons aged between one year and sixty years, and 34,239 those of persons aged sixty years and upwards.

Infantile mortality, measured by the proportion of deaths under one year of age to registered births, was equal to 176 per 1000, the average in the ten preceding third quarters having been 187. Among registration counties with populations exceeding 100,000 persons, the lowest proportions per 1000 births

were 72 in Shropshire, 81 in Wiltshire and in Dorsetshire, 86 in Carmarthen-shire, 88 in Somersetshire, and 99 in Herefordshire. The highest proportions were 202 in Essex, 203 in Middlesex, 211 in Lancashire, 221 in the East Riding of Yorkshire, and 223 in Warwickshire.

In the 76 great towns infantile mortality averaged 209 per 1000 births, being 33 per 1000 above the proportion in England and Wales as a whole. Among the several towns the lowest proportions were 94 in Hornsey, 110 in Halifax, 135 in Derby, and 137 in Bournemouth and in Devonport; the highest were 267 in Great Yarmouth, 269 in Preston, 275 in Hull, 297 in Asten Manor, 301 in Stockport, 306 in Burnley, and 315 in Grimsby. Among the 142 smaller towns infantile mortality averaged 191 per 1000 births, ranging from 43 in Winchester, 59 in Llanelly, 66 in Chadderton, 75 in Todmorden, 77 in Bacup, 80 in Cheltenham, and 81 in Cannock, to 310 in Swinton & Pendlebury, 320 in Doncaster, 332 in Widnes, 341 in Batley, 347 in Loughborough, 361 in Southend on Sea, and 426 in Longton. Excluding these 218 towns, infantile mortality in the remainder of England and Wales was in the proportion of 131 per 1000 births.

The mortality in England and Wales among persons aged between one year and sixty years was at the annual rate of 6·9 per 1000 of the estimated population at this group of ages, being 0·7 below the mean rate in the ten preceding third quarters. In the 76 great towns the mean mortality at this age-group was 7·6 per 1000, ranging from 3·0 in Hornsey, 3·8 in Handsworth (Staffs.), 3·9 in Kings Norton, and 4·4 in Willesden and in Bournemouth, to 10·3 in Liverpool, in Bootle, and in Middlesbrough, 10·4 in Manchester, and 11·0 in Tynemouth. In the 142 smaller towns the mortality at this age-group averaged 6·2 per 1000.

Among persons aged sixty years and upwards the mortality was at the annual rate of 53·1 per 1000 of the estimated population at this group of ages; this had been the mean rate in the ten preceding third quarters also. In the 76 great towns the mean mortality at this age-group was 55·0 per 1000, the lowest rates being 30·5 in Kings Norton, 37·9 in Leyton, 42·7 in Hornsey, and 42·9 in Plymouth; and the highest, 70·1 in Bootle, 70·4 in Stockport, 71·7 in Smethwick, 73·7 in Rochdale, and 74·5 in Oldham. In the 142 smaller towns the rate averaged 55·1 per 1000.

Compared with the mean rates in the ten preceding third quarters, the mortality of infants under one year of age showed a decrease of 5·9 per cent., and that of persons between one year and sixty years of age a decrease of 9·2 per cent., while that of persons aged sixty years and upwards was equal to the average.

Mortality from certain Epidemic Diseases.

The 129,383 deaths from all causes include—

22,649	that were attributed to	diarrhœa,
1,639	"	" measles,
1,447	"	" whooping-cough,
1,176	"	" diphtheria,
770	"	" "fever,"
700	"	" scarlet fever,
5	"	" small-pox.

Thus, to the above-mentioned epidemic diseases in the aggregate, 28,386 deaths were referred last quarter, being in the proportion of 3·27 per 1000 of the estimated population, or 0·04 per 1000 above the average proportion in the corresponding quarters of the previous ten years.

Diarrhœa was the only one of the diseases in the foregoing list that showed a mortality above the average.

Diarrhœa was the assigned cause of 22,649 deaths last quarter, equal to an annual mortality of 2·60 per 1000, which is greater by 0·38 per 1000 than the decennial average rate for the third quarter of the year. In Radnorshire no deaths from diarrhœa were returned last quarter. Among counties with populations exceeding 100,000 persons the highest rates from this disease were 3·51 in Lancashire, 3·54 in Durham, 3·68 in the East Riding of Yorkshire, 3·96 in Essex, 3·98 in Middlesex, and 4·43 in Warwickshire. In the 76 great towns the average death-rate from diarrhœa was 3·63 per 1000; the rate was highest in the following towns:—Sheffield 5·67, Aston Manor 5·75, West Ham 6·12, Birkenhead 6·16, Grimsby 6·36, Hanley 6·47, and Coventry 6·51. In the 142 smaller towns diarrhœa was fatal on the average to 2·83 per 1000 of the population, and caused the highest mortality in Loughborough, Barking, Southend on Sea, Twickenham, Batley, and Longton. In the last-mentioned town the death-rate from diarrhœa was equal to 11·00 per 1000 annually. In the remainder of England and Wales the death-rate from diarrhœa averaged 1·38 per 1000. Among registration sub-districts outside the 218 chief towns diarrhœa was exceptionally fatal in Whitstable, Foleshill, Warsop, Litherland, Hemsworth Western, Darfield, Ormesby, Cornforth, Bishop Auckland, and Ashington. In accordance with precedent, special tables relating to summer mortality from diarrhœa have been inserted in the present Return (*see* Tables XI.–XIII.).

Measles was returned as the cause of death in 1,639 instances, corresponding to an annual rate of 0·19 per 1000 of the population, which is below the average rate in the third quarters of the preceding ten years by 0·08 per 1000. Ten of the counties of England and Wales were free from measles fatality throughout the quarter; the counties with populations of more than 100,000 persons showing the highest fatality from this disease were Northumberland, where the annual rate was equal to 0·27, the West Riding of Yorkshire 0·37, Norfolk 0·38, and Lancashire 0·42 per 1000 of the respective populations. In the 76 great towns measles caused an average mortality of 0·27 per 1000. In 22 of these towns no deaths from this disease were registered during the quarter. The highest death-rates were 1·11 in Salford, 1·17 in Stockport, 1·18 in Rotherham, 1·39 in Norwich, 1·48 in Burnley, and 1·86 in Huddersfield. In the 142 smaller towns, measles was fatal on the average to 0·16 annually per 1000 persons living, and among these towns showed exceptional fatality in Todmorden, Twickenham, Nelson, Chadderton, and Doncaster. In the remainder of England and Wales the average measles death-rate was 0·11 per 1000 of the population. Among registration sub-districts outside the 218 chief towns, measles was especially fatal in Bideford, Atherton, Barnoldswick, Knottingley, and Castleford.

Whooping-cough accounted, last quarter, for 1,417 deaths, and for a death-rate equal to 0·17 per 1000 annually, which is lower by 0·09 per 1000 than the average rate in the ten previous corresponding quarters. In five of the counties of England and Wales no deaths were registered from this disease; in counties with populations exceeding 100,000 persons, the death-rate rose to 0·27 in Staffordshire and in Durham, 0·28 in Glamorganshire and in Carnarvonshire, 0·32 in Cheshire, and 0·35 in the North Riding of Yorkshire. In the 76 great towns, whooping-cough caused an average death-rate of 0·18 per 1000 living. Ten of these towns were free from mortality from this disease throughout the quarter, but the death-rate therefrom was equal to 0·62 in Sunderland, 0·66 in Rotherham, 0·80 in Middlesbrough, 0·87 in Swansea, and 0·99 in Birkenhead. In the 142 smaller towns, the average death-rate from whooping-cough was 0·15 per 1000; the disease being especially fatal in Ebbw Vale, Wednesbury, Batley, Cannock, and Widnes. In the remainder of England and Wales, whooping-cough caused an average

mortality equal to 0·15 per 1000 annually. Among registration sub-districts outside the 218 chief towns, whooping-cough was exceptionally fatal in Melford, Wrenbury, and Bedlington.

Diphtheria (exclusive of *croup* unless stated to be *membranous*) was returned last quarter as the cause of 1,176 deaths, a number equal to an annual rate of 0·14 per 1000 living, which is below the average rate in the ten previous corresponding quarters by 0·06 per 1000. Four of the counties were entirely free from fatal diphtheria throughout the quarter. Among counties with populations exceeding 100,000 persons the highest death-rates from this disease were 0·25 in the East Riding of Yorkshire, 0·26 in Berkshire, 0·27 in Denbighshire, 0·28 in Bedfordshire, and 0·32 in Lincolnshire. The average death-rate from diphtheria in the 76 great towns was equal to 0·16 per 1000 of their aggregate population. In six of these towns no deaths from this disease occurred in the course of the quarter. The great towns in which diphtheria showed the highest fatality were the following:—Derby 0·36, Hull 0·38, Salford 0·48, Reading and Rochdale 0·51, per 1000 of the several populations. In the 142 smaller towns the mortality from this disease averaged 0·13 per 1000, the rate being highest in Bedford, Erith, Lincoln, and Fenton. In the remainder of England and Wales, diphtheria was fatal in the average proportion of 0·11 per 1000 living. Among registration sub-districts outside the 218 chief towns, diphtheria was especially fatal in Caistor, Winterton, Cleckheaton, Goole, and Llanelly (Brecknock).

“*Fever*” (including the three chief forms—*typhus*, *enteric fever*, and ‘*pyrexia*’ of uncertain origin) was the registered cause of 770 deaths last quarter, equal to an annual death-rate of 0·09 per 1000 of the population, or 0·06 per 1000 less than the average rate in the third quarters of the previous ten years. In six counties no deaths from fever were returned last quarter; among counties with populations exceeding 100,000 persons, the highest county fever death-rates were 0·15 in Nottinghamshire and in Durham, 0·17 in Essex, 0·20 in Monmouthshire, and 0·25 in the East Riding of Yorkshire. In the 76 great towns fever caused an average mortality equal to 0·09 per 1000 annually. In 8 of these great towns no deaths from fever occurred; the towns with the highest fever death-rates were Tynemouth 0·22, Grimsby 0·23, Bootle 0·24, Hull 0·28, West Ham 0·35, and Wigan 0·42. In the 142 smaller towns fever caused an average mortality equal to 0·09 per 1000 annually, the mortality being highest in Leigh, Morley, Oldbury, and Ince in Makerfield. In the remainder of England and Wales, the death-rate from fever averaged 0·09 per 1000. Among registration districts and sub-districts outside the 218 chief towns, fever was especially fatal in Runcorn, Beverley, Sedgefield, and Llangibby.

Scarlet fever accounted last quarter for the deaths of 700 persons, and for a death-rate of 0·08 per 1000 living, or 0·04 per 1000 less than the decennial average rate for the third quarter. Eight of the counties of England and Wales were free from scarlet fever mortality. Among counties with populations exceeding 100,000 persons, the highest rates were 0·12 in Cornwall and in Lancashire, 0·13 in Middlesex and in Oxfordshire, and 0·16 in the West Riding of Yorkshire. In the 76 great towns scarlet fever accounted for an average mortality equal to 0·10 per 1000 annually. No deaths from this disease were recorded in eighteen of these towns. The highest scarlet fever death-rates were 0·23 in Walthamstow and in Rochdale, 0·24 in Birkenhead, 0·33 in Rotherham, and 0·42 in Hanley and in Sheffield. In the 142 smaller towns scarlet fever was fatal in the average proportion of 0·07 per 1000 living, and caused the highest mortality in Stoke upon Trent, Guildford, Barnsley, Wakefield, and Macclesfield. In the remainder of England and Wales this disease caused an average death-rate equal to 0·06

per 1000 living. Among registration sub-districts outside the 218 chief towns, scarlet fever was especially fatal in Falmouth and Llansantffraid (Cardigan).

Small-pox was fatal to 5 persons last quarter, as compared with 4, 4, 3, and 1 in the four quarters immediately preceding.

Violent Deaths.

The deaths in England and Wales that were referred to different forms of violence, either accidental or otherwise, numbered 4,968 last quarter, and corresponded to an annual rate of 0·57 per 1000 of the population, against an average of 0·60 in the ten preceding third quarters. In registration counties with populations exceeding 100,000 persons, the lowest death-rates from violence were 0·11 in Herefordshire, 0·25 in Carnarvonshire, 0·31 in Bedfordshire, and 0·37 in Hampshire; the highest rates were 0·68 in Northumberland, 0·69 in Durham, 0·80 in Monmouthshire and in Glamorganshire, and 0·85 in Wiltshire. In the 76 great towns the mean rate was 0·54 per 1000 living; among the several towns the rate was only 0·15 in Reading, 0·18 in Hornsey, 0·19 in Handsworth (Staffs.), and 0·22 in Willesden; but it rose to 0·75 in Merthyr Tydfil, 0·77 in Liverpool, 0·79 in Coventry, 0·86 in South Shields, and 0·99 in Swansea.

Certification of Causes of Death.

Of the 129,383 deaths registered in England and Wales last quarter, the causes of 119,122, or 92·1 per cent., were certified by registered medical practitioners, and the causes of 8,529, or 6·6 per cent., by coroners after inquest; whilst the causes of the remaining 1,732, or 1·3 per cent., were not certified, the average proportion of uncertified deaths in the ten preceding third quarters having been 1·6 per cent. Among registration counties with populations exceeding 100,000 persons the proportion of uncertified deaths was less than 1 per cent. in London, Surrey, Sussex, Middlesex, Wiltshire, Cornwall, Gloucestershire, Cheshire, the East and North Ridings of Yorkshire, Monmouthshire, and Glamorganshire, but it reached 2·9 in Oxfordshire and in Shropshire, 3·0 in Derbyshire, 3·2 in Durham, and 4·5 in Herefordshire. In the 76 great towns the mean proportion of uncertified deaths was 0·8 per cent.; but whilst no uncertified deaths were registered in Croydon, Hornsey, Tottenham, West Ham, Walthamstow, Southampton, Great Yarmouth, Plymouth, Devonport, Wolverhampton, Walsall, Derby, Stockport, Oldham, or York, the proportion per cent. rose to 3·2 in St. Helens, 3·3 in Barrow in Furness, 3·4 in Preston, 3·7 in Rotherham and in South Shields, and 5·3 in Gateshead.

Inquests.

Inquests were held in England and Wales concerning 8,529, or 6·6 per cent. of the total deaths, the mean proportion in the ten preceding third quarters having been 6·3 per cent. In the 76 great towns the proportion of inquest cases was 6·8 per cent., ranging from 2·1 in Reading, 2·3 in St. Helens and in Preston, and 2·8 in Halifax, to 10·2 in Ipswich, 10·3 in Brighton, 10·7 in Swansea, and 11·7 in Southampton.

Deaths in Public Institutions.

The total deaths registered in England and Wales include 21,864, or 16·9 per cent., that occurred either in workhouses, in hospitals, or in lunatic asylums, the mean proportion of deaths in such institutions in the ten preceding third quarters having been 14·1 per cent. In the 76 great towns the deaths in public institutions averaged 21·8 per cent. of the

total deaths, the lowest percentages in the several towns being 1·7 in Rhondda, 4·7 in Smethwick, 5·5 in Handsworth (Staffs.), and 5·7 in Aston Manor; and the highest 23·0 in Derby, 23·2 in Brighton, 25·7 in Liverpool, and 37·3 in London.

LONDON.

The figures in Tables V. and VI. include the deaths of Londoners in the Metropolitan workhouses, hospitals, and lunatic asylums situated outside the County of London, but exclude the deaths of persons not belonging to London that occurred in the London Fever Hospital, in the Metropolitan Asylums Board Hospitals, and in the Middlesex County Lunatic Asylum, within the County of London. The death-rate, thus computed, was equal to 15·4 annually per 1000 living (Table VI.). If, however, all the deaths of non-Londoners that occurred in hospitals or other public institutions in London be excluded, the death-rate will not exceed 14·8 per 1000. Table X. shows the death-rate in London after this further correction has been applied; and, since the registered mortality in many London districts is seriously affected by the deaths in hospitals and other public institutions, the death-rates in the Metropolitan Boroughs are also shown, corrected by the distribution of all deaths in public institutions to the Boroughs to which the deceased persons had belonged.

EDINBURGH, GLASGOW, DUBLIN, AND BELFAST.

The annual birth and death-rates per 1000 living in these towns last quarter were as follows :—

—							Birth-rate.	Death-rate.
Edinburgh	22·5	13·1
Glasgow...	28·2	15·5
Dublin	30·9	21·4
Belfast	31·2	18·5

COLONIAL AND FOREIGN CITIES.

The Registrar-General has been favoured with returns of vital statistics by the authorities of 27 of the principal Colonial and Foreign Cities. From these a summary has been constructed for the past quarter (Table XIV.). Excluding the Indian cities, the highest and lowest annual birth and death-rates during the third quarter of 1906 were as follows :—

BIRTH-RATES.

—				Highest per 1000 living.	—				Lowest per 1000 living.
Trieste	34·5	Paris	18·2
Breslau	32·4	Brussels	18·1
Munich	29·4	Prague	20·7
Bucharest	28·3	Toronto	21·6
New York	28·3	St. Petersburg	22·6
Copenhagen	28·0	Antwerp	23·3
					London ...				26·5

DEATH-RATES.

—	Highest per 1000 living.	—	Lowest per 1000 living.
Moscow	28·2	Amsterdam	12·4
Trieste	25·2	Christiania	12·5
St. Petersburg	23·4	Stockholm	12·7
Breslau	22·3	Chicago	13·7
Bucharest	21·0	Rio de Janeiro	14·0
New York	18·6	Brussels	14·4
New Orleans	18·6	Antwerp	15·2
London ...		15·4	

Small-pox caused 15 deaths in Moscow, 9 in St. Petersburg, 4 in New Orleans, and 3 in Antwerp.

Measles was most fatal in proportion to population in St. Petersburg, Antwerp, Hamburg, Amsterdam, and Brussels; *scarlet fever* in St. Petersburg, Buda-Pesth, Moscow, and Chicago; *diphtheria* in St. Petersburg, Christiania, Moscow, and New York; *whooping-cough* in Philadelphia, Copenhagen, Moscow, Hamburg, and Breslau; "*fever*" in St. Petersburg, New Orleans, Philadelphia, Bucharest, Moscow, Trieste, and New York; and *diarrhæal diseases* in Moscow, Antwerp, Berlin, Breslau, New York, Trieste, and St. Petersburg.

Infantile Mortality.—Among those cities for which the figures are available, the proportion of deaths of children under one year of age to 1000 registered births ranged from 92 in Stockholm, 109 in Christiania, 125 in Amsterdam, and 139 in Paris, to 220 in Bucharest, 226 in Hamburg, 238 in Brussels, 274 in Berlin, 281 in Breslau, 296 in Antwerp, and 304 in Toronto.

INDIAN CITIES.—The death-rate was equal to 21·4 per 1000 in Calcutta, 46·3 in Bombay, and 51·8 in Madras. *Small-pox* caused 46 deaths in Calcutta, 27 in Madras, and 24 in Bombay; *measles* caused 72 deaths in Bombay, 27 in Madras, and 25 in Calcutta. Under the heading "*fever*" 1,646 deaths were classed in Bombay, 1,594 in Calcutta, and 1,533 in Madras, including respectively, 423, 118 and 1 from *plague*. The mortality from *diarrhæal diseases* was excessive in each of these Indian cities; *Asiatic cholera* caused 162 deaths in Calcutta, 801 in Bombay, and 422 in Madras.

RETURNS OF NOTIFIED CASES OF INFECTIOUS DISEASE.

At the request of the Local Government Board, and of the London County Council, and on their responsibility with respect to accuracy, tables have been inserted, in continuation of those published in previous returns, showing the numbers of cases of infectious sickness notified, under Act of Parliament, to the Sanitary Authorities of certain of the largest towns in England and Wales, during the third quarter of the year 1906 (see pages xxvii—xxxii).

TABLES.

TABLE I.—**Marriages, Births, and Deaths** registered in **England and Wales** in the Years **1896-1906**, and in each Quarter of those Years.

YEAR - - -	1896	1897	1898	1899	1900	1901	1902	1903	1904	1905	1906

Prices of Consols and the Rate of Discount are furnished by the Chief Cashier of the Bank of England published by the Board of Agriculture.

Prices of Wheat are furnished by the Board of Agriculture.

Prices of Coal are furnished by the Mineral Statistics Department of the Home Office.

Prices of Newcastle and Hartlepool coal only.

Prices of Liverpool coal only.

Prices of Scotland coal only.

TABLE V.—76 Great Towns.—Population: Births, Deaths, and Meteorology in the 13 Weeks ended 29th September, 1906.

NOTE.—The 76 Great Towns are those with populations exceeding 50,000 persons at the Census of 1901. They are arranged in the order of the Registration Districts in which they are situated; those towns included in the Outer Ring of the Metropolitan Police District being placed, for convenience, immediately after London. The Registrars alone must be considered responsible for the accuracy of the figures upon which these returns are based.

TOWNS	ESTIMATED POPULATION in the middle of 1906.	BIRTHS.	DEATHS.	The DEATHS registered include										MEAN TEMPERATURE (De- grees Fahr.).	RAIN- FALL. (Inches).	TOWNS

The Registration Districts, 635 in number, are collections of contiguous Parishes or Places, combined for purposes connected with the Registration of Births, Deaths, and Marriages, and are nearly always identical with the Poor Law Unions of the same names: they are here arranged topographically under the Registration Counties.

^a See page 2, note ^b.

^b For London, the births and deaths given for the quarter are derived from the Weekly Returns made by the Registrar-General.

II.—SOUTH EASTERN COUNTIES.—REGISTRATION DISTRICTS.

Registration Districts.	Area in Statute Acres.	Enumerated Population, 1901.	Marriages		Births	Deaths		The DEATHS in the Quarter are stated by the Registrars to include												
			Registered in Quarter ended 30 June 1906.	Registered in Quarter ended 30 Sept. 1906.		Average in Quarters ended 30 Sept. in the 3 Years 1903-05	Registered in Quarter ended 30 Sept. 1906.	Deaths of		Deaths from								Inquest Cases.	Deaths in Public Institutions.	Unrecorded Causes of Death.
								Infants under 1 Year of Age.	Persons aged 60 Years & upwards.	Small-pox.	Measles.	Scarlet Fever.	Diphtheria.	Whooping-cough.	Fever.	Diarrhoea.	Violence.

The Registration Sub-districts (2035 in number) are sub-divisions of the Registration Districts in which the Births and Deaths are registered by Registrars severally appointed for that purpose. The letter W denotes that the Sub-district is within its limits a Workhouse belonging to the District or Union; w indicates a Workhouse belonging wholly or partly to other Districts than that in which it stands; F a Hospital for Infectious Diseases; H another Hospital; L a Lunatic Asylum. When a sub-district contains more than one institution of either kind, the number is indicated by a figure prefixed to the letter.

See page 2, note b.

METEOROLOGY.

REMARKS ON THE WEATHER OVER THE UNITED KINGDOM DURING THE
QUARTER ENDED SEPTEMBER 30TH, 1906.

EXTRACTED FROM THE
MONTHLY WEATHER REPORTS
OF THE
METEOROLOGICAL OFFICE

BASED ON OBSERVATIONS AT 152 STATIONS,
TOGETHER WITH TABLES OF METEOROLOGICAL DATA AT 58 STATIONS
IN ENGLAND AND WALES, AND THE ENGLISH CHANNEL.

JULY, 1906.

General Summary.—The atmospheric conditions which prevailed over the British Isles during this month were, on the whole, of a quiet and seasonable character. Nearly all the disturbances which exerted any influence on our weather were situated out at sea beyond the western and northern coasts, and as a rule they were very shallow and resulted in no great force of wind. On the 19th, however, a more than usually deep cyclonic depression passed close to the Shetlands and occasioned fresh or strong Westerly gales at various places on our north-western and northern coasts. There was a great preponderance of fair to very fine, bright and dry weather, but, notwithstanding this, there was, in continuation of the same striking feature referred to in the report for the preceding month, a remarkable absence of very high shade temperatures. During the first three weeks there was a marked deficiency in the rainfall, while there was a considerable excess of bright sunshine, yet the mean air temperature of the period was distinctly below the normal in every district, the solar radiation temperatures at the same time being high, frequently exceeding 130° , in some instances exceeding 140° , Oundle touching 145° . The remainder of the month was considerably warmer. On various parts of the coasts, and especially the southern and western, there was a great deal of thick mist or fog, the latter at times exceedingly dense and interfering with navigation. Thunderstorms occurred in many localities on the 3rd, 6th, 11th, 12th, 27th, and 31st. That of the 27th over the Midland and South-Eastern counties brought heavy rains to several places. A very heavy rainstorm was experienced over the north-west of Scotland during the 17th and 18th, the two days' rain at Glencarron amounting to 4.4 ins., and at Fort William to 4.9 ins. For the month as a whole pressure was everywhere a little higher than usual; temperature was in defect over the greater part of the kingdom; the winds were mainly South-Westerly to Westerly and North-Westerly in direction, and as a rule of not much strength; rainfall was deficient in nearly all districts; and the duration of bright sunshine exceeded the normal at nearly all stations.

Pressure.—*Mean* at 8 a.m. ranged from 30.09 ins. at Jersey, and above 30 ins. over the southern half of the kingdom to below 29.9 ins. over the north of Scotland, 29.83 ins. at Sumburgh Head. The values were a little above the average at all stations, by only 0.01 in. in the north and north-west, and by 0.08 in. at Oxford and Scilly. The general distribution of pressure thus differed little from the normal. *Highest* readings occurred in the period from the 8th to the 11th, exceeding 30.3 ins. at most of the western stations, and reaching 30.41 ins. at Valencia. *Lowest* values were recorded on the 19th, when the barometer fell below 29.5 ins. all over Scotland, below 29.2 ins. at Stornoway and Wick, and to 28.88 ins. at Sumburgh Head. *Range* was very small over the south-east of England, only 0.4 in., increasing thence to more than an inch in the north of Scotland, and to 1.3 ins. in the Shetlands.

Depressions.—Several disturbances influenced our weather to some extent, but as a rule the systems were at some distance from our coasts and were possessed of little energy, except in the case of the very deep one whose central space passed close to the Shetlands on the 19th. The shallow disturbance which crossed the south-east of England between the 26th and 28th was associated with local thunderstorms.

Anticyclones.—The weather was frequently under the influence of areas of relatively high pressure, but the central spaces of these systems were nearly always outside these islands, to west, south, east, or north. Between the 8th and 11th, the mercury rose as high as 30·3 ins. to 30·4 ins. at some of the western and south-western stations, but there were few other occasions on which readings above 30·2 ins. were registered.

Winds.—The winds showed a very good agreement with the general pressure distribution, South-Westerly to Westerly prevailing, with a considerable proportion of North-Westerly breezes. Gale force was attained on 2 days at Deerness, Wick, Durham, and Malin Head.

Temperature.—*Mean at sea level* ranged from 64° along the Thames Valley, and above 62° over the inland and southern counties of England to below 56° over northern Scotland and 51° at Sumburgh Head. The general distribution was in fair accordance with the normal. The actual values were below the average at the great majority of stations, but in the eastern districts of England a considerable proportion of them showed an excess. At Llangammarch Wells the deficiency was nearly 3°, and at Portland Bill, Cardiff, Deerness, and Sumburgh Head about 2°. There was an excess of 1·7° at Whitby. *Highest* values occurred on very varied dates in Scotland, 78° at Nairn (2nd) and Dumfries (5th), 77° at Crathes (22nd); on the 22nd in Ireland, 78° at Kingstown and 77° at Dublin; and mainly at the close of the month in England, 84° at Epsom and Margate (18th), and Cromer and Wokingham (30th), several stations rising to between 80° and 83°. *Lowest* readings were recorded on various dates in all districts, 33° at Lairg (1st) and Garforth (12th), 34° at Balmoral (11th) and Llangammarch Wells (12th), and 35° at Marlborough and Wokingham (1st), and at Crathes (25th). *Range* was as much as 49° at Wokingham, 47° at Marlborough, and above 40° at a number of other stations, but did not exceed 19° at Portland Bill, Pembroke, and Sumburgh Head, and was only 15° at Scilly. *Vapour Pressure* ranged from 0·46 in. at Clacton and Dunmow (9 a.m.), to 0·33 in. at Sumburgh Head (8 a.m. and 6 p.m.) and Deerness (9 p.m.). *Relative Humidity* was as high as 93 per cent. at Pembroke (8 a.m.), and as low as 64 per cent. at Lincoln (9 a.m.). *Mean Earth Temperature* at 1 ft. depth ranged from 64° at Plymouth to 56° at Garforth; and at 4 ft. depth from 58° at Kew and Nottingham to 52° at Garforth.

Rainfall.—There was an excess of rain at several stations in the north and north-west of Scotland and in the south and west of Ireland, but generally the amounts were below the average. Glencarron had an excess of 3 ins., and Fort William of 2·9 ins., while in several localities the deficiency was more than 2 ins., as much as 2·8 ins. at Cardiff. The largest aggregates were 8·5 ins. at Glencarron, 8·1 ins. at Fort William, and 7·1 ins. at Laudale, but as a rule the amounts were less than an inch, under $\frac{1}{2}$ in. in various English districts, only 0·25 in. at Felixstowe, Lowestoft, and Reading. The days on which precipitation was measured ranged from 29 at Valencia to 4 at Maidenhead. Falls exceeding an inch in a day were unusually rare—on the 17th in the north of Scotland, up to 3 ins. at Glencarron and 3·3 ins. at Fort William; on the 30th 1·1 in. at Whitby; and on the 31st over an inch at Cockle Park and 1·7 in. at Alnwick Castle.

Bright Sunshine.—The duration of bright sunshine exceeded the average at nearly every station, by 81 hours at Tunbridge Wells, and by 59 hours at Westminster. The percentage of possible duration ranged from 57 at Felixstowe, Eastbourne, and Guernsey (Brooklyn) to 25 at Fort Augustus.

AUGUST, 1906.

General Summary.—The period was marked by weather of a very variable character. In the western and northern districts it was generally unsettled, owing to the proximity of a number of disturbances nearly all of which kept out on the Atlantic, travelling on some north-easterly course. Much finer conditions prevailed over the southern, eastern and central counties of England, yet although there were many reports of a serious shortage of water for domestic and other purposes in these districts, and vegetation presented a parched and burnt appearance, there was no period of actual drought in any part of the country, but the falls of rain in many places were, as a rule, too slight to penetrate the soil. About the middle of the month there was a little coolness noticeable, otherwise there was an almost persistent warmth, and quite at the close the heat increased to an unusual extent, so that at a number of stations shade temperatures as high as 90° to 95° were registered, a further increase taking place in the opening days of September. At several stations the maximum values during this hot spell were the highest yet recorded. Thick mists and fogs were again very frequent on our coasts, more especially in the west and south. A fairly deep cyclonic system travelled swiftly on an

east north-easterly course across Ireland and England early on the 25th, and over the western and southern portions of the kingdom North-Westerly to South-Westerly strong winds and gales were experienced, but the wind dropped quickly as the centre of disturbance passed to the North Sea. Thunderstorms occurred on numerous days, the majority being in various parts of England. In some cases the accompanying rainfall was very heavy, and hail was reported with a few. The thunderstorm of the evening of the 2nd was rather uncommon in its features. There was very little thunder, of a low rumbling type, but the lightning was remarkable for its brilliancy, being almost continuous, and illuminating the country round for a long time. In a few places the rainfall was very heavy. The barometer at Kew Observatory rose 0.10 in. in seven minutes, then fell 0.035 in. in thirteen minutes. An exceptionally destructive hailstorm swept the east Midland counties on this occasion, and much damage was done to crops in the counties of Bedford, Cambridge, and Huntingdon. For the month as a whole pressure differed but slightly from the normal; temperature was in excess; the winds were for the most part Southerly to Westerly in direction; rainfall was deficient over the greater portion of the kingdom; and bright sunshine was in excess at the majority of stations. According to newspaper reports, earthquake shocks were felt in north Donegal on the afternoon of the 22nd, and round Derby and Matlock Bath about 6 a.m. on the 27th. [These had been preceded by a great earthquake in the Valparaiso region.]

Pressure.—*Mean at 8 a.m.* ranged from 30.07 ins. at Jersey to 29.82 ins. at the more northern and north-western stations. The values were slightly below the average in the north-western and central parts of Ireland; elsewhere they were above, but only Oxford and Dungeness had an excess of 0.05 in., and Jersey nearly 0.07 in. *Highest* readings were attained on the 28th, when several English stations reported 30.4 ins. and upwards, Oxford 30.45 ins. *Lowest* values occurred on the 13th or 14th, 29.3 ins. to 29.4 ins. at western and northern stations. On the 3rd Blacksod Point had a reading of 29.39 ins., and on the 25th, Shields reported 29.40 ins. *Range* was small and fairly uniform, from 0.73 in. at Jersey to 1.00 in. at Blacksod Point and Shields.

Depressions.—On numerous days the weather was under the influence of disturbances whose centres were at some distance beyond the western and northern coasts. Of those that crossed the country the most important was the one of the 25th, which occasioned very boisterous conditions over a considerable area.

Anticyclones.—The central space of a high pressure system visited the Eastern half of the English Channel on the 6th, another moved eastward across England on the 28th. All the other anticyclones of the month had their centres well outside these islands.

Winds.—With so many disturbances on the Atlantic winds from between South and West were largely prevalent over Ireland and England, but in Scotland they were much more variable in direction, North-Easterly to Easterly in the Shetlands. There was only one day on which gale force was recorded at a few stations.

Temperature.—*Mean at sea level* ranged from above 65° at Jersey and at several stations in southern England to below 55° beyond the north of Scotland, 53° at Sumburgh Head. The general distribution was in fair agreement with the normal, but the actual values were in nearly every instance above the average, the excess amounting to between 3° and 4° at a number of stations. *Highest* readings occurred on the 31st nearly everywhere, in Ireland and Scotland 85° at Dublin (Phoenix Park) and Leith; in England several exceeded 90°, Bawtry and Colly Weston 94°, and Maidenhead 95°. *Lowest* values were recorded on various dates, but in numerous instance on the 30th. Lairg registered 32° (23rd), Wokingham 34° (29th), Balmoral 35° (19th), and Marlborough 37° (30th). *Range* was in consequence very large, exceeding 45° at many stations, as much as 55° at Maidenhead and 58° at Wokingham. At Crathes the extremes for the month occurred on the 31st, range 42°, and there were many cases of the extremes being between the 28th and 31st. *Vapour Pressure* varied between 0.50 in. at Plymouth (9 a.m.) and 0.34 in. at Sumburgh Head (8 a.m. and 6 p.m.). *Relative Humidity* ranged from 94 per cent. at Cronkbourne (9 p.m.) to 64 per cent. at Westminster (6 p.m.). *Mean Earth Temperature* at 1 ft. depth ranged from above 64° at Bath and Plymouth to 57° at Garforth; and at 4 ft. depth from 62° at Bath to 53.5° at Garforth.

Rainfall was in excess at several stations, mainly in the northern half of the kingdom, by more than 2 ins. at Clathick, Dumfries, and Pembroke, but generally it was below the average, the deficiency amounting to more than 2 ins. at Birmingham, Guernsey, Cirencester, and Roche's Point. The largest aggregates were 6.7 ins. at Dumfries, 6.5 ins. at Glencarron, 6.2 ins. at Clathick, and 6.0 ins. at Pembroke, the smallest 0.3 in. at Shoeburyness, Portland Bill, and Felixstowe, and 0.2 in. at Southend. Falls exceeding an inch in a day occurred on the 1st at Pembroke (1.9 in.) and Bettws-y-Coed (1.8 in.); on the 2nd at Aspatria (1.8 in.), Dumfries (1.7 in.), Llandudno (1.4 in.), Fort William (1.3 in.), and Holyhead (1.1 in.); on the 8th at Hillington (1.7 in.), Rauceby (1.4 in.), and Yarmouth (1.3 in.); and on the 12th at Towyn (1.5 in.). Precipitation was measured on 28 days at Fort William, but only on 3 days at Southend.

Bright Sunshine.—The duration of bright sunshine was less than usual at several northern stations and at a few on the south-west coasts, the loss at Edinburgh amounting to 26 hours. Generally the records were above the average, Oxford returning an excess of 66 hours, and Rothamsted 62 hours. The percentage of possible duration ranged from 60 at Bognor and Clacton-on-Sea to 19 at Fort Augustus.

SEPTEMBER 1906.

General Summary.—The most striking feature of the season was the great accession of warmth which occurred at the close of August, when the thermometer, which had previously been maintained at a very moderate level, suddenly rose in many localities well above 80° on the 30th, and above 90° on the 31st. During the first three days of September there were numerous instances of maximum values from 90° to 96° at various stations in England, as high as 89° in Scotland, as far north as Strathpeffer, and 84° in Ireland. In the sun's rays the heat was intense, there being many solar radiation temperatures of 130° and upwards, 148° at Epsom on September 2nd, and 152° at the Royal Observatory, Greenwich, on August 31st and September 2nd. As suddenly as it appeared this unusual heat at such a late period of the year passed away, and on the 4th there were very few maxima up to 75°, the majority being below 70°. The hot spell, therefore, was limited to only five days. Subsequently, nearly every station in the Kingdom had one or more instances of maxima below 60°, so that the range in the afternoon temperatures was very large: 30° and upwards at half the stations, exceeding 40° at York, or about equal to the extreme day and night range in an ordinary September. It is not a little remarkable that the abrupt change from the very hot to much cooler conditions was not accompanied by a thunderstorm in any part of the country, the only storms reported during the month being on the 15th or 16th, at Clacton-on-Sea, Dungeness, Eastbourne, Swarraton, and Scilly, reports of thunder or lightning alone being also rare. Although there were a few heavy falls of rain in the course of the month, the first half was, speaking generally, moderately dry, and the remainder very dry, in several localities the last 15 days were rainless. Coastal fog was rather frequent, and during the closing week thick mist or fog was reported every morning, more especially over the inland counties of England, where it was at times dense and wet. For nearly the whole month the days were more or less sunny. Auroral displays were witnessed in the north of Scotland on the 16th, and in many parts of Scotland and the north of England on the 22nd. For the month as a whole pressure, temperature, and bright sunshine were in excess of the normal; the wind showed a complete anticyclonic circulation; and precipitation was deficient.

Pressure.—*Mean at 8 a.m.* ranged from 30·23 ins. at Bath and Oxford to below 30·1 ins. in the extreme north of Scotland, 30·06 ins. at Sumburgh Head. The highest mean pressure occurred over the Midland Counties. The gradient was very slight. At all stations the values were decidedly above the average, the excess amounting to 0·19 in. at Dungeness and Portland Bill, and exceeding 0·27 in. at Aberdeen and Donaghadee. *Highest* readings were observed on the 18th (30·50 ins. at Aberdeen and Sumburgh Head), on the 23rd (30·61 ins. at Aberdeen), and on the 27th (above 30·6 ins. in many parts of England, 30·66 ins. at Oxford). *Lowest* values were recorded on the 6th (29·16 ins. at Sumburgh Head), and on the 15th (29·3 ins. and less at several northern and north-western stations, 29·22 ins. at Stornoway). *Range* was moderate, from 0·8 in. at Jersey to 1·4 in. at Sumburgh Head.

Depressions.—Several Atlantic low-pressure systems skirted our western and northern coasts, following a north-easterly course, and two areas originating over the Holstein region moved south-westward across the Low Countries, but only one very shallow depression traversed any portion of these islands, crossing south-eastern England on the 3rd.

Anticyclones.—There were only two days in the month on which the barometer was below 30 ins. all over the Kingdom, but in the first half of the period the centres of the high pressure areas were, with the exception of that of the 10th, on the Continent or outside our western and south-western coasts. During the second half the country may be said to have been continuously under high pressure conditions, one or more districts being within the central space of the anticyclone every day after the 20th.

Winds.—Following closely the mean disposition of atmospheric pressure, the wind results show a circulation round the region of highest pressure—from East on the English Channel, to between South and West on the western coasts, and North-Westerly to Northerly and North-Easterly along the east of Britain. Gale force was attained on 4 days at Malin Head and on 2 days at Cockle Park and Blacksod Point.

Temperature.—*Mean at sea level* ranged from 62° at Jersey and 60° and upwards at some other southern stations, to below 56° in nearly all parts of Scotland, in the Isle of Man, and in the inland parts of Ireland and Wales, below 52° in the Shetlands. The general distribution was in fair agreement with the normal, but the actual values were in almost every instance

above the average, by more than 3° at a few stations, 4° at Scarborough, and 5° at Lairg. *Highest* readings were registered in the first three days, 96° at Bawtry, 95° at Colly Weston, Epsom, and Maidenhead; 89° at Dumfries, Lairg, and Strathpeffer; and 84° at Clongowes Wood and Malin Head. *Lowest* readings occurred in the last week, 26° at Garforth, 27° at Crathes, and 28° at Llangammarch Wells, Marlborough, and Wokingham. *Range* was exceptionally large, 50° degrees and upwards at half the stations, as much as 63° at Maidenhead and Nottingham, 64° at Garforth, and 65° at Bawtry and Wokingham, while at Spurn Head and Portland Bill it was 22° and at Scilly only 16° . *Vapour Pressure* ranged from 0.325 in. at Wick (8 a.m.) to 0.45 in. at Portland Bill (6 p.m.) *Relative Humidity* ranged from 67 per cent. at Jersey (6 p.m.) to 92 per cent. at Garforth (9 p.m.). *Mean Earth Temperature* at 1 ft. depth ranged from 54° at Bettws-y-Coed to 61° at Bath and Plymouth; and at 4 ft. depth from 56° at Garforth to 62° at Bath.

Rainfall.—At every station the precipitation was below the average, the deficiency ranging upwards to 3 ins. at Cally, 3.1 ins. at Glencarron, and 3.2 ins. at Stornoway. The largest aggregates for the month were 6.3 ins. at Laudale, 5.5 ins. at Fort William, and 5.3 ins. at Glencarron; the smallest, 0.4 in. at Kingstown, Seaham, and Shields. The only falls of an inch or more in a day were 1.7 in. at Ventnor on the 4th, and 1 in. at Fort Augustus, 1.4 in. at Laudale, 1.9 in. at Fort William, and 2 ins. at Glencarron on the 5th. Two-thirds of the stations had less than 10 days with rain, Ampleforth only three days, the largest number being 16 days at Sumburgh Head.

Bright Sunshine.—The duration of bright sunshine was everywhere above the average, by more than 60 hours at one-third of the stations, by nearly 88 hours at Llandudno. The smallest total was 127 hours, or 34 per cent. of the possible duration, at Newcastle on Tyne; the largest, 238 hours, or 64 per cent., at Guernsey (Villa Carey). Over the greater part of the country more than 50 per cent. of the possible amount was recorded.

TABLES OF METEOROLOGICAL DATA FOR ENGLAND AND WALES AND THE ISLANDS IN THE ENGLISH CHANNEL.

*Prepared in the Meteorological Office under the direction of
W. N. Shaw, Sc.D., F.R.S.*

In compiling the following Tables (pp. 80 to 89) the stations have been grouped into eight Districts, namely, 1. London; 2. England, Central; 3. England, South; 4. England, East; 5. England, North-East; 6. England, North-West with North Wales; 7. England, South-West with South Wales; 8. The Islands in the English Channel. Each of these Districts is represented by a number of stations ranging from 3 to 12.

In making a selection from the whole number of stations available, endeavour has been made to represent as far as possible the various meteorological conditions of the several districts. Regard has been had not only to uniformity of geographical distribution, but also to the situation of the stations with regard to the sea coast, their height above sea level, and to their special characteristics as representing urban, suburban, or rural meteorological conditions.

Observations of earth temperature and of wind-force are included in the Tables. The wind observations at Falmouth and Kew are based on the records of a standard Robinson anemometer (factor 2·2). Velocities of between 13 and 38 miles in the hour have been entered in the Tables as strong winds, velocities of 39 miles in the hour, or above, as gales. At the remaining stations the wind-force observations are personal estimates in accordance with Beaufort's scale, and are specially liable to be affected by local circumstances. No previous comparison of corresponding data is available for the purpose of checking the results.

The stations selected, with the names of the Observers, are shown below.

LIST OF STATIONS AND OBSERVERS.

DAYS OF "CLEAR SKY" AND "OVERCAST."

A day is reckoned as a day of "clear sky" if the average of the estimates of the fraction of sky covered by cloud at the two hours of observation is less than .2, and as an "overcast" day if the average is greater than .8. At the Royal Observatory, Greenwich, records are kept of days persistently cloudless and days persistently overcast from midnight to midnight. The numbers of such days for the current quarter are.—Clear sky, 0, 2, 2; and Overcast, 0, 0, 0.

Oxford:—The observing hours at Oxford (the Radcliffe Observatory) are 8 a.m., noon and 8 p.m. The results given under Barometer and Hygrometer are the means of the observations at these hours reduced to the means for 9 a.m. and 9 p.m. by corrections deduced from a discussion of the Photographic Continuous Records. (See *Radcliffe Observations*, Vols. XXXIX. to XLV.) The averages used at Oxford are based on observations as follows: Rain, 86 years, 1815–1900; Temperature, 73 years, 1828–1900; Sunshine, 20 years, 1881–1900.

At Greenwich and Oxford the daily rainfall amounts are those for the 24 hours comprising the civil day. At other stations the amounts are those for the 24 hours ending at the time of morning observation; they are entered to the day preceding that of observation.

* At Oxford the observations are taken at 8 a.m., noon, and 8 p.m., see Note on page 79. At all the other stations of observation are 9 a.m. and 3 p.m. local time, with the following exceptions. At the stations marked: -

For all the stations marked a, b, and c, the results under Barometer, Hygrometer and Cloud are based on the for districts. For the station marked c, the results for Wind Direction and Number of Observations of Mod stations. They, as well as the number of days of "Clear Sky" and "Overcast" at this station, are printed in

† The averages used are obtained from observations extending over 35 years, namely:—For Rainfall, 35 years, † At Belvoir Castle the earth temperature is taken at 3 feet below the surface.

§ See Footnote p. 79.

INDEX OF URBAN DISTRICTS

As constituted on 30th September 1906, together with a reference to the number of the Registration District and Sub-district in which each is situated. See pages 6-69 of this Return.

Urban Districts which are County Boroughs or Municipal Boroughs are indicated by the letters C or M.B. Those Urban Districts marked * have been created, and the boundaries of those marked have been altered since the Census of 1901.

NOTE.—The exact constitution of each Urban District and of each Registration Sub-district is shown in Tables 9 and 12 respectively of the Census County Volumes. Of the 1,166 Urban Districts (including County, Municipal, and Metropolitan Boroughs) 149 were each co-extensive, at the end of September 1906, with one or more Registration Areas.

No. 232.] **Marriages**—*July, August, September, 1906.*
Births and Deaths—*October, November, December, 1906.* [Price 9d.]

*General Register Office, Somerset House,
26th January, 1907.*

UNITED KINGDOM.

The POPULATION of the UNITED KINGDOM in the middle of 1906 is estimated at 43,659,121 persons; that of England and Wales at 34,547,016, that of Scotland at 4,726,070, and that of Ireland at 4,386,035.

In the United Kingdom 281,526 *births* and 172,980 *deaths* were registered in the three months ended 31st December 1906. The natural increase of population was, therefore, 108,546. The number of *persons married* in the quarter ended 30th September 1906 was 179,146.

The birth-rate in the United Kingdom in the *fourth* quarter of 1906 was 25·6, and the death-rate 15·7, per 1000 of the estimated population. The marriage-rate in the *third* quarter of 1906 was 16·3 per 1000.

The facts, in detail, concerning Scotland and Ireland, are recorded in the Quarterly Returns of the Registrars-General for those parts of the United Kingdom.

Passenger Movement.

According to Returns issued by the Board of Trade it appears that during the three months ended 31st December last, 111,639 passengers left the United Kingdom for places out of Europe. Persons of British origin numbered 61,759, of whom 43,798 were English, 9,143 were Scottish, and 8,818 were Irish. Persons of Foreign origin numbered 49,880.

Compared with the numbers in the corresponding period of the previous year, the proportion of English passengers showed an increase of 26·3 per cent., that of Scottish an increase of 31·9 per cent., and that of Irish an increase of 9·6 per cent.

ENGLAND AND WALES.

This Return comprises the BIRTHS and DEATHS registered in the 2,039 registration sub-districts of England and Wales in the three months ended 31st December 1906; and the MARRIAGES in 15,616 churches or chapels, in 14,609 registered places of worship unconnected with the Established Church, and in 635 Superintendent Registrars' Offices, in the three months ended 30th September 1906.

Marriages.

In the *third* quarter of 1906 the marriages of 151,764 persons were registered, being equal to an annual rate of 17·4 persons married per 1000 of the estimated population, against an average rate of 17·1 per 1000 in the third quarters of the ten years 1896–1905.

Among registration counties with populations exceeding 100,000 persons the lowest marriage-rates were 12·5 in Dorsetshire, 13·2 in Norfolk, 13·3 in Suffolk, 13·4 in Shropshire and in Denbighshire, 13·5 in Herefordshire and in Carnarvonshire; the highest rates were 18·3 in Middlesex, 18·6 in Warwickshire, 19·5 in Monmouthshire, 20·0 in Lancashire, and 20·6 in London.

Births.

The births registered in the *fourth* quarter of 1906 numbered 225,124, and were in the proportion of 25·9 annually per 1000 of the population; this rate was 0·4 per 1000 above the rate recorded in the corresponding quarter of the year 1905, but with this exception it was the lowest birth-rate recorded in any fourth quarter since civil registration was established. The mean rate in the ten preceding fourth quarters was 27·8. In registration counties with populations exceeding 100,000 persons the lowest birth-rates during the quarter were 19·5 in Sussex, 20·1 in Herefordshire, 20·7 in Cornwall, and 21·1 in Northamptonshire, in Somersetshire, and in Carnarvonshire; the highest rates were 29·1 in Staffordshire and in Carmarthenshire, 30·0 in Northumberland, 31·8 in Glamorganshire, 33·0 in Durham, and 33·4 in Monmouthshire.

In 76 great towns the birth-rate averaged 25·5 per 1000, ranging from 15·7 in Hastings, 16·9 in Bournemouth, 18·0 in Halifax, 18·4 in Hornsey, 18·8 in Bradford, 20·5 in Burton on Trent, and 20·6 in Northampton, to 33·1 in Middlesbrough, 33·2 in Bootle, 33·8 in Merthyr Tydfil, 34·1 in St. Helens, 34·6 in Rhondda, and 35·0 in Tynemouth. In 142 smaller towns the mean birth-rate was 25·6 per 1000, and in the remainder of England and Wales, excluding the 218 chief towns, it was 25·2.

Natural Increase of Population.

The natural increase of population in England and Wales last quarter by excess of births over deaths, was 89,679, against 94,180, 90,078, and 91,639 in the fourth quarters of 1903, 1904, and 1905 respectively.

Prices and Pauperism.

The average price of wheat per quarter, which had been 28s. 6d., 29s. 10d., and 28s. 5d. respectively in the preceding three quarters, was 26s. 3d. last quarter. The mean wholesale prices per lb. of British beef and mutton at the Metropolitan Cattle Market were:—of inferior beef, 4d.; of prime beef, 7 $\frac{3}{4}$ d.; of inferior mutton, 7 $\frac{1}{2}$ d.; of prime mutton, 9 $\frac{3}{4}$ d. Compared with the average prices in the preceding three months, the mean price of inferior beef showed a decrease of $\frac{1}{8}$ d. while that of prime beef showed an increase of $\frac{1}{8}$ d. The mean prices of inferior mutton and of prime mutton showed respectively an increase of $\frac{3}{8}$ d. and of $\frac{1}{8}$ d. The average price in the London Market of sea-borne coal put in barge from the collier in the Thames was 16s. 8d. per ton, against 14s. 9d. per ton in the fourth quarter of 1904.* The mean price of Consols was 86l. 5s. 9d., having been 87l. 6s. 4d. in the preceding quarter. The minimum annual rate per cent. of discount charged at the Bank of England, which had been raised on 13th September, 1906, from 3l. to 4l., was raised again on 11th October to 5l., and further raised on 19th October to 6l. The mean rate during the quarter was 5l. 13s. 11d.

The average number of paupers relieved in England and Wales on the last day of each week in the quarter was 779,617, exclusive of lunatics in asylums, of casual paupers, and of persons receiving medical relief only; of these 255,324 received in-door, and 524,293 out-door, relief. The proportion of the population in receipt of poor-law relief was 22·6 per 1000, against 23·2 per 1000 in the fourth quarters, both of 1904 and of 1905.

Meteorology.

A detailed report on the weather over the United Kingdom in the past quarter, with a table of Monthly Results for a number of stations in England and Wales, prepared in the Meteorological Office, will be found on pp. 72-89.

The weather of the quarter was, upon the whole, mild and very changeable, with an excess of rain in most districts. The prevailing winds were, as usual, from between south and west, but their strength was seldom very great, the chief exceptions occurring at the beginning and end of December. At the former time the westerly wind blew a severe gale on some parts of our west and south coasts, while in the closing week of the quarter an equally severe gale from the northward prevailed in the northern parts of Ireland and Scotland. In the latter period a keen frost was experienced in nearly all parts of the kingdom, and considerable falls of snow occurred, especially in the northern districts, where heavy drifts were produced by the strong northerly winds prevailing at the time.

The early part of October was exceedingly mild, with a large excess of rain in most districts, the heaviest falls occurring on the 1st and 2nd, the 4th, and the 11th. After the middle of the month the weather became temporarily colder, and on the 17th or 18th an easterly wind in the northern districts was accompanied by an exceedingly heavy fall of rain, the latter phenomenon being reproduced later in the eastern and central parts of Scotland. After this the wind again became southerly or south-westerly, and temperature rose to a high level, heavy rain falling at many western stations on the 27th, in the north of England on the 28th, and in the western and northern districts generally on the 30th.

November opened with a continuance of mild, wet weather, the largest amounts of rain occurring over the central and southern districts on the 4th

* No prices for sea-borne coal were quoted in the fourth quarter of 1905.

and again on the 8th or 9th. It is worthy of note that in each case the heavy precipitation occurred with winds from the eastward or north-eastward. After a temporary improvement about the middle of the month the weather again became very changeable, and in some northern localities snow or sleet was experienced between the 18th and 20th. Subsequently a change to very mild weather set in, and between the 21st and 24th the thermometer rose to an unusually high level for the season. Towards the end of the month the weather became somewhat cooler, but was still mild for the time of year.

The early part of December was also very open, with strong winds or gales from the westward in most districts, but with no great excess of rain. At the close of the first week the wind shifted to the north-westward, with a change to colder weather, and with snow or sleet in many places, the latter being heavy on the 9th and 10th in some parts of Norfolk and Suffolk. After the middle of the month a spell of fair, dry weather was experienced, with a temperature differing but little from the normal. About Christmas time the wind, however, got into north-west and north, and for the next few days a spell of exceedingly rough, wintry weather was experienced, with sharp frosts and heavy falls of snow in most parts of the country. Quite at the close of the month a mild air began to spread in from the south-westward, and a brisk thaw occurred in all our western and southern districts.

For the quarter as a whole the *mean temperature* was above the average, the excess being, however, slight in the western and English Channel districts. The highest readings appear to have been recorded in most districts on October 1st or 2nd, but in England east, north-east, and north-west on October 10th or 11th. In all but the western and south-western parts of the country the thermometer at one or other of those times rose to between 70° and 72° . The lowest temperatures occurred at various times between December 26th and 30th, when hard frost was experienced very generally. Over a large portion of England the sheltered thermometer fell below 20° , the lowest readings recorded at stations the returns from which are used for the compilation of this report being 8° at Carlisle and 13° at Buxton, Belvoir Castle, and Llangammarch Wells. At Folkestone the thermometer fell to 12° , while at Swarraton, in Hampshire, it is reported to have fallen to 4° .

The *rainfall* of the quarter amounted in London to 9.3 ins., and was 32 per cent. more than the average. An excess was reported in most other parts of the country, but in this case, as in regard to temperature, the excess in the south-western parts of the country was small; in the English Channel district there was even a slight deficiency. Compared with the average, the wettest district appears to have been England east, where the total of 9.8 ins. exceeded the average by as much as 46 per cent. The heaviest individual falls occurred at various times in the different districts, the dates chiefly affected being October 2nd, 17th, and 18th, and November 4th and 8th. Snow or sleet showers were experienced rather commonly about the middle of November, and heavy snow fell in nearly all parts of the country in the last week of December.

The duration of *bright sunshine* in London amounted to rather more than 171 hours, or to 21 per cent. of the possible, the aggregate being 30 hours in excess of the average for the 25 years 1881-1905. A slight excess was reported also over the south of England as a whole, but in other districts there was a deficiency, the departure from the normal being, however, exceedingly small in England south-west. There were, during the quarter, very few weeks in which a deficiency of sunshine was reported over the entire kingdom.

Deaths.

The deaths registered in England and Wales last quarter numbered 135,445, and were in the proportion of 15·6 annually per 1000 persons living; this rate was 0·8 per 1000 above the rate recorded in the corresponding quarter of the year 1905, but was 1·1 per 1000 below the average rate in the ten preceding fourth quarters. In registration counties with populations exceeding 100,000 persons, the death-rates ranged from 11·9 in Northamptonshire, 12·4 in Middlesex, 12·7 in Berkshire, 12·8 in Worcestershire, and 12·9 in Sussex, to 16·9 in Glamorganshire, 17·5 in the North Riding of Yorkshire, 17·7 in Northumberland, 18·2 in Monmouthshire, 18·5 in Lancashire, and 18·6 in Durham.

The 135,445 registered deaths included 69,002 of males and 66,443 of females, the death-rate among males being 16·4, and that among females 14·8, per 1000 of the estimated populations of the respective sexes. Compared with the average for each sex in the ten preceding fourth quarters the death-rate of males showed a decrease of 1·3, and that of females a decrease of 1·0, per 1000 living. Out of equal numbers living, the deaths of males were to those of females as 111 is to 100; the mean proportion in the fourth quarters of the ten preceding years having been 112 to 100.

Urban and Rural Mortality.

In 76 great towns, in each of which the population at the census of 1901 exceeded 50,000, and of which the aggregate population in the middle of 1906 is estimated at more than fifteen and three-quarter millions of persons, the death-rate was 16·2 per 1000 living, or 0·6 above the death-rate of the whole country. The rates in the several towns ranged from 7·3 in Hornsey, 8·5 in Kings Norton, 10·2 in Northampton, 10·9 in East Ham, and 11·0 in Willesden, to 20·5 in Burnley, 21·0 in Rochdale, 21·2 in Middlesbrough, 21·8 in South Shields, and 22·1 in Oldham.

In 142 smaller towns, with populations ranging between 20,000 and 50,000 at the census of 1901, and with an aggregate population estimated at more than four and three quarter millions, the death-rate was 14·7 per 1000 living, or 1·5 per 1000 below the rate in the great towns.

In the remainder of England and Wales, with an aggregate population estimated at more than thirteen and three-quarter millions, of whom about six and a quarter millions live in small towns, and more than seven and a half millions in rural districts, the death-rate was 15·1.

Mortality at Different Ages.

Of the 135,445 deaths registered last quarter, 28,466 were those of infants under one year of age, 61,164 those of persons aged between one year and sixty years, and 45,815 those of persons aged sixty years and upwards.

Infantile mortality, measured by the proportion of deaths under one year of age to registered births, was equal to 126 per 1000, the average in the ten preceding fourth quarters having been 144. Among registration counties with populations exceeding 100,000 persons, the lowest proportions per 1000 births were 74 in Herefordshire, 78 in Berkshire and in Somersetshire, 80 in Buckinghamshire, 83 in Surrey, and 85 in Oxfordshire and in Wiltshire. The highest proportions were 147 in Northumberland, 148 in Monmouthshire, 149 in Carnarvonshire, 152 in Glamorganshire, 159 in Lancashire, and 165 in Durham.

In the 76 great towns infantile mortality averaged 138 per 1000 births being 12 per 1000 above the proportion in England and Wales as a whole. Among the several towns the lowest proportions were 66 in Reading, 70 in Hornsey, 79 in Kings Norton, 86 in Southampton, 87 in Hastings, and 89 in Northampton; the highest were 177 in South Shields and in Merthyr Tydfil, 178 in Middlesbrough, 181 in Gateshead, 184 in Newport (Mon.), 226 in Burnley, and 237 in Preston. Among the 142 smaller towns infantile mortality averaged 131 per 1000 births, ranging from 40 in Erith and in Winchester, 42 in Guildford, 44 in Ramsgate, and 49 in Watford, to 224 in Jarrow, 226 in Heywood, 227 in Farnworth, 231 in Ilkeston, 245 in Longton, 247 in Swinton & Pendlebury, 257 in Burslem, 281 in Tunstall, and 290 in Bacup. Excluding these 218 towns, infantile mortality in the remainder of England and Wales was in the proportion of 112 per 1000 births.

The mortality in England and Wales among persons aged between one year and sixty years was at the annual rate of 7·8 per 1000 of the estimated population at this group of ages, being 0·7 below the mean rate in the ten preceding fourth quarters. In the 76 great towns the mean mortality at this age-group was 8·6 per 1000, ranging from 3·0 in Hornsey, 3·9 in Kings Norton, 4·7 in Northampton and in Handsworth (Staffs.), and 4·8 in Willesden, to 12·4 in Rotherham and in Middlesbrough, 13·2 in Oldham, and 13·4 in South Shields. In the 142 smaller towns the mortality at this age-group averaged 7·2 per 1000.

Among persons aged sixty years and upwards the mortality was at the annual rate of 71·1 per 1000 of the estimated population at this group of ages; the mean rate in the ten preceding fourth quarters having been 67·9. In the 76 great towns the mean mortality at this age-group was 75·6 per 1000, the lowest rates being 47·9 in Hastings, 50·2 in Kings Norton, 50·4 in Leyton, 53·7 in Devonport, and 54·0 in Hornsey; and the highest, 99·8 in Newport (Mon.), 102·8 in Wigan, 104·4 in Rochdale, and 117·5 in Burnley. In the 142 smaller towns the rate averaged 71·2 per 1000.

Compared with the mean rates in the ten preceding fourth quarters, the mortality of infants under one year of age showed a decrease of 12·5 per cent., and that of persons between one year and sixty years of age a decrease of 8·2 per cent., while that of persons aged sixty years and upwards showed an increase of 4·7 per cent.

Mortality from certain Epidemic Diseases.

The 135,445 deaths from all causes include—

5,108	that were attributed to diarrhœa,
2,471	" " measles,
1,986	" " diphtheria,
1,326	" " "fever,"
1,233	" " whooping-cough,
897	" " scarlet fever,
12	" " small-pox.

Thus, to the above-mentioned epidemic diseases in the aggregate, 13,033 deaths were referred last quarter, being in the proportion of 1·49 per 1000 of the estimated population, or 0·09 per 1000 below the average proportion in the corresponding quarters of the previous ten years.

Diarrhœa was the only one of the diseases in the foregoing list that showed a mortality above the average.

Diarrhœa was the assigned cause of 5,108 deaths last quarter, equal to an annual mortality of 0·59 per 1000, which is greater by 0·21 per 1000 than the decennial average rate for the fourth quarter of the year. In three counties

no deaths from diarrhoea were returned last quarter. Among counties with populations exceeding 100,000 persons the highest rates from this disease were 0·84 in Glamorganshire, 0·86 in Staffordshire and Northumberland, 1·01 in Lancashire, and 1·22 in Durham. In the 76 great towns the average death-rate from diarrhoea was 0·71 per 1000; the rate was highest in the following towns:—Warrington 1·62 per 1000, Blackburn 1·68, Merthyr Tydfil 1·71, Middlesbrough 1·76, Preston 2·17, and Burnley 2·18. In the 142 smaller towns diarrhoea was fatal on the average to 0·63 per 1000 of the population, and caused the highest mortality in Oldbury, Leigh (Lancs.), Gorton, Fenton, Farnworth, Heywood, Swinton & Pendlebury, and Longton. In the remainder of England and Wales the death-rate from diarrhoea averaged 0·43 per 1000.

Measles was returned as the cause of death in 2,471 instances, corresponding to an annual rate of 0·28 per 1000 of the population, which is below the average rate in the fourth quarters of the preceding ten years by 0·07 per 1000. Nine of the counties of England and Wales were free from measles fatality throughout the quarter; the counties with populations of more than 100,000 persons showing the highest fatality from this disease were Devonshire, where the annual rate was equal to 0·52, Norfolk and Durham 0·53, the East Riding of Yorkshire 0·55, Leicester 0·58, and Lancashire 0·63 per 1000 of the respective populations. In the 76 great towns measles caused an average mortality of 0·34 per 1000. In 19 of these towns no deaths from this disease were registered during the quarter. The highest death-rates were 1·94 in Norwich, 2·02 in Rochdale, 2·19 in Bootle, 2·45 in Oldham, 2·82 in Rotherham, and 3·13 in South Shields. In the 142 smaller towns, measles was fatal on the average to 0·34 annually per 1000 persons living, and among these towns showed exceptional fatality in Leigh (Lancs.), Swinton & Pendlebury, Ince in Makerfield, Luton, Bacup, and Hindley. In the remainder of England and Wales the average measles death-rate was 0·20 per 1000 of the population. Among registration sub-districts outside the 218 chief towns, measles was especially fatal in Northam, Winterton, Rawmarsh, Maltby, Barnsbrough, Hetton le Hole, Bedlington, and West Dean.

Diphtheria (exclusive of *croup* unless stated to be *membranous*) was returned last quarter as the cause of 1,986 deaths, a number equal to an annual rate of 0·23 per 1000 living, which is below the average rate in the ten previous corresponding quarters by 0·04 per 1000. None of the counties were entirely free from fatal diphtheria throughout the quarter. Among counties with populations exceeding 100,000 persons the highest death-rates from this disease were 0·37 in Derbyshire, 0·38 in the North Riding of Yorkshire, 0·40 in the East Riding of Yorkshire, 0·42 in Herefordshire, and 0·49 in Berkshire. The average death-rate from diphtheria in the 76 great towns was equal to 0·24 per 1000 of their aggregate population. In three of these towns no deaths from this disease occurred in the course of the quarter. The great towns in which diphtheria showed the highest fatality were the following:—0·54 in Hanley and in Hull, 0·61 in Leyton and in Derby, 0·66 in Walthamstow, and 1·02 in Reading per 1000 of the several populations. In the 142 smaller towns the mortality from this disease averaged 0·22 per 1000, the rate being highest in Fenton, Luton, Todmorden, Nelson, and Wolstanton. In the remainder of England and Wales, diphtheria was fatal in the average proportion of 0·22 per 1000 living. Among registration sub-districts outside the 218 chief towns, diphtheria was especially fatal in Brenchley, Yeovil, Ross, Aslackby, Rivington, Cleckheaton, and Llanelly (Brecknock).

“*Fever*” (including the three chief forms—*typhus*, *enteric fever*, and *pyrexia* of uncertain origin) was the registered cause of 1326 deaths last quarter, equal to an annual death-rate of 0·15 per 1000 of the population, or

0·05 per 1000 less than the average rate in the fourth quarters of the previous ten years. In five counties no deaths from fever were returned last quarter among counties with populations exceeding 100,000 persons, the highest county fever death-rates were 0·26 in Nottinghamshire, 0·31 in the East Riding of Yorkshire, 0·33 in Bedfordshire and in Monmouthshire, and 0·36 in Durham. In the 76 great towns fever caused an average mortality equal to 0·15 per 1000 annually. In four of these great towns no deaths from fever occurred; the towns with the highest fever death-rates were Birkenhead and York, where the rate was equal to 0·34 per 1000, Hull 0·38, St. Helen 0·44, Bolton 0·47, and Wigan 0·55. In the 142 smaller towns fever caused an average mortality equal to 0·17 per 1000 annually, the mortality being highest in Ince in Makerfield, Tipton, Morley, Farnworth, Widnes, and Mansfield. In the remainder of England and Wales, the death-rate from fever averaged 0·15 per 1000. Among registration districts and sub-districts outside the 218 chief towns, fever was especially fatal in Bishop Auckland, Wingate, and Pontypool.

Whooping-cough accounted, last quarter, for 1,233 deaths, and for a death-rate equal to 0·14 per 1000 annually, which is lower by 0·08 per 1000 than the average rate in the ten previous corresponding quarters. In five of the counties of England and Wales no deaths were registered from this disease. In counties with populations exceeding 100,000 persons, the death-rate rose to 0·19 per 1000 in the West and East Ridings of Yorkshire and in Durham, 0·20 in Northumberland, 0·24 in Staffordshire, 0·28 in Glamorganshire, and 0·29 in Derbyshire and in the North Riding of Yorkshire. In the 76 great towns, whooping-cough caused an average death-rate of 0·15 per 1000 living. Eleven of these towns were free from mortality from this disease throughout the quarter, but the death-rate therefrom was equal to 0·40 per 1000 in East Ham, 0·41 in Norwich, 0·52 in Middlesbrough, 0·54 in South Shields, 0·59 in Rotherham, and 0·70 in Swansea. In the 142 smaller towns, the average death-rate from whooping-cough was 0·14 per 1000; the disease being especially fatal in Widnes, Jarrow, Kidderminster, Workington, Longton, and Tunstall. In the remainder of England and Wales, whooping-cough caused an average mortality equal to 0·13 per 1000 annually. Among registration sub-districts outside the 218 chief towns, whooping-cough was exceptionally fatal in Sedgley, Ashover, Stanley, and Festiniog.

Scarlet fever accounted last quarter for the deaths of 897 persons, and for a death-rate of 0·10 per 1000 living, or 0·05 per 1000 less than the decennial average rate for the fourth quarter. Ten of the counties of England and Wales were free from scarlet fever mortality. Among counties with populations exceeding 100,000 persons, the highest rates were 0·13 per 1000 in London, Nottinghamshire, and Cheshire, 0·15 in Lancashire, 0·16 in Middlesex, 0·17 in the West Riding of Yorkshire, and 0·18 in Leicestershire. In the 76 great towns scarlet fever accounted for an average mortality equal to 0·13 per 1000 annually. No deaths from this disease were recorded in seventeen of these towns. The highest scarlet fever death-rates were 0·28 per 1000 in Leicester, 0·30 in Manchester, 0·32 in Merthyr Tydfil, 0·33 in Rotherham, 0·36 in Hanley, and 0·47 in Sheffield. In the 142 smaller towns scarlet fever was fatal in the average proportion of 0·09 per 1000 living, and caused the highest mortality in Longton and in Crewe. In the remainder of England and Wales this disease caused an average death-rate equal to 0·08 per 1000 living. Among registration sub-districts outside the 218 chief towns, scarlet fever was especially fatal in Audenshaw, Wingate, and Whitehaven.

Small-pox was fatal to 12 persons last quarter, as compared with 4, 3, 1, and 5 in the four quarters immediately preceding. Of the 12 deaths recorded last quarter, 8 belonged to the City of Hull.

Violent Deaths.

The deaths in England and Wales that were referred to different forms of violence, either accidental or otherwise, numbered 4,999 last quarter, and corresponded to an annual rate of 0·57 per 1000 of the population, against an average of 0·60 in the ten preceding fourth quarters. In registration counties with populations exceeding 100,000 persons, the lowest death-rates from violence were 0·22 in Wiltshire, 0·35 in Dorsetshire, 0·37 in Suffolk, 0·40 in Middlesex and in Norfolk, and 0·41 in Kent and in Hertfordshire; the highest rates were 0·69 in Denbighshire, 0·71 in Northumberland, 0·74 in Durham, 0·87 in Glamorganshire, and 0·98 in Monmouthshire. In the 76 great towns the mean rate was 0·59 per 1000 living; among the several towns the rate was only 0·09 in Hornsey, 0·11 in Kings Norton, 0·17 in Ipswich, and 0·18 in Bootle; but it rose to 0·94 in Burnley, 0·96 in Tynemouth, 1·07 in Stockton on Tees, and 1·33 in Swansea.

Certification of Causes of Death.

Of the 135,445 deaths registered in England and Wales last quarter, the causes of 124,108, or 91·7 per cent., were certified by registered medical practitioners, and the causes of 9,252, or 6·8 per cent., by coroners after inquest; whilst the causes of the remaining 2,085, or 1·5 per cent., were not certified, the average proportion of uncertified deaths in the ten preceding fourth quarters having been 1·9 per cent. Among registration counties with populations exceeding 100,000 persons the proportion of uncertified deaths was less than 1 per cent. in London, Surrey, Sussex, Middlesex, Wiltshire, Cornwall, Gloucestershire, Cheshire, the East Riding of Yorkshire, and Glamorganshire, but it reached 3·2 in Berkshire, 3·3 in Durham and in Denbighshire, 3·4 in Herefordshire, 3·9 in Carnarvonshire, and 4·0 in Shropshire. In the 76 great towns the mean proportion of uncertified deaths was 1·0 per cent.; but whilst no uncertified deaths were registered in Croydon, Hornsey, Tottenham, West Ham, East Ham, Leyton, Walthamstow, Hastings, Brighton, Bournemouth, Southampton, Great Yarmouth, Plymouth, Devonport, Derby, Leeds, or York, the proportion per cent. rose to 4·1 in Sunderland, 4·4 in Rotherham, 4·9 in St. Helens, 5·1 in Barrow in Furness, and 5·5 in Gateshead.

Inquests.

Inquests were held in England and Wales concerning 9,252, or 6·8 per cent. of the total deaths, the mean proportion in the ten preceding fourth quarters having been 6·7 per cent. In the 76 great towns the proportion of inquest cases was 7·9 per cent., ranging from 1·3 in Kings Norton and in Bootle, 2·7 in St. Helens, and 3·3 in South Shields and in Gateshead, to 10·4 in Swansea, 10·7 in Leeds, 10·9 in Devonport, 11·1 in Southampton, and 11·2 in Croydon.

Deaths in Public Institutions.

The total deaths registered in England and Wales include 25,188, or 18·6 per cent., that occurred either in workhouses, in hospitals, or in lunatic asylums, the mean proportion of deaths in such institutions in the ten preceding fourth quarters having been 15·3 per cent. In the 76 great towns the deaths in public institutions averaged 24·5 per cent. of the total deaths, the lowest percentages in the several towns being 2·7 in Rhondda, 3·9 in Handsworth (Staffs.), 6·5 in Aston Manor, and 7·7 in Gateshead; and the highest 25·8 in Manchester, 27·4 in Brighton, 29·6 in Liverpool, and 39·1 in London.

LONDON.

The figures in Tables V. and VI. include the deaths of Londoners in the Metropolitan workhouses, hospitals, and lunatic asylums situated outside the County of London, but exclude the deaths of persons not belonging to London that occurred in the London Fever Hospital, in the Metropolitan Asylums Board Hospitals, and in the Middlesex County Lunatic Asylum, within the County of London. The death-rate, thus computed, was equal to 16·0 annually per 1000 living (Table VI.). If, however, all the deaths of non-Londoners that occurred in hospitals or other public institutions in London be excluded, the death-rate will not exceed 15·4 per 1000. Table X. shows the death-rate in London after this further correction has been applied; and, since the registered mortality in many London districts is seriously affected by the deaths in hospitals and other public institutions, the death-rates in the Metropolitan Boroughs are also shown, corrected by the distribution of all deaths in public institutions to the Boroughs to which the deceased persons had belonged.

EDINBURGH, GLASGOW, DUBLIN, AND BELFAST.

The annual birth and death-rates per 1000 living in these towns last quarter were as follows:—

—								Birth-rate.	Death-rate.
Edinburgh	20·7	16·2
Glasgow	27·8	18·2
Dublin	27·9	24·2
Belfast	26·9	18·2

COLONIAL AND FOREIGN CITIES.

The Registrar-General has been favoured with returns of vital statistics by the authorities of 27 of the principal Colonial and Foreign Cities. From these a summary has been constructed for the past quarter (Table XI.). Excluding the Indian cities, the highest and lowest annual birth and death-rates during the fourth quarter of 1906 were as follows:—

BIRTH-RATES.

—				Highest per 1000 living.	—				Lowest per 1000 living.
Trieste	33·3	Paris	17·6
Breslau	30·2	Brussels	17·7
Copenhagen	28·9	Prague	20·2
Bucharest	28·7	Berlin	22·8
Christiania	28·4	Antwerp	22·9
Munich	28·2	Rome	23·0
					London	...	25·5		

DEATH-RATES.

—				Highest per 1000 living.	—				Lowest per 1000 living.
Moscow	26·3	Christiania	12·5
Trieste	23·6	Amsterdam	13·1
St. Petersburg	23·5	Stockholm	13·2
New Orleans	21·1	Antwerp	13·3
Bucharest	20·3	Copenhagen	14·1
Breslau	19·5	Chicago	14·2
Prague	18·2					
				London		...		16·0	

Small-pox caused 11 deaths in St. Petersburg, 5 in Moscow, 2 in Paris, 1 in Antwerp, and 1 in Rio de Janeiro.

Measles was most fatal in proportion to population in Amsterdam, St. Petersburg, Moscow, Prague, and Buda-Pesth; *scarlet fever* in St. Petersburg, Moscow, Chicago, and Buda-Pesth; *diphtheria* in St. Petersburg, Christiania, Moscow, Chicago, Philadelphia, and New York; *whooping-cough* in Breslau, St. Petersburg, Moscow, Amsterdam, and Christiania; "*fever*" in St. Petersburg, Philadelphia, Bucharest, Moscow, and Rome; and *diarrhæal diseases* in Moscow, Munich, St. Petersburg, Antwerp, and New Orleans.

Infantile Mortality.—Among those cities for which the figures are available, the proportion of deaths of children under one year of age to 1000 registered births ranged from 78 in Christiania, 79 in Stockholm, 103 in Paris, and 105 in Amsterdam, to 167 in Prague, 170 in Antwerp, 172 in Trieste, 178 in Breslau, and 186 in Munich.

INDIAN CITIES.—The death-rate was equal to 31·3 per 1000 in Calcutta, 34·5 in Bombay, and 42·4 in Madras. *Small-pox* caused 45 deaths in Calcutta, 14 in Madras, and 5 in Bombay; *measles* caused 20 deaths in Madras, 12 in Bombay, and 4 in Calcutta. Under the heading "*fever*" 2,003 deaths were classed in Calcutta, 1,325 in Bombay, and 1,293 in Madras, including 147 deaths in Calcutta and 261 in Bombay from *plague*. The mortality from *diarrhæal diseases* was excessive in each of these Indian cities; *Asiatic cholera* caused 842 deaths in Calcutta, 86 in Bombay, and 100 in Madras.

RETURNS OF NOTIFIED CASES OF INFECTIOUS DISEASE.

At the request of the Local Government Board, and of the London County Council, and on their responsibility with respect to accuracy, tables have been inserted, in continuation of those published in previous returns, showing the numbers of cases of infectious sickness notified, under Act of Parliament, to the Sanitary Authorities of certain of the largest towns in England and Wales, during the fourth quarter of the year 1906 (*see* pages xxvii—xxxii).

The Year 1906.

According to the quarterly returns furnished by local registrars, 934,391 births and 530,715 deaths were registered in England and Wales in the year 1906. The natural increase of population, by excess of births over deaths, was therefore 403,676, the average annual increase in the preceding five years having been 404,392.

According to Returns issued by the Board of Trade it appears that during the twelve months ended 31st December last, 557,815 passengers left the United Kingdom for places out of Europe. Persons of British origin numbered 325,036, of whom 219,660 were English, 53,174 were Scottish, and

52,202 were Irish. Persons of Foreign origin numbered 229,235, whilst the nationality of 3,544 others was not stated.

Compared with the numbers in the corresponding period of the previous year, the proportion of English passengers showed an increase of 28·9 per cent., that of Scottish an increase of 28·1 per cent., and that of Irish an increase of 4·1 per cent.

The birth-rate in England and Wales in 1906 was 27·0 per 1000 of the population, which is 0·2 per 1000 below the rate in 1905, and lower than the rate in any other year on record; compared with the average in the ten years 1896-1905, the birth-rate in 1906 shows a decrease of 1·7 per 1000.

The death-rate in 1906 was 15·4 per 1000, which was 0·2 per 1000 above the rate in 1905; compared with the average rate in the ten years 1896-1905, the death-rate in 1906 shows a decrease of 1·4 per 1000.

The 530,715 deaths registered in 1906 included 123,934 of infants under one year of age, 234,423 of persons aged between one year and 60 years, and 172,358 of persons aged 60 years and upwards. The rate of mortality among infants under one year of age to 1000 registered births was 133, which is 5 per 1000 above the rate in 1905. Compared with the average in the ten years 1896-1905, the rate of infantile mortality shows a decrease of 14 per 1000. The death-rate among persons aged between one year and 60 years was 7·5, and that among persons aged 60 years and upwards was 67·4, per 1000 of the estimated populations at the respective groups of ages.

The total deaths registered included 30,108 from diarrhoea, 9,308 from measles, 8,032 from whooping-cough, 5,987 from diphtheria, 3,434 from scarlet fever, 3,173 from "fever" (including the three principal forms, *typhus*, *enteric fever*, and *pyrexia* of uncertain origin), and 21 from small-pox. Thus 60,063 deaths were attributed to these epidemic diseases, corresponding to a rate of 1·73 per 1000 living, against 1·46, 1·94, and 1·52 respectively in the three preceding years.

Birth-rate, Death-rate, and Analysis of Mortality in the year 1906.

—	ANNUAL RATE PER 1000 LIVING.									
	Births.	Deaths.	Principal Epidemic Diseases Cols. 4-10.	Small-pox.	Measles.	Scarlet Fever.	Diphtheria.	Whooping Cough.	Fever.	Diarrhoea.
Cols.	1.	2.	3.	4.	5.	6.	7.	8.	9.	10.
England and Wales	27·0	15·4	1·73	0·00	0·27	0·10	0·17	0·23	0·09	0·87
76 Great Towns -	27·9	15·9	2·21	0·00	0·40	0·12	0·19	0·28	0·09	1·16
142 Smaller Towns	26·5	14·5	1·71	—	0·22	0·09	0·17	0·20	0·09	0·94
England and Wales less the 218 Towns.	26·3	15·1	1·18	0·00	0·14	0·08	0·16	0·19	0·09	0·52

To different forms of violence 19,638 deaths were referred, being in the proportion of 0·57 per 1000 of the population, against 0·58, 0·57, and 0·57 respectively in the preceding three years.

The 530,715 deaths included 36,147 cases, or 6·8 per cent., in which inquests were held; and 8,109 cases, or 1·5 per cent., in which the causes were not certified either by registered medical practitioners or by coroners.

The foregoing statistics for the year 1906, having been derived from returns furnished quarterly by the local registrars, are subject to revision when the causes of death and other details shall have been finally classified and tabulated for publication in the Registrar-General's Sixty-ninth Annual Report, which is now in course of preparation.

TABLES.

TABLE I.—**Marriages, Births, and Deaths** registered in **England and Wales** in the Years **1896-1906**, and in each Quarter of those Years.

YEAR - - -	1896	1897	1898	1899	1900	1901	1902	1903	1904	1905	1906
Marriages - - -	242,764	249,145	255,379	262,334	257,480	259,400	261,750	261,103	257,856	260,489	261,103

TABLE V.—76 Great Towns.—Population: Births, Deaths, and Meteorology in the 13 Weeks ended 29th December, 1906.

NOTE.—The 76 Great Towns are those with populations exceeding 50,000 persons at the Census of 1901. They are arranged in the order of the Registration Districts in which they are situated, those towns included in the Outer Ring of the Metropolitan Police District being placed, for convenience, immediately after London. The Registrars alone must be considered responsible for the accuracy of the figures upon which these returns are based.

TOWNS.	ESTIMATED POPULATION in the middle of 1906.	BIRTHS.	DEATHS.	Deaths from										MEAN TEMPERATURE (Degrees Fahrenheit).	TOWNS.

TABLE VII.—One hundred and forty-two smaller Towns.—Population; Births and Deaths in the QUARTER ended 31st December, 1903.

NOTE.—The 142 Smaller Towns are those with populations of 20,000 but not exceeding 50,000 persons at the Census of 1901. They are arranged alphabetically under the Registration Counties in which they are situated. The Registrars alone must be considered responsible for the accuracy of the figures upon which these Returns are based.

The Registration Districts, 635 in number, are collections of contiguous Parishes or Places, combined for purposes connected with the Registration of Births, Deaths, and Marriages, and are nearly always identical with the Poor Unions of the same names; they are here arranged topographically under the Registration Counties.

^a See page 2, note ^b.

^b For London, the births and deaths given for the quarter are derived from the Weekly Returns made by the Registrar-General.

The Registration Sub-districts (2032 in number) are sub-divisions of the Registration Districts in which the Births and Deaths are registered by Registrars severally appointed for that purpose. The letter W denotes that the Sub-district runs within its limits a Workhouse belonging to the District or Union; w indicates a Workhouse belonging wholly or partly to other Districts than that in which it stands; F a Hospital for Infectious Diseases; H another Hospital; L a Lunatic Asylum. When a sub-district contains more than one institution of either kind, the number is indicated by a figure prefixed to the letter.

See page 2, note b.
3: 2.—On 1st December, 1906, Tottenham Court (2) and Gray's Inn Lane (3) sub-districts were united and called South Pancras (2). The births and deaths are shown as if the change had taken place at the beginning of the quarter.

CHANGES IN REGISTRATION DISTRICTS AND SUB-DISTRICTS IN THE QUARTER ENDED 31ST DECEMBER, 1906.

Changes in Registration boundaries are made by order of the Registrar-General with the consent of the Local Government Board. Those changes which alter the boundaries of Registration Districts are necessitated by changes in the boundaries of Poor Law Unions.

METEOROLOGY.

REMARKS ON THE WEATHER OVER THE UNITED KINGDOM DURING THE
QUARTER ENDED DECEMBER 31ST, 1906.

EXTRACTED FROM THE
MONTHLY WEATHER REPORTS
OF THE
METEOROLOGICAL OFFICE

BASED ON OBSERVATIONS AT 152 STATIONS,
TOGETHER WITH TABLES OF METEOROLOGICAL DATA AT 58 STATIONS
IN ENGLAND AND WALES, AND THE ENGLISH CHANNEL.

OCTOBER, 1906.

General Summary.—Very changeable and unsettled atmospheric conditions were in the ascendant during the greater part of the period under review. The distribution of barometric pressure differed widely from what had been experienced for some time previously, disturbances being not only more numerous, but most of them passed across some portion of the country. On the other hand, there was an almost entire absence of areas of high pressure. The weather consequently was frequently wet, the number of days on which precipitation was measured being in nearly all districts considerably in excess of the normal for the time of year. Hail was experienced on various occasions in many districts, sleet or snow in some northern districts on the 13th, 19th, 30th, and 31st. Thunderstorms were, for the season, rather frequent, being reported in various localities on the 1st, 2nd, 9th, 10th, 13th, 16th, 22nd, and 29th, thunder or lightning alone on several other days. Although the month was of a very disturbed character there were few days on which the wind force exceeded that of a fresh gale, but a strong gale was felt on the middle portion of the English Channel on the 2nd, in Caithness on the 19th, in Donegal on the 20th, and generally along the north-western and northern coasts on the 26th, when Malin Head reported the strength of a whole gale. Days on which fog occurred were rather numerous, but usually the fog was of no great density, and as a rule it was limited to the early part of the day. The most notable feature of the period was the almost uninterrupted mildness throughout England, while in Ireland and Scotland the only break was about the middle of the month. Frosts were rare, the night temperatures seldom passing below 30° anywhere, and in several neighbourhoods minima below 40° were uncommon. At some stations in the south-eastern quarter of England it was the mildest October on record. For the whole month pressure was well below the usual level; there was a decided excess of temperature; the winds were chiefly Southerly to Westerly in direction; rainfall was very frequent and above the normal; and bright sunshine was rather variable, in most places in defect. According to newspaper reports two earthquake shocks were felt in the valley of the Devon, Stirlingshire, early on the morning of the 8th.

Pressure.—*Mean* at 8 a.m. ranged from 29·92 ins. at Jersey, and above 29·8 ins. over the south and south-east of England to below 29·7 ins. over the more northern and north-western parts of the kingdom, 29·63 ins. at Malin Head and Stornoway. In all cases the values were less than the average; the deficiency being 0·02 in. at Jersey, and 0·04 in. at Dungeness, while it was as much as 0·18 in. on the west and north coasts of Ireland. The general distribution of the mean results was rather different from the normal, the area of lowest values being off the north-western instead of beyond the northern coasts, so that the type of conditions was South-Westerly rather than Westerly, and the gradient was steeper than usual. *Highest* readings were registered on the 25th, when they were above 30·4 ins. in

most parts of England, 30·46 ins. at Oxford. *Lowest* values were 29·08 ins. at Scilly on the 2nd, 29·15 ins. at Blacksod Point on the 8th, 29·39 ins. at Sumburgh Head on the 15th, 29·16 ins. at Stornoway on the 17th, and at Valencia on the 20th, and 28·99 ins. at Sumburgh Head on the 23th. *Range*, in the absence of any very high pressures, was moderate, from an inch at Birr Castle to 1·4 in. at Scilly, at most stations between 1·1 in. and 1·2 in.

Depressions.—The centres of most of the month's disturbances passed over some portion of the country, and, as will be seen from the preceding paragraph, several of them were of considerable depth. In one case the path of the minimum of pressure was an erratic one; at first advancing north-eastward, then southward outside the Irish coast, curving round to the mouth of the English Channel, thence taking a north-easterly course across England and disappearing off the Norwegian coast.

Anticyclones.—Nearly all the high pressure systems were found over Eastern Europe, the only anticyclone which visited these islands passing eastward across England on the 25th.

Winds.—Following closely the mean disposition of barometric pressure the winds were largely from Southerly to Westerly points of the compass, except in the Shetlands, where a South-Easterly current prevailed. The days on which the force of a gale was attained numbered 7 at Blacksod Point and Malin Head, 3 at Holyhead, Pembroke, Portland Bill, and Laudale.

Temperature.—*Mean at sea level* ranged from nearly 57° at Guernsey and above 54° at several of the more southern and south-eastern stations to below 49° over the greater part of Scotland and in the inland parts of Ireland, 47° at Sumburgh Head. The general distribution agreed fairly with the normal, but with only two exceptions, both in Wales, the actual values were above the average, the excess as a rule being very marked, especially in the southern districts, many stations showing an excess of more than 4°, a few more than 5°, Westminster 5·5°. Both the maximum and the minimum temperatures were recorded on very varied dates. *Highest* values, 74° at Whitby (10th), Cromer and Geldeston (11th), 72° at Cambridge (11th), Maidenhead (1st); 70° at Killarney (1st), 68° at Lairg (7th). *Lowest* values, 21° at Lairg (30th), 23° at Llangammarch Wells (20th), Nairn and Balmoral (30th), and 24° at Markree Castle (19th), and Kilkenny Castle (20th). *Range* exceeded 46° at Lairg and was 40° to 42° at a few other stations in England, Scotland and Ireland, but was only 24° at Deerness, 23° at Pembroke, and 22° at Scilly. *Vapour Pressure* ranged from 0·26 in. at Strathpeffer (9 a.m.) to 0·39 in. at Clacton-on-Sea (9 p.m.). *Relative Humidity* ranged from 82 per cent. at Dungeness and Yarmouth (6 p.m.), and Trinity College, Dublin (9 a.m.), to 97 per cent. at Malin Head (8 a.m.). *Mean Earth Temperature* at 1 ft. depth ranged from 50·5 at Bettws-y-Coed to 56° at Bath; and at 4 ft. depth from 50° at Aberdeen to 58° at Bath.

Rainfall.—At a few stations there was a deficiency of precipitation, at Stornoway to the extent of 3·7 ins., but generally it was above the average, the excess amounting to more than 4 ins. at Pembroke and Marchmont. The aggregate totals for the month exceeded 7 ins. at a number of places in the west and north, 8·9 in. at Fort William, and 9·1 ins. at Port Talbot, while the smallest were 1·9 in. at Broadstairs, and 1·8 in. at Margate. The number of days on which precipitation was measured was generally large, 31 at Roche's Point and Foynes, and 30 at Edenfel and Killarney, against 14 at Lowestoft and Southend-on-Sea, and 13 at Folkestone. Falls of an inch or more in 24 hours occurred on twelve days, the heaviest being over the north-eastern districts on the 18th and 19th, 2 ins. at Alnwick Castle, and 2·1 ins. at Balmoral.

Bright Sunshine.—The duration of bright sunshine was somewhat variable, Stonyhurst returning a loss of 28 hours, and Felixstowe a gain of 31 hours. The percentage of the possible duration ranged from 18 at Glasgow and Manchester (Whitworth Park) to 45 at Felixstowe.

NOVEMBER, 1906.

General Summary.—During the period under review the atmospheric conditions throughout the British Isles were of a very variable character. Several of the low pressure systems which affected our weather were unusually slow in their movements, and resulted in more rain than wind, the gales which were experienced being as a rule of no great strength. There were two separate anticyclonic periods, occupying, between them, nearly half the month, the earlier, and shorter one producing a cool North-Easterly to Easterly type of weather, the later one a very mild South-Westerly type. This period of unseasonable warmth was the most remarkable feature of the month. Down until the 20th there was nothing exceptional in the temperature records, but on the 21st occurred a decided increase in every portion of the kingdom, so that on four successive days, to the 24th, there were numerous instances of maximum day readings of 60° and upwards, 66° being registered at Strathpeffer and 68° at Lairg. Even in the Orkneys the temperature record on the 23rd was—maximum 58°, minimum 51°, both extremes being remarkably high for this northern locality. After the 24th there was a slight reduction of temperature generally, but the remainder of the month continued very mild, afternoon maxima of 55° and upwards being of daily occurrence. There

was, practically, no frost during the last ten days, the nights being, relatively, as mild as the days. All over the country the effect upon vegetation of this unusual warmth was very marked—"The fall of the leaves has been much delayed in consequence of the warmth and moisture, and the grass on pasture lands has continued growing to a later date than usual."—(Belvoir Castle Observer.) The rainfall was very unequally distributed, overabundant in the north and east of Scotland and over the eastern half of England, defective elsewhere, and especially so over southern Ireland. On several occasions hail, sleet or snow was experienced, but the falls were unimportant. Considering the period of the year fogs were both rare and of no great density. Auroral displays were witnessed at Stokesay on the 27th, and at Epsom on the 29th. For the month as a whole pressure was a little lower than usual; the winds were for the most part from between South and West; temperature was well in excess of the normal; rainfall differed very unequally from the normal; and the duration of bright sunshine was deficient in most localities.

Pressure.—*Mean* at 8 a.m. ranged from 29·95 ins. at Jersey and above 29·85 ins. over the southern parts of England and Ireland to below 29·75 ins. in the north of Scotland, 29·69 ins. at Sumburgh Head. The values were everywhere somewhat below the average, by nearly 0·08 ins. at Spurn Head, but only by 0·004 in. at Scilly. The general distribution of mean pressure consequently did not differ materially from the normal. *Highest* readings were recorded between the 9th and 14th, Oxford reaching 30·55 ins. on the 11th, and between the 22nd and 29th, Jersey touching 30·60 ins. on the 25th. *Lowest* values occurred between the 2nd and 5th, 28·77 ins. at Jersey on the 4th, and on the 17th and 18th, 28·72 ins. at Wick. *Range* was, therefore, large, nearly everywhere between 1·4 in. and 1·6 in., but at Jersey it exceeded 1·8 in.

Depressions.—The disturbances of the month were not numerous for the time of year, but owing to their slow rate of progression some of them remained in our neighbourhood for several days. The first week was divided between two depressions, which pursued very irregular, complicated paths. Beyond our western coasts only one low pressure system, also a very slow moving one, could be detected going on a northerly course well out on the ocean, taking several days to pass Iceland. In the deep disturbance of the opening days the barometer was below 29 ins. when the system left the Mediterranean on October 31st, when it passed out to the Atlantic off the north of Ireland on November 3rd, and when it returned to the English Channel on the following day.

Anticyclones.—On the 9th an area of high pressure from the Greenland-Iceland region appeared off our north-western coasts, and moving slowly down across the country it passed to the Continent on the evening of the 13th, eventually disappearing across the Black Sea. Between the 22nd and 29th the anticyclone which embraced these islands had its central space on the Continent, between the Bay of Biscay and Russia.

Winds.—In all districts winds from Southerly to Westerly points prevailed, but there was a fair proportion of North-Easterly and Easterly breezes, due to the pressure in the early part of the month being higher in the north than in the south. Gale force was attained on 6 days at Blacksod Point and Portland Bill, and on 5 days at Deerness and Bettws-y-Coed.

Temperature.—*Mean at sea level* ranged from slightly under 51° at Guernsey and Scilly, and above 48° at most of the south and south-west coast stations to below 46° in various parts of the kingdom, 43·5 at Crathes. The general distribution agreed fairly with the normal, but in nearly every instance the actual values were above the average by more than 3°·5 at some Scottish stations, 3°·9 at Eastbourne, and 4°·2 at Strathpeffer. *Highest* readings were recorded generally on the 22nd, 23rd, or 24th, and were unusually high, 68° at Lairg, 66° at Strathpeffer (23rd), 65° at Dublin (Trinity College) (24th), and 64° at Shrewsbury (22nd), values above 60° being common to all districts. *Lowest* readings occurred on very varied dates, but mainly between the 10th and 21st, 21° at Llangamarch Wells (13th), 22° at Wokingham (12th), 23° at Marlborough (13th), and at 25° Markree Castle (10th), Bath (13th), Shrewsbury (14th), and Maidenhead (19th). *Range* was as much as 42° at Lairg, 39° at Shrewsbury and Wokingham, and 37° at Llangamarch Wells, but 20° or less at a few south-western coast stations, only 13° at Scilly. *Vapour Pressure* ranged from 0·24 in. at Sumburgh Head (6 p.m.) and Strathpeffer (9 p.m.) to 0·32 in. at Scilly (6 p.m.). *Relative Humidity* ranged from 81 per cent. at Trinity College, Dublin (9 a.m.), to 95 per cent. at Skegness (8 a.m.) and Malin Head (8 a.m. and 6 p.m.). *Mean Earth Temperature* at 1 ft. depth ranged from slightly under 45° at Bettws-y-Coed, Sheffield, and Newton Rigg, to a little over 48° at Bath; and at 4 ft. depth from 46°·5 at Aberdeen to nearly 53° at Bath.

Rainfall.—Generally over the north and east of Scotland and eastern and southern England the rainfall exceeded the average, elsewhere it was mainly deficient. Lairg had an excess of 4·4 ins., Balmoral 4·2 ins., and various stations in the south-east of England from 3 ins. to 4 ins., while in the west there was a deficiency of 2·1 ins. at Poynes and Waterford, 2·6 ins. at Valencia, and 2·9 ins. at Killarney. The largest aggregates for the month were 11·4 ins. at Glencarron, 8·7 ins. at Arlington, and even in Kent and Sussex from 6 ins. to 7 ins. The smallest totals were all in the west, 1·4 in. at Trinity College, Dublin, and 1·3 at Rhyl and Kilkenny Castle. Falls of more than an inch in 24 hours occurred on a number of days, on the 8th 1·7 in. at Oundle, 1·9 in. at Woburn, and 2 ins. at Arlington. The days on which

precipitation was measured numbered 30 at Stornoway, and 29 at Lairg and Glencarron, but only 14 at Whitby, Kingstown, Kilkenny Castle, and Waterford, and 12 in the Forest of Dean (200 ft.).

Bright Sunshine.—Nearly everywhere the duration of bright sunshine was below the average, by 27 hours at St. Leonards, and 28 hours at Tunbridge Wells. The percentage of the possible duration varied from 8 at Fort Augustus, and 9 at Manchester, Newcastle-on-Tyne and Nottingham to 29 at Tenby and 31 at Newquay.

DECEMBER, 1906.

General Summary.—The closing month of the year was marked by very variable atmospheric conditions in all parts of the British Isles. During the first week the weather was rather disturbed, rain being of frequent occurrence, varied in places by hail or sleet, while the wind was very brisk. In the night of the 5th and 6th it blew hard from between West and North-West on the western and south-western coasts, attaining the force of a whole gale on the English Channel, and a storm off the north of Ireland. In all districts, however, this period was very mild. It was followed by a cold week, with sharp frost in many localities. Hail, sleet and snow were experienced in most places, and locally on the coasts of Norfolk and Suffolk there were unusually heavy falls of snow on the 9th and 10th. A very quiet anticyclonic week succeeded, as a rule cloudy or overcast, but there was little or no precipitation, although the atmosphere was soft and humid. The weather was exceedingly mild in Scotland and Ireland, the mean temperature over the north of Scotland being more than 7° in excess of the normal for the district, and slightly above the current value for the English Channel district. This gave way to a boisterous, wintery spell, the remainder of the month witnessing the most inclement weather experienced for many years, the whole kingdom being affected. On the afternoon of Christmas Day the appearance of a small disturbance on the north coast of Ireland was attended by snow, and in the course of the evening and night the fall extended to practically all districts, and thenceforward to the close of the year snow or sleet was of almost daily occurrence. In some localities there were very heavy falls of snow, but as a general rule the yield of water was small, there being few instances of more than $\frac{1}{2}$ in. on any one day. Owing, however, to the prevailing high wind many great snowdrifts were formed in various parts of the country, impeding road and railway traffic, and interrupting telegraphic communication. At Malin Head a strong gale was maintained continuously through three days (26th–28th). The lowest temperatures of the year were recorded in the closing days. The mean temperature for the 52nd week was nearly 7° below the average over the country generally; in the eastern counties the divergence from the average was more than 8° . Thunderstorms occurred in many localities on several days, accompanying the heavy snowfalls of the 9th and 10th on the east coast, and the more general snowstorms on the 26th, 27th, and 28th. An auroral display was witnessed in the north of Scotland on the evening of the 8th. For the month as a whole pressure was in excess over the greater part of the kingdom; the winds were mainly from between South, West, and North; temperature was nearly everywhere in defect; precipitation was unequally distributed; and bright sunshine was above the normal in most districts.

Pressure.—Mean at 8 a.m. ranged from 30.09 ins. at Valencia, and above 30 ins. generally over the south-western quarter of the kingdom to below 29.8 ins. over northern Scotland and 29.64 ins. at Sumburgh Head. The values were a little below the average in Shetland and the more eastern stations in England, by 0.03 in. at Yarmouth, but elsewhere they were above, the excess increasing decidedly westward, to as much as 0.22 in. at Valencia. The distribution of mean pressure, consequently, differed to some extent from the normal, and the gradient was rather more steep than usual. Highest readings were recorded on the 20th and 21st, when the barometer rose to from 30.6 ins. to 30.65 ins. in many places. Lowest values occurred on the 5th, 28.81 ins. at Sumburgh Head, and on the 26th, 28.80 ins. at Sumburgh Head and 28.84 ins. at Dungeness—separate depressions. Range was, therefore, considerable, from 1.1 ins. at Valencia to more than 1.7 ins. at Aberdeen, Shields and Dungeness.

Depressions.—The disturbances of the month were rather numerous, and both their paths and their rate of translation were very varied. More of them passed down the North Sea than followed the more usual northerly course on the ocean beyond our western coasts.

Anticyclones.—During the night of the 6th and the first part of the 7th the central space of a high pressure system, with barometer readings above 30.4 ins., crossed the southern half of the kingdom from west to east. All the other anticyclones had their maxima of pressure somewhere on the Continent, between Spain and Russia. On the 20th and 21st, when the barometer was at its highest level in this country, the centre of the system with readings above 30.9 ins. was over Eastern Europe.

Winds.—There was a great prevalence of Southerly to Westerly and Northerly winds over the country generally, but at the southern stations there was a fair proportion of South-Easterly to North-Easterly breezes. Days on which gale force was experienced numbered 13 at Deerness, 9 at Malin Head, and 5 or more at several other stations.

Temperature.—*Mean at sea level* ranged from slightly above 46° at Scilly and above 42° at many south-western and western stations to below 38° over most of the northern and eastern districts, less than 36° in places. The general distribution agreed fairly with the normal, but the actual values were in nearly all cases below the average by more than 3° at St. Leonards, Lowestoft, Llangammarch Wells and Dungeness. *Highest* readings were registered in most places between the 2nd and the 5th, 59° at Saltburn-by-the-Sea, 58° at Crathes, Ballinacurra and Rhyl, but Clathick had 58° on the 19th and Wick a similar reading on the 21st. *Lowest* values occurred between the 26th and the 31st in England, 3° at Swarraton (28th); in Scotland, 4° at Crathes (30th); and in Ireland, 8° at Markree Castle (29th). *Range* was generally large, exceeding 40° at numerous stations, 50° at Swarraton, and 54° at Crathes. At Scilly it was 20° . *Vapour Pressure* ranged from 0.185 in. at Aberdeen (6 p.m.) to 0.263 in. at Blacksod Point (6 p.m.). *Relative Humidity* ranged from 77 per cent. at Jersey (6 p.m.) to 98 per cent. at Stornoway (8 a.m. and 6 p.m.). *Mean Earth Temperature* at 1 ft. depth ranged from 38° at Nottingham to 43° at Bath and Plymouth; and at 4 ft. depth from 43° at Aberdeen to 49° at Bath.

Rainfall.—The precipitation, which was frequently in the form of hail, sleet or snow, varied considerably, being above the average in many localities, below it in others. Glencarron returned an excess of 3.3 ins., while Killarney had a deficit of 3.5 ins. and Roche's Point of 3.8 ins. The largest aggregates were 13.7 ins. at Glencarron and 8.7 ins. at Fort William and Laudale; the smallest, 1.4 in. at Leith and 1.3 in. at Portland Bill and Spurn Head. There were few instances of more than an inch in a day, but on the 2nd Glencarron had 3.65 ins. The number of days on which any precipitation was measured ranged from 30 at Blacksod to 9 at Clathick.

Bright Sunshine.—The duration of bright sunshine was above the average at the great majority of stations, to the extent of 23 hours at Southampton, the percentage of the possible duration ranging from 33 at Bournemouth and 30 at Eastbourne and Totland Bay to 4 at Stornoway and 2 at Fort Augustus.

TABLES OF METEOROLOGICAL DATA FOR ENGLAND AND WALES AND THE ISLANDS IN THE ENGLISH CHANNEL.

Prepared in the Meteorological Office under the direction of
W. N. Shaw, Sc.D., F.R.S.

In compiling the following Tables (pp. 80 to 89) the stations have been grouped into eight Districts, namely, 1. London; 2. England, Central; 3. England, South; 4. England, East; 5. England, North-East; 6. England, North-West with North Wales; 7. England, South-West with South Wales; 8. The Islands in the English Channel. Each of these Districts is represented by a number of stations ranging from 3 to 12.

In making a selection from the whole number of stations available, endeavour has been made to represent as far as possible the various meteorological conditions of the several districts. Regard has been had not only to uniformity of geographical distribution, but also to the situation of the stations with regard to the sea coast, their height above sea level, and to their special characteristics as representing urban, suburban, or rural meteorological conditions.

Observations of earth temperature and of wind-force are included in the Tables. The wind observations at Falmouth and Kew are based on the records of a standard Robinson anemometer (factor 2·2). Velocities of between 13 and 38 miles in the hour have been entered in the Tables as strong winds, velocities of 39 miles in the hour, or above, as gales. At the remaining stations the wind-force observations are personal estimates in accordance with Beaufort's scale, and are specially liable to be affected by local circumstances. No previous comparison of corresponding data is available for the purpose of checking the results.

The stations selected, with the names of the Observers, are shown below.

LIST OF STATIONS AND OBSERVERS.

Station.	Observer.	Station.	Observer.
1. LONDON:—		3. ENGLAND, S:—	
Greenwich ..	The Royal Observatory.	Southampton ..	A. Vaughan, for Director General of Ordnance Survey.
Kew	The Kew Observatory (National Physical Observatory).	Portsmouth ..	A. Mearns Fraser, M.D., M.O.H., for the Corporation.
Barnet	T. H. Martin, A.M.I.C.E.	Brighton ..	A. Newsholme, M.D., M.O.H., for the Corporation.
Camden Square ..	H. Robert Mill, D.Sc., LL.D.	Ventnor ..	Miss Gibson, for Royal National Hospital for Consumption.
Westminster ..	The Meteorological Office.	Portland Bill ..	The Meteorological Office.
Norwood ..	W. Marriott.	Eastbourne ..	S. R. Henderson, for the Corporation.
2. ENGLAND, CENTRAL:—		Salisbury ..	Thos. Challis, for the Earl of Pembroke.
Sheffield ..	E. Howarth, The Weston Park Museum.	Canterbury ..	A. Lander.
Nottingham ..	Arthur Brown, M.Inst.C.E., and Philip Boobbyer, M.D., M.O.H., for the Corporation.	4. ENGLAND, E:—	
Wakefield ..	A. Clyde.	Lowestoft ..	C. W. Edwards, for the Corporation.
Birmingham ..	A. Cresswell, for the Midland Institute Observatory.	Clacton-on-Sea ..	A. W. Shadick, for the Urban District Council.
Coventry ..	E. Hugh Snell, M.D., M.O.H., for the Corporation.	Dunmow ..	Thos. Hacking, The Countess of Warwick's Agricultural School.
Buxton	W. Pilkington.	Cambridge ..	R. Irwin Lynch, M.A., The Botanic Gardens.
Cheltenham ..	A. C. Saxby, for the Corporation.	Norwich (Eaton) ..	A. W. Preston.
Oxford	The Radcliffe Observatory.	Bennington ..	Rev. J. D. Parker, LL.D.
Shrewsbury ..	Capt. W. E. Manser, R.E.	Hillington ..	Rev. H. E. B. Folkes, M.A.
Stokesay ..	Rev. W. La Touche, B.A.		
Berkhamsted ..	E. Mawley.		
Belvoir Castle ..	W. H. Divers, for the Duke of Rutland, K.G.		

Station.	Observer.	Station.	Observer.
5. ENGLAND, N.E.:—		7. ENGLAND, S.W., WITH SOUTH WALES:—	
North Shields	The Meteorological Office.	Plymouth ..	H. Victor Prigg, A.M.I.C.E., for the Corporation.
Spurn Head ..	The Meteorological Office.	Woolacombe ..	B. Fanshawe.
Durham ..	Prof. R. A. Sampson, M.A., F.R.S.	St. Ann's Head, Pembroke.	The Meteorological Office.
York	Oxley Grabham, M.A., for Yorkshire Phil. Soc.	Bristol .. (Clifton.)	D. Rintoul, M.A. Clifton College.
Hull	H. B. Witty, for the Cor- poration.	Falmouth ..	The Meteorological Office.
Cockle Park .. (near Morpeth).	T. B. Hewetson, for the Northumberland County Council.	Barnstaple ..	Thos. Wainwright. The North Devon Athenæum.
Tealby	Rev. S. Lewin, B.A.	Bath	W. H. Symons, M.D., M.O.H., for the Corporation.
6. ENGLAND, N.W., WITH NORTH WALES:—		Llangammarch Wells.	W. Black Jones, M.D.
Llandudno ..	W. Little, for the Town Council.	8. THE CHANNEL:—	
Liverpool .. (Bidston.)	W. E. Plummer, M.A. Bid- ston Observatory.	Scilly	The Meteorological Office.
Aspatia ..	J. Smith Hill, B.Sc. The Agricultural College.	Jersey	The Meteorological Office.
Manchester ..	J. Niven, M.A., M.B., M.O.H., for the Corporation.	Guernsey ..	Adolphus Collette.
Carlisle.. ..	Studholme Cartmell, for the Corporation.		
Stonyhurst ..	Rev. W. Sidgreaves, S.J. The Observatory.		

DAYS OF "CLEAR SKY" AND "OVERCAST."

A day is reckoned as a day of "clear sky" if the average of the estimates of the fraction of sky covered by cloud at the two hours of observation is less than .2, and as an "overcast" day if the average is greater than .8. At the Royal Observatory, Greenwich, records are kept of days persistently cloudless and days persistently overcast from midnight to midnight. The numbers of such days for the current quarter are:—Clear sky, 0, 0, 0; and Overcast, 1, 5, 4.

Oxford:—The observing hours at Oxford (the Radcliffe Observatory) are 8 a.m., noon and 8 p.m. The results given under Barometer and Hygrometer are the means of the observations at these hours reduced to the means for 9 a.m. and 9 p.m. by corrections deduced from a discussion of the Photographic Continuous Records. (See *Radcliffe Observations*, Vols. XXXIX. to XLV.) The averages used at Oxford are based on observations as follows: Rain, 86 years, 1815–1900; Temperature, 73 years, 1828–1900; Sunshine, 20 years, 1881–1900.

At Greenwich and Oxford the daily rainfall amounts are those for the 24 hours comprising the civil day. At other stations the amounts are those for the 24 hours ending at the time of morning observation; they are entered to the day preceding that of observation.

* The hours of Observation are 9 a.m. and 9 p.m. local time, with the following exceptions. At the stations marked

For all the stations marked a, b, and c, the results under Barometer, Hygrometer and Cloud are based on the mean for districts. For the station marked c, and for Camden Square, where the wind and cloud are not observed at 9 p.m. order to make them more readily comparable with the results for other stations. They, as well as the numbers of clouds, † The averages used are obtained from observations extending over 35 years, namely:—For Rainfall, 35 years, 1871–1905; Sunshine, 15 years.)

† At the Royal Observatory the earth temperature is taken at 3 feet 2 inches below the surface; at this station the numbers for the 4th Quarter as thus calculated, are respectively Clear Sky 0, 0, 0, and Overcast 1, 5, 4. See Note on page 187.

See Footnote, p. 79.

Wind Force.—Beaufort Scale (0–12) is used. The number of observations of moderate and strong wind (force 4 and over) is given in the last column.

* At Oxford the observations are taken at 8 a.m., noon, and 8 p.m., see Note on page 79. At all the other stations of Observation are 9 a.m. and 9 p.m. local time, with the following exceptions. At the stations marked :

For all the stations marked a, b, and c, the results under Barometer, Hygrometer and Cloud are based on the for districts. For the station marked c, the results for Wind, Direction and Number of Observations of Moisture are based on the results for the district.

† The averages used are the number of days of "Clear Sky" and "Overcast" at this station, are printed in the table.

‡ At Belvoir Castle the earth temperature is taken at 3 feet below the surface.

§ See Footnote p. 79.

Wind Force.—Beaufort Scale (0-12) is used. The number of observations of moderate and strong wind (10-12) is given in the table.

* The hours of Observation are 9 a.m. and 9 p.m. local time, except at the stations marked a, the results under Barometer, Hygrometer and Cloud are based on the mean of districts.

† The averages used are obtained from observations extending over 35 years, namely:—For Rainfall, 35 years, 1871 to 1905.

‡ See Footnote p. 79.

Wind Force.—Beaufort Scale (0-12) is used. The number of observations of moderate and strong wind (force 4 and 5) is given.

INDEX OF URBAN DISTRICTS

As constituted on 31st December 1906, together with a reference to the number of the Registration District and Sub-district in which each is situated. See pages 6-69 of this Return.

Urban Districts which are County Boroughs or Municipal Boroughs are indicated by the letters C or M.B. Those Urban Districts marked * have been created, and the boundaries of those marked have been altered since the Census of 1901.

NOTE.—The exact constitution of each Urban District and of each Registration Sub-district is shown in Tables 9 and 12 respectively of the Census County Volumes. Of the 1,166 Urban Districts (including County, Municipal, and Metropolitan Boroughs) 150 were each co-extensive, at the end of December 1906, with one or more Registration Areas.
